1 Introduction

Consultation on Waltham Forest's emerging Local Plan 2 – Site Allocations document took place between Monday 8th November 2021 and Monday 31st January 2022.

The consultation was undertaken in accordance with the Council's [Statement of Community Involvement](#) and in line with the [Town and Country Planning \(Local Planning\) \(England\) Regulations 2012](#).

This report summarises the outcomes of the consultation, and includes a summary of the main issues raised and details of how the Council will take into account the comments received in preparing a subsequent version of the plan.

As required by planning regulations, the version of Local Plan Part 2 - Site Allocations that we published in November 2021 was intended to be submitted to the Secretary of State for independent Examination, along with all of the consultation responses received.

However, following the ongoing examination of Local Plan Part 1 (Spatial Strategy and Planning Policies), we now propose a further review of Local Plan Part 2, followed by another round of Regulation 19 public consultation. This gives us the opportunity to ensure that Local Plan Part 2 aligns with post examination modifications to Local Plan Part 1, continues to address comments made during the consultation summarised in this report and fully reflects the latest evidence base documents, including masterplans and Area Frameworks.

All responses received to the consultation detailed in this report will be submitted to the Secretary of State, along with all responses received to future Regulation 19 consultations.

2 Background

The new Waltham Forest Local Plan comprises two parts. Local Plan Part 1 sets out the spatial strategy for the delivery of the homes, workspace and other social infrastructure that the borough needs over the next 15 years and the development management policies that planning applications will be assessed against. At the time of writing, the Local Plan is being independently examined by Planning Inspectors appointed by the Secretary of State.

Local Plan Part 2 allocates sites across the borough for a range of uses to deliver spatial vision, objectives, and development requirement. Of the sites identified in the document are those the Council expects to come forward for development over the next 15 years. It allocates previously developed sites for a range of uses to deliver spatial vision, objectives and development requirements of the Local Plan 1. The Plan sets out the parameters within which these sites should be redeveloped. A typical allocation includes:

- the site location,
- proposed uses and indicative quantum of development,
- exemplar design and place making expectations and other key planning considerations, and
- estimated future timescales for delivery

Development proposals on site allocations will require full planning permission. By allocating sites for particular purposes, establishing in principle, the land uses that are supported by the Council when sites are allocated. Development will only be recommended for approval when proposals meet all relevant planning policy and achieve exemplar design standards in line with all other development in the borough.

Both parts of the Local Plan will be used to inform decisions on planning applications across the borough. Supplementary Planning Documents, that will support and provide further guidance on the Local Plan, are being prepared and will be subject to a public consultation.

3 Engagement

The Consultation

The Local Plan 2 - Site Allocations; Regulation 19 Consultation initially took place between Monday 8th November 2021 and Friday 14th January 2022. However, as the consultation ran over the Christmas holiday period, it was extended to Monday 31st January 2022.

To comply with Town and Country Planning Act: Regulation 20; copies of each representation must be made available. These are published (with personal information redacted) for viewing in the following appendices:

- Appendix 1: Representations from Statutory Consultees
- Appendix 2: Representations from the Commonplace Engagement Platform
- Appendix 3: Representations received by email and post

Consultation Promotion

Consultation notices were published in the Waltham Forest Guardian and promoted through Waltham Forest News (a Council Publication that is sent to every home in the borough), as well as social media sites such as Facebook, Twitter and Nextdoor. Respondents who had previously engaged with Waltham Forest's Local Plan 1, were notified of the consultation via email.

The information published for all of these events was also available on the Council's user friendly and intuitive Commonplace engagement platform.

Due to a Christmas surge in Covid-19 cases at the time, the Council took precaution and decided to hold all public consultation engagement events as "Zoom" Meetings. These meetings were held on the following dates:

- **North Waltham Forest** 13th December 2021 7-8pm
- **South Waltham Forest** 14th December 2021 7-8pm
- **Central Waltham Forest** 15th December 2021 7-8pm

LP2 Reg 19 Consultation

The Local Plan (LP2) Site Allocations Document consultation has launched. The Site Allocations Document maps out where development might happen across the borough, and how these sites can best meet the needs of local people.

The Regulation 19 stage is more technical than previous consultations, and comments will go directly to the Planning Inspector. This stage requires that consultees answer a specific set of questions which are set out on two forms.

The consultation is open until **Friday 14 January 2022**.

Promotion of 2021 consultation engagement via Waltham Forest News

Publishing of Documents

The following documents were published in support of the consultation:

Local Plan 2 - Site Allocations Document

- [Shaping the Borough – Waltham Forest Local Plan \(LP2\) Site Allocations Document Proposed Submission Document \(Regulation 19\) November 2021 Supporting Documents](#)

Supporting Documents

Sustainability Appraisal

- [LP2 Regulation 19 Non-Technical Summary](#)
- [LP2 Regulation 19 Sustainability Appraisal Report](#)
- [LP2 Sustainability Appraisal Report Appendix A - Review of Relevant Plans, Policies and Programmes](#)
- [LP2 Sustainability Appraisal Report Appendix B - Baseline Data](#)
- [LP2 Sustainability Appraisal Report Appendix C - Site Allocations Assessment](#)
- [LP2 Sustainability Appraisal Report Appendix D - Rejected Sites](#)

Further Supporting Evidence

- [DRAFT LP2 Habitats Regulations Assessment](#)
- [LP2 Equalities Impact Assessment](#)
- [LP2 Local Plan Evidence Base](#)
- [Draft Skyline Study November 2021: Introduction, Methodology and North Waltham Forest Sites](#)
- [Draft Skyline Study November 2021: Central Waltham Forest Sites](#)
- [Draft Skyline Study November 2021: South Waltham Forest Sites 1](#)
- [Draft Skyline Study November 2021: South Waltham Forest Sites 2](#)

During the consultation period the documents were available to view both online here: [Have Your Say: Waltham Forest Local Plan Site Allocations Document](#) and on the Council's interactive online consultation platform (CommonPlace) available at: [Commonplace Engagement Platform](#). Physical copies of the Plan were also made available for inspection at Waltham Forest Town Hall Reception and at Waltham Forest Branch Libraries.

Summary of Online Consultation Events

The timing of the consultation events coincided with the Government's launch of "Plan B" which was put in place following the spread of the omicron variant of COVID-19. Taking a precautionous approach, the Council decided to hold all consultation events as online Zoom meetings. Zoom meetings were held for the South, Central and North of the borough on the following dates:

- **North Waltham Forest** 13th December 2021 7-8pm
- **South Waltham Forest** 14th December 2021 7-8pm
- **Central Waltham Forest** 15th December 2021 7 -8pm

Given the technical nature of Regulation 19 consultation, these events were intended to disseminate the information people needed in order to respond effectively. As such, the consultation events covered the following topics:

- 1) Update on Local Plan Area
- 2) Introduction to Local Plan 2 - Site Allocations Regulation 19 including the changes from the previous version of the document.
- 3) Purpose of the consultation (explanation how a Regulation 19 consultation differs from Regulation 18)
- 4) Scope of consultation – soundness, legal compliance, duty-to-cooperate
- 5) Q&A
- 6) Instructions on how to use the Commonplace platform

North

Key issues raised at the North of the borough meeting were:

- Tall buildings
- Traffic Management
- Housing need
- Land uses
- Infrastructure
- Housing types and tenures
- Concerns about loss of heritage assets
- Employment

Central

The Council had organised an online engagement event for Central Waltham Forest. The engagement event was started and no registered attendees joined the call.

South

- Building Heights
- Placemaking and access to amenity space in sites that have been developed
- Re-provision of leisure facilities
- Affordable and Social Housing on Lea Bridge Station Sites
- Inclusivity and Diversity and understanding of documents for residents where English is not a first language.

Waltham Forest Site Allocations

SHAPING THE BOROUGH - WALTHAM FOREST LOCAL PLAN (LP2) REG 19 (Pre- Submission) SITE ALLOCATIONS DOCUMENT

As a result of feedback from our previous consultation on the Draft Local Plan Site Allocations Document (Regulation 18) we have now progressed the Local Plan Site Allocations Document to the next formal consultation stage known as Regulation 19 (Pre-Submission). The Regulation 19 Local Plan Site Allocations Document is the document that will be submitted to the Planning Inspectorate for Examination in Public. It is the version that the council seeks to adopt, subject to that examination, as the future framework for decision making on planning applications in the borough over the Local Plan Period 2021-2036.

Statutory Consultee Engagement

As stipulated by the Regulation 19 of the Town and Country Planning Act, the Council consulted with the following statutory consultees:

Neighbouring Boroughs and Authorities

- The London Borough of Redbridge
- The London Borough of Newham
- The London Borough of Haringey
- The London Borough of Enfield
- The London Borough of Hackney
- Epping Forest District Council
- The City of London Corporation
- The Lee Valley Regional Park Authority (LVRPA)
- The GLA (Greater London Authority)
- Essex County Council

Other Organisations

- The City of London (Conservators of Epping Forest)
- Canal and River Trust
- Natural England
- Historic England
- Sport England
- Transport for London (TfL)
- TfL Property
- Network Rail
- UK Power Networks

Local Level

- The Highams Park Neighbourhood Planning Group

In order to satisfy legal requirements, the Council has a Duty to Cooperate with the GLA, Neighbouring Authorities and other statutory organisations such as Natural England, Historic England, Sport England, Transport for London and Local neighbourhood planning groups when preparing Local Plans. Throughout the production of Local Plan 2 - Site Allocations the Council met with officers from these organisations and will continue to do so as the document is reviewed. The Council invited all of the Statutory Consultees to respond to the Local Plan 2 - Site Allocations Regulation 19 Consultation in November 2021.

4 Consultation Responses

Summary of responses

A total of 3,246 representations were received during this consultation. This includes a total of 8 responses from our statutory consultees detailed above. A total of 3,202 responses were made on our Commonplace engagement platform and a total of 36 consultation responses were received via email and post. These are summarised below, and the full responses are published in Representations from Statutory Consultees, available in Appendix 1.

Responses from Statutory Consultees

Natural England

At the time of the consultation, Natural England noted that the Council were still awaiting the completion of an Air Quality Mitigation Strategy to assess whether Likely Significant Effects (LSE) on Epping Forest Special Area of Conservation, alone and in combination could be ruled out. Moreover, at this point both the Sustainable Alternative Natural Green Spaces Strategy (SANGs) and Strategic Access Management and Monitoring Strategy (SAMM) were still at a draft stage of preparation. Natural England noted completion of these documents was necessary for sign-off of the Habitats and Regulations Assessment (HRA). Natural England were however, in general agreement with the Direction of Travel (DoT) of the HRA and appreciated that the nature of the work was complex and ongoing.

City of London Corporation: Conservators of Epping Forest

At the time of the consultation, The City of London Corporation, in their role as conservators of Epping Forest were awaiting the Air Quality Mitigation Strategy, SANG strategy, SAMM strategy, and HRA, but with Natural England were generally supportive of the approach being taken. They raised specific concerns about the quantum of development proposed on the following sites:

- SA15 – The Territorial Army Centre
- SA16 – Whipps Cross University Hospital
- SA19 - Tesco and Adjoining Sites, Leytonstone
- SA52 – Motorpoint Sewardstone Road
- SA53 – Lea Valley Motor Company
- SA54 – 60-74 Sewardstone Road
- SA55 – UKPN, Budgens & Gresham Works, North Chingford
- SA56 – Chingford Library and Assembly Hall
- SA57 – North City Autos, Chingford
- SA58 – Royal Epping Forest Golf Club

The Conservators noted that they are committed to continuing to work with colleagues at Waltham Forest to ensure that the integrity of the Epping Forest Special Area of Conservation is sustained.

Lee Valley Regional Park Authority

The Lee Valley Regional Park Authority considered that both the Ice and Waterworks Centres should be included in Local Plan Part 2 - Site Allocations to provide an effective mechanism for their protection. They welcomed the place making plans for SA01 – Leyton Mills and SA02 – New Spitalfields. They also welcomed the inclusion of planning guidelines which highlight the opportunities for onsite ecology and biodiversity but requested further consideration of height in relation to views into the park and up the Lee Valley.

They requested further reference in relation to the Lee Valley Regional Park in relation to SA09 – Low Hall Depot and encouraged provision of open space, urban greening and tree planting to be a requirement rather than an option to be explored. They also considered that there should be a stronger guidance for realising the potential of the Dagenham Brook – for example a river restoration scheme.

They noted that the location of SA52 – Motorpoint and SA53 – Lea Valley Motor Company within the Lee Valley Park Boundary was not mentioned and that both sites sit adjacent to an important east / west route through the park. They also considered that these sites should recognise the proximity of the reservoirs and their SSSI status.

They noted any planning Applications for SA63 North Circular SIL2 and SA69 Blackhorse Lane SIL 3 would need to be accompanied by a project Level Habitats Regulations Assessment to ensure that development would not generate adverse urban effects on the integrity of the Lee Valley. They requested specific references to the Regional Park, including the identification of strategic recreational routes to major leisure sites such as the Lee Valley leisure centre complex and Pickett's Lock.

The Authority noted that for SA72 – Lammas Road SIL 6 and SA73 - Orient Way SIL 7 the Lee Valley Regional Park is erroneously referred to as a planning designation and that provision should be made for green edges and buffer habitats on these sites.

Environment Agency

The response from the Environment Agency noted that the Level 2 Strategic Flood Risk Assessment had been completed and that it was made available as part of this consultation. However, the response also noted that the Level 2 Sequential and Exception Test had not yet been applied to the 20 Site Allocations that are at medium or high risk of flooding.

Thames Water

Thames Water stated that development should lead to no adverse impact on the sites highlighted in their response, noting mitigation measures required where necessary.

Sport England

The response from Sport England set out that their planning objectives are to:

- Protect sports facilities from loss as a result of redevelopment;
- Enhance existing facilities through improving their quality, accessibility and management; and
- Provide new facilities that are fit for purpose and meet demands for participation now and in the future.

They made specific comments on sports provision, raising concerns that certain site allocations would need to be justified in order to be compliant with national policy and avoid significant detrimental implications for existing sports facilities.

London Borough of Redbridge

The London Borough of Redbridge's Consultation Response shows overall support for the approach taken. The representation also indicated support for the inclusion of the placemaking plans and a character-led approach to intensification.

They made site specific comments on the following sites:

- SA01 - Leyton Mills Retail Park
- SA16 – Whipps Cross University Hospital
- SA19 – Tesco and Adjoining Sites, Leytonstone

GLA (Mayor of London & Greater London Authority)

The GLA's response welcomed the use of small sites, noting that they could play a greater role in delivering development - contributing towards the borough's housing need. The principle concern of the GLA response was the approach to industrial land and potential introduction of residential uses on protected industrial sites. It also noted that whilst the mayor is supportive of "stacked" industrial it is unclear whether the sites proposed can accommodate such large and intensified buildings. The response included site specific responses with suggestions made on the industrial sites including Strategic Industrial Land sites.

Transport For London (TfL)

The TfL representation was supportive of the Council's approach to working towards "Vision Zero" and supported the approach of allocating car park sites for car free development across the borough. They asked as to why Public Transport Access Level (PTAL) is no longer included on each site allocation. They made site specific comments on certain sites.

National Grid

The National Grid reviewed the document and made no further comments.

Thematic Analysis

This section presents an analysis of the responses to the consultation by themes.

In addition to the 8 representations received from the statutory consultees, the Council received a total of 3,246 responses from residents comprising of 3,202 electronic responses through the Commonplace Platform, 35 comments by email and 1 comment received by post.

The consultation was run concurrently with consultation on the Chingford Mount Town Centre Area Framework and Leytonstone Town Centre Area Framework. The Council committed to include responses to the Area Framework consultations as part of the relevant Local Plan Part 2 Regulation 19 consultation.

The responses are summarised by Local Plan theme as follows and the full responses are available in Appendix 2: Representations from the Commonplace Engagement Platform and

Total representations by theme

Created with Datawrapper

Appendix 3: Representations made on the Area Framework are in the appendices under copies of representations received by email and post.

Active Travel and Transport

392 Representations were received on the theme of Active Travel and Transport

The sites attracting higher levels of comments on this theme were:

- SA46 Sainsbury's Car Park and Additional Sites
- SA48 Morrisons Supermarket and Car Park
- SA49 Sainsbury's Hall Lane
- SA50 Former South Chingford Library
- SA51 Albert Corner
- SA52 Motorpoint Sewardstone Road
- SA53 Lea Valley Motor Company
- SA54 60-74 Sewardstone Road
- SA55 UKPN, Budgens and Gresham Works
- SA56 Chingford Library and Assembly Hall
- SA57 North City Auto's Chingford
- SA61 Larkwood Leisure Centre and Nursery and the Land to the Rear of Larkwood Leisure Centre

Addressing the Climate Emergency

18 Representations were received on the theme of Addressing the Climate Emergency. The sites attracting higher levels of comments on this theme were:

- SA02 New Spitalfields Market
- SA06 Lea Bridge Station Sites

Decent Homes for Everyone

487 Representations were received on the theme of Decent Homes for Everyone. The sites attracting higher levels of comments on this theme were:

- SA02 New Spitalfields Market
- SA06 Lea Bridge Stations Sites
- SA46 Sainsbury's Car Park and Additional Sites
- SA48 Morrisons Supermarket and Car Park

- SA49 Sainsbury's Hall Lane
- SA50 Former South Chingford Library
- SA51 Albert Corner
- SA52 Motor Point
- SA53 Lea Valley Motor Company
- SA54 60-74 Sewardstone Road
- SA56 Chingford Library and Assembly Hall
- SA57 North City Autos, Chingford
- SA58 Royal Epping Forest Golf Club
- SA59 472 – 510 Larkshall Road
- SA60 Shell Garage, Highams Park
- SA61 Larkwood Leisure Centre and Nursery and the Land to the Rear of Larkwood Leisure Centre

Enhancing the Environment

55 Representations were received on the theme of Enhancing the Environment. The sites attracting higher levels of comments on this theme were:

- SA07 Former Leyton FC Football Ground
- SA46 Sainsbury's Car Park and Adjacent Sites
- SA49 Sainsbury's Hall Lane
- SA64 60-74 Sewardstone Road
- SA61 Larkwood Leisure Centre and Nursery and the Land to the Rear of Larkwood Leisure Centre

Flooding

104 Representations were received on the theme of Flooding. The sites attracting higher levels of comments on this theme were:

- SA02 New Spitalfields Market
- SA06 Lea Bridge Station Sites
- SA48 Morrisons Supermarket and Carpark
- SA52 Motorpoint

Green Infrastructure

556 Representations were received on the theme of Green Infrastructure. The sites attracting higher levels of comments on this theme were:

- SA02 New Spitalfields Market
- SA06 Lea Bridge Station Sites
- SA56 Chingford Library and Assembly Hall
- SA61 Larkwood Leisure Centre and Nursery and the Land to the Rear of Larkwood Leisure Centre

Growth Supported by Infrastructure

274 Representations were received on the theme of Growth Supported by Infrastructure. The sites attracting higher levels of comments on this theme were:

- SA49 Sainsbury's Hall Lane
- SA52 Motorpoint Sewardstone Road
- SA54 60-74 Sewardstone Road
- SA56 Chingford Library and Assembly Hall
- SA61 Larkwood Leisure Centre and Nursery and the Land to the Rear of Larkwood Leisure Centre

Health and Wellbeing

379 Representations were received on the theme of Health and Wellbeing. The sites attracting higher levels of comments on this theme were:

- SA02 New Spitalfields Market
- SA06 Lea Bridge Station Sites
- SA61 Larkwood Leisure Centre and Nursery and the Land to the Rear of Larkwood Leisure Centre
- SA63 Blackhorse Lane SIL3

High Quality Places

1000 Representations were received on the theme of High-Quality Places. The sites attracting higher levels of comments on this theme were:

- SA02 New Spitalfields Market
- SA06 Lea Bridge Stations Site
- SA46 Sainsbury's Car Park and Adjacent Sites

- SA49 Sainsbury's Hall Lane
- SA51 Albert Corner
- SA52 Motorpoint Sewardstone Road
- SA54 60-74 Sewardstone Road
- SA56 Chingford Library and Assembly Hall
- SA59 472-510 Larkshall Road
- SA61 Larkswood Leisure Centre and Nursery and the Land to the Rear of Larkswood Leisure Centre

High Streets and Town Centres

67 Representations were received on the theme of High Streets and Town Centres. The sites attracting higher levels of comments on this theme were:

- SA20 Matalan, Leytonstone
- SA46 Sainsbury's Car Park and Adjacent Sites
- SA48 Morrisons Supermarket and Car Park
- SA49 Sainsbury's Hall Lane
- SA56 Chingford Library and Assembly Hall

Preserving Heritage

52 Representations were received on the theme of Preserving Heritage. The sites attracting higher levels of comments on this theme were:

- SA20 Matalan Leytonstone
- SA50 Former South Chingford Library
- SA56 Chingford Library and Assembly Hall

Promoting the Local Economy

28 Representations were received on the theme of Promoting the Local Economy

The sites attracting higher levels of comments on this theme were:

- SA46 Sainsbury's Car Park and Additional Sites
- SA48 Morrisons Supermarket and Car Park
- SA49 Sainsbury's Hall Lane

Residential Amenity

87 Representations were received on the theme of Residential Amenity

The sites attracting higher levels of comments on this theme were:

- SA46 Sainsbury's Car Park and Additional Sites
- SA48 Morrisons Supermarket and Car Park
- SA49 Sainsbury's Hall Lane
- SA60 Shell Garage Highams Park
- SA61 Larkswood Leisure Centre and Nursery and the Land to the Rear of Larkswood Leisure Centre

Waste Management

23 Representations were received on the theme of Waste Management

The sites attracting higher levels of comments on this theme were:

- SA02 New Spitalfields Market
- SA09 Low Hall Depot
- SA18 Church Lane Car Park Leytonstone
- SA52 Motorpoint Sewardstone Road
- SA54 60-74 Sewardstone Road

Other issues

412 Representations were received on other issues outside of Local Plan Part 2 - Site Allocations. The sites attracting higher levels of comments on other issues were:

- SA02 New Spitalfields Market
- SA09 Low Hall Depot
- SA18 Church Lane Car Park Leytonstone
- SA52 Albert Corner
- SA54 60-74 Sewardstone Road

These other issues included:

Conformity with the Highams Park Neighbourhood Plan.

The Highams Park Neighbourhood Plan is a material consideration in planning applications within the Highams Park Neighbourhood Plan Boundary. The Highams Park Neighbourhood Plan is written to be in general conformity with the London Borough of Waltham Forest's adopted Local Plan.

Support for the Plan

Support for the Local Plan has been noted.

This section presents analysis and represents the proportion of sites that recieved the highest number of responses to the consultation.

Total representations by allocation

- SA02 - New Spitalfields Market
- SA06 - Lea Bridge Station Sites
- SA69 - Blackhorse Lane SIL3
- SA56 - Chingford Library and Assembly Hall
- SA61 - Larkwood Leisure Centre and Nursery and the Land to the Rear of Larkwood Leisure Centre
- SA49 - Sainsbury's Hall Lane
- SA46 - Sainbury's Car Park and Adjacent Sites
- SA52 - Motorpoint, Sewardstone Road
- SA54 - 60-74 Sewardstone Road
- Other sites

Representations on key sites

The consultation identified a number of key sites in the borough that captured more comments than others. These are:

SA02 – New Spitalfields Market:

470 Comments were received on this site focussing on the loss of Green Infrastructure and habitats (due to its proximity to the marshes), concerns over tall buildings and the impact of development on Health and Wellbeing.

SA06 – Lea Bridge Station Sites:

Of the 276 Comments made on this site the majority focussed on concerns surrounding the delivery of High Quality Places, the loss of Green Infrastructure in a more dense urban context and ensuring that the infrastructure is in place to support Health and Wellbeing.

SA69 – Blackhorse Lane SIL3:

There were 250 Comments made on this site focussing on; access to key health service provision, building heights and proximity to the to the Walthamstow Wetlands.

SA56 – Chingford Library and Assembly Hall:

There were 224 comments made on this site raising concerns about building heights and housing affordability. Due to the location of this site within a conservation and next to key heritage assets, comments were made that questioned the potential scale of development. Other concerns were raised about community infrastructure provision.

SA61 – Larkwood Leisure Centre, Nursery and the Land to the rear of Larkwood Leisure Centre:

There were 215 comments made on this site focusing on potential building heights and the impact on the adjacent Larks Wood. Concerns were raised about character and the re-provision of leisure facilities.

SA49 – Sainsbury's Hall Lane:

182 Comments were made on this site, principally around building heights and density. With the proximity to Albert Crescent, comments about heritage were raised. Active Travel and Transport attracted comments including concerns that bus services that served Albert Crescent would be terminated at other, less convenient locations.

SA46 – Sainsbury's Car Park and Adjacent Sites:

There were 148 comments made on this site which centred on the loss of car parking provision. There was concern raised about the potential quantum and height of development and concerns that supermarket provision would be lost. Concerns about over-reliance on public transport were also raised.

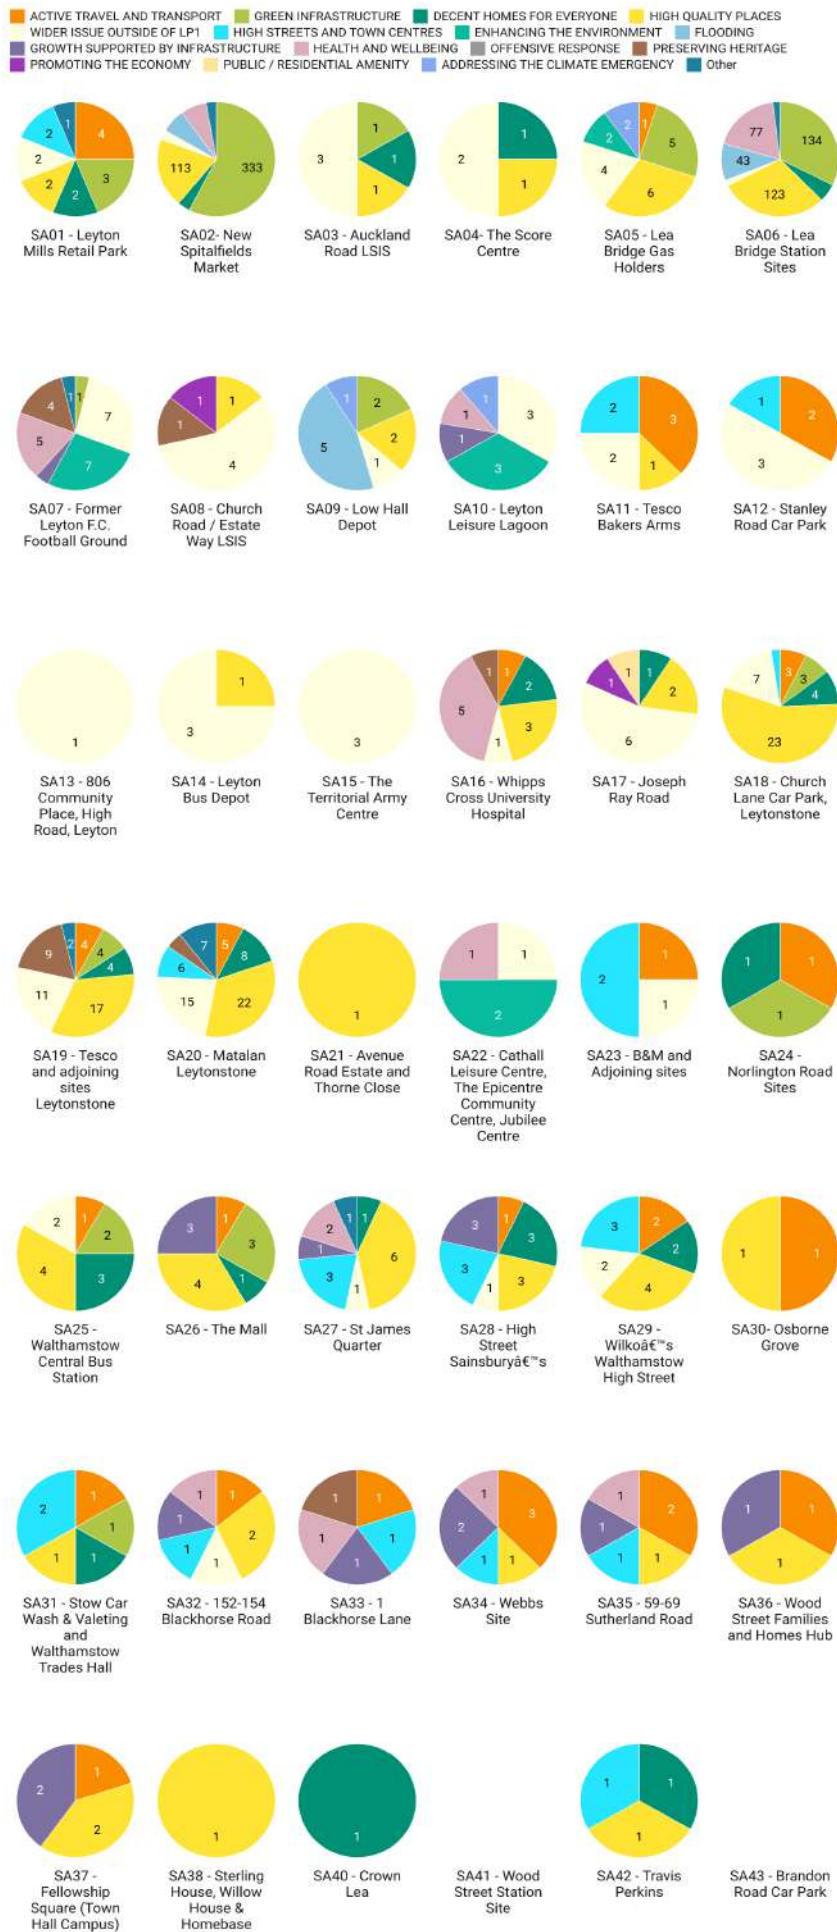

SA52 – Motorpoint Sewardstone Road:

There were 136 comments made on this site focussing on building heights and the impact development on these sites could have on the area. There were also comments made about transport and the pressure on existing infrastructure.

SA54 – 60-74 Sewardstone Road:

111 Comments were made focussing on the lack of parking provision. Other comments were made on the lack of parking provision and concerns about traffic congestion and pressure on existing infrastructure.

Waltham Forest Local Plan 2 Consultation Report 08 November 2021 - 31 January 2022
(Regulation 19 Preferred Submission Version)

Created with Datawrapper

Respondent Analysis

To improve the spread and depth of engagement in future consultations, the Council has analysed the data of the people who responded. This information assists us in shaping our future consultations by helping us to identify if there are any particular communities or groups where engagement is more challenging.

Age profile of respondents

Age

North

In North Waltham Forest there was far greater level of engagement with the consultation generally and the data shows a large range of age groups. The majority of people that engaged with this consultation were aged between 35 and 74 years old. People responding to the consultation from North Waltham Forest were the oldest that engaged with the consultation.

Central

In Central Waltham Forest there was the greatest age range of respondents including with 29 respondents in the 16-24 age category.

South

In South Waltham Forest the majority of respondents did not enter any detail about their age. However, of those who did most were in the 25-34 and 35-44 age ranges. People responding to the consultation from south of the borough were the youngest that engaged with this consultation .

Gender breakdown of respondents

Gender

35%-39% of respondents chose not to disclose their gender as part of this consultation. 31% - 39% of respondents were female and 19%-25% male.

Respondents relationship to the borough

Relationship to the borough

Of those who did comment most, respondents did chose not to disclose their relationship with the borough, but of the respondents who did, most identified themselves as residents. The highest number of people that disclosed that they worked in the borough were from South Waltham Forest.

Map

In the analysis of the consultation Heat Map (next page) we can build a picture of where the people responded to the consultation are from.

North

The highest level of engagement happened in the North of the borough with the majority of responses coming from consultees generally located in the Chingford Green, Endlebury, Larkwood, Highams Park and Valley areas. Around Chapel End there was less engagement.

Central

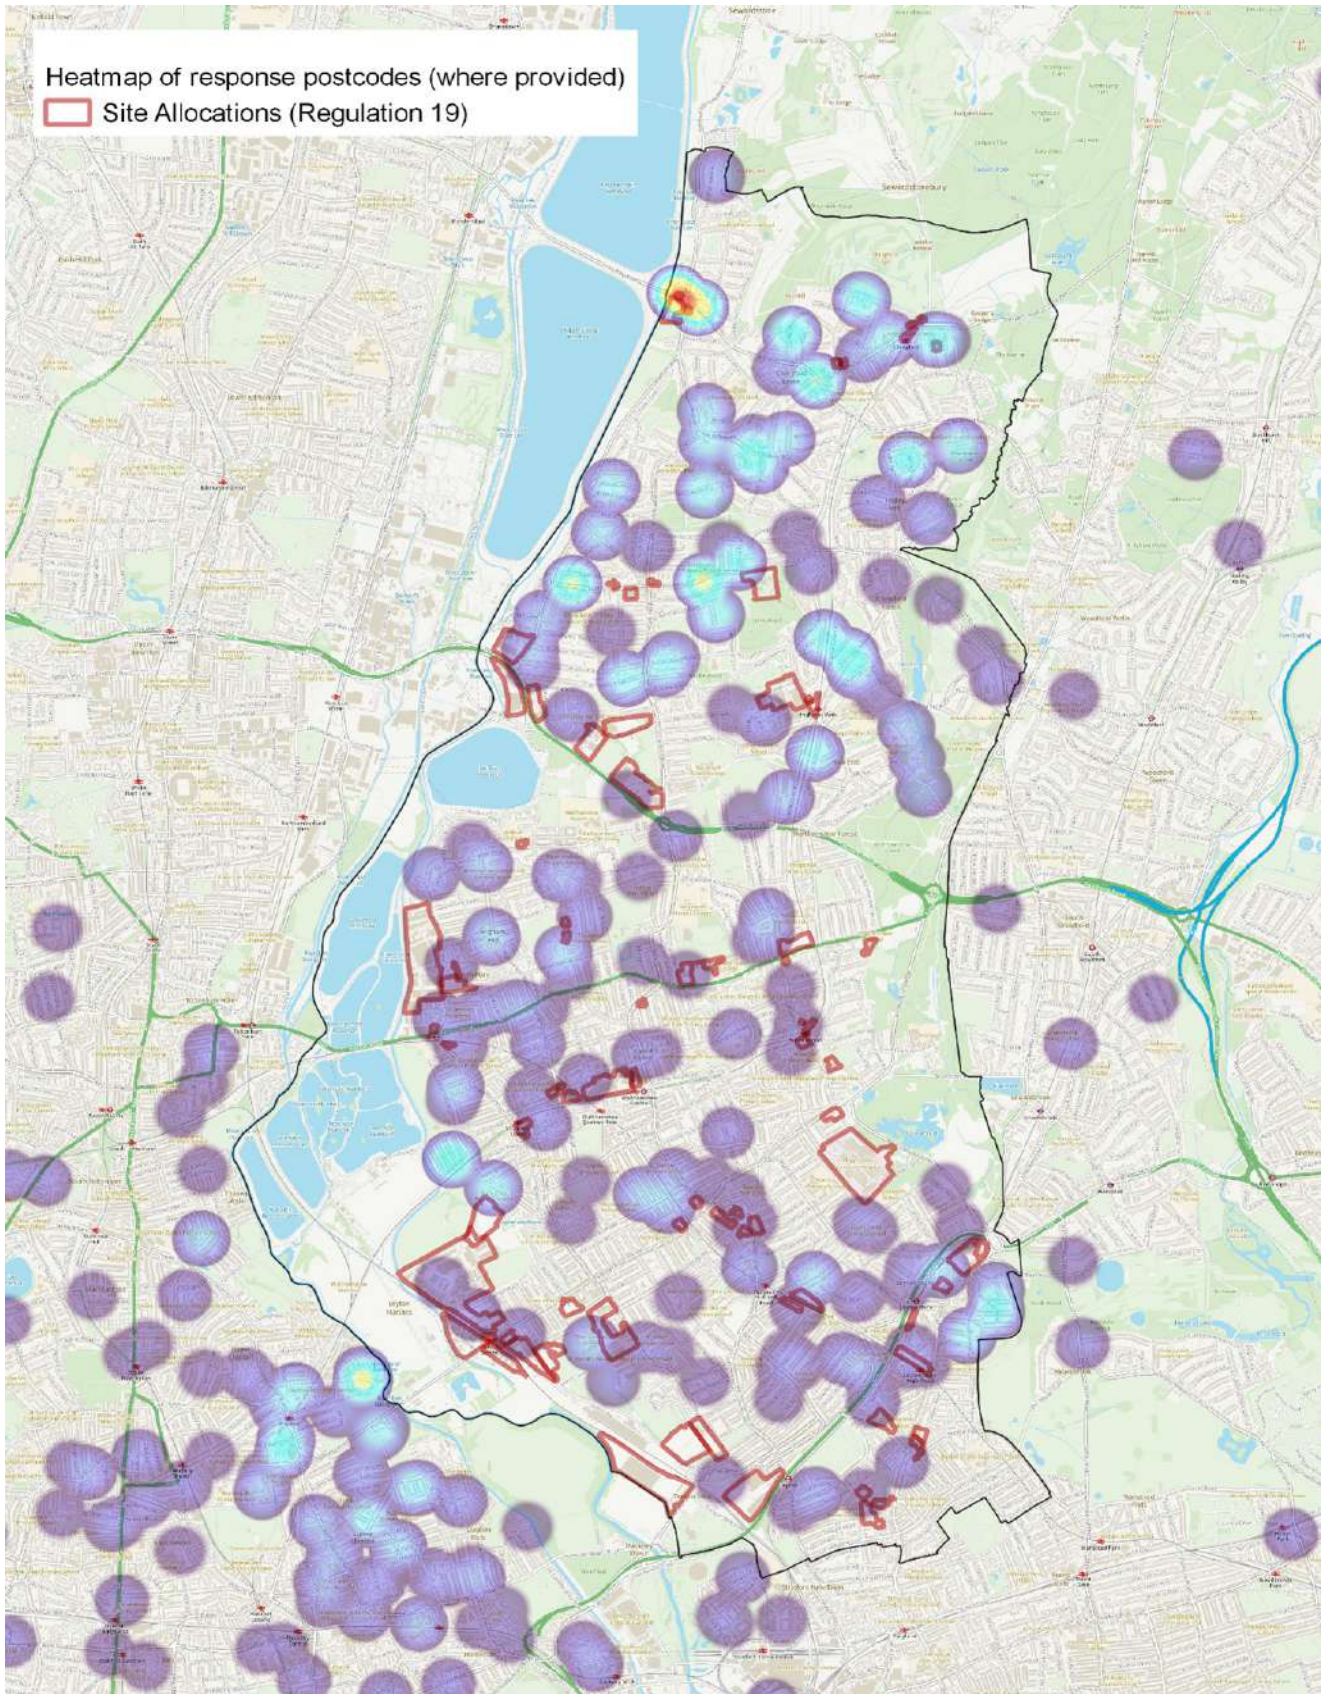

In the Central Areas, the highest levels of engagement took place in the western side of the borough, around the High Street (Including Blackhorse Lane and Blackhorse Road) Markhouse and Lea Bridge areas. Areas in Central Waltham Forest that saw lower engagement were Hoe Street, Wood Street and the Forest Area.

South

In the South of the Borough, most of the engagement took place on the Eastern edge in the Leytonstone and Grove Green Areas. The lowest levels of engagement were around the Leyton, Cathall and Cann Hall areas.

Heatmaps of consultation responses

Below is a heatmap showing where the majority of sites that were responded to and the locations of respondents postcodes

5 Next Steps

In line with the statutory plan making process, the Council intended to submit the version of Local Plan Part 2 - Site Allocations that was consulted on between November 2021 - January 2022 to the Secretary of State for independent examination.

However, following the production of additional evidence to support the examination of Local Plan 1, a revised version of the document is being finalised, which will be subject to a further round of Regulation 19 consultation. The revised version of the Local Plan Part 2 - Site Allocations will fully align with modifications made to Local Plan Part 1 during examination, and the latest evidence base documents, including masterplans and Area Frameworks. Revised versions of the accompanying Sustainability Appraisal (SA) and Habitats Regulation Assessment (HRA) will also be prepared.

In line with the statutory plan making process, all representations from both rounds of consultation will be submitted with the Plan for independent examination.

Dear Sir/Madam,

Planning consultation: Waltham Forest Local Plan (LP2) – Site Allocations and associated Habitats Regulations Assessment

Thank you for your consultation on the above dated 08 November 2021 which was received by Natural England on the same date.

Natural England is a non-departmental public body. Our statutory purpose is to ensure that the natural environment is conserved, enhanced, and managed for the benefit of present and future generations, thereby contributing to sustainable development.

We have reviewed the Site Allocations document alongside the Habitats Regulations Assessment (HRA) Report, and have structured our response around our comments on the HRA. We highlight that our response to these documents should be read alongside our comments contained in our responses to the Waltham Forest Local Plan (LP1).

Epping Forest SAC

Appropriate Assessment: Air Quality

We are still awaiting the Air Quality Mitigation Strategy, until this has been reviewed and agreed, we cannot assess whether Likely Significant Effect (LSE) alone and in combination can be ruled out. In a recent meeting between Natural England, ClearLead and the London Borough of Waltham Forest we also raised queries over the modelling that has been used to reach the current conclusions within the air quality chapter of the HRA. We acknowledge that air quality impacts and mitigation are a complicated and emerging issue, and will continue to support the London Borough of Waltham Forest to produce a strategy. Without having seen this document, we cannot agree to the current conclusions in the Appropriate Assessment.

Appropriate Assessment: Recreational Pressures

Suitable Alternative Natural Greenspace (SANG)

We are still awaiting a borough wide SANG Strategy, and until we have reviewed and agreed this, we cannot agree with the conclusion of this section that there would be no LSE on Epping Forest SAC (EFSAC) from recreational pressure. We continue to support the London Borough of Waltham Forest in producing this strategy.

We have previously raised that a borough wide SANG Strategy needs to cover all of the allocated housing development coming forward in the borough (27,000 units) in our response to LP2 in December 2020, and that the mechanism for spreading the cost of these measures should be considered by the Council. In our recent response to the MIQs issued by the inspectors in relation to LP1, we suggested that contributions towards the provision of SANGs need to be sought from developments of all sizes. This will then ensure that all developments are avoiding harm to designated sites as well as mitigating it (through the measures discussed below), as there will be SANG provision for all residential developments coming forward.

Strategic Access Management and Monitoring (SAMM)

SAMM contributions are required for all net new dwellings in Waltham Forest. Current SAMM costings are part of the Interim Approach to managing recreational pressure on EFSAC. However, there is currently a draft final version of the Partnership Agreement for a long-term strategic solution, which has been circulated to all the Local Authorities involved, as well as the City of London as the Delivery Body for the mitigation for sign off and we are expecting a start date to this agreement of Spring 2022. We note that there have been changes to the proposed SAMM package (described on page 34 of the document) that forms part of the Strategic Mitigation Strategy since the publication of the Habitats Regulations Assessment for LP2, and that these costings have now been revised, with an 80 year total of £24,817,469.05.

Appropriate Assessment: Urban Effects

Overall, we agree with the conclusions of this section, and the use of SAMM+ measures to reduce both urban effects and recreational pressure of developments closest to Epping Forest. It is unclear from the HRA whether the SAMM+ Strategy will require a standardised contribution or whether these will be agreed on a bespoke case by case basis. Due to the localised nature of the impacts and mitigation, Natural England would suggest that cases within 400m of the forest need to be considered on a case by case basis, with the LP2 HRA setting out a list of possible SAMM+ measures.

We welcome the inclusion of the paragraph on page 68 of the HRA document that is being put forward for inclusion in the introductory chapters of the Site Allocation Document (LP2) to provide security in terms of Project Level HRAs. However, we would advise that this needs to be updated in line with decisions that are made about contributions and the size of the development. The Zone of Influence for recreational pressure impacts on Epping Forest is 6.2km, and the Strategic SAMM package reflects mitigation for the total quantum of development coming forward, not just all units within 3km and only those over 100 units in the 3-6.2km Zone of Influence. However, it is at the discretion of the LPAs to decide how these contributions are costed across the development coming forward.

SAMM+ Measures

We welcome the inclusion of SAMM+ measures for developments in close proximity to Epping

Forest SAC. However, we note that these SAMM+ measures need to be agreed between Natural England, London Borough of Waltham Forest and the City of London as they cannot fund measures which are part of the wider strategic solution as is currently suggested in Table 7.2 of the Habitats Regulation Assessment. This is to avoid double payment towards some measures, and to ensure that developments in close proximity are providing an adequate level of mitigation over and above the strategic package. We would welcome a discussion with the London Borough of Waltham Forest and the City of London to agree an alternative package of measures, which could then be included in an updated HRA.

Lee Valley SPA and Ramsar

We are broadly in agreement with the conclusions with regards to recreational pressure and urbanisation impacts on Lee Valley SPA and Ramsar, and welcome the changes that have been included based on our comments on previous versions of the HRA.

However, we would highlight concerns mentioned in our response dated the 14th of December 2020 about recreational pressure and the consideration of recreational pressure at project level HRAs for developments in close proximity to the Lee Valley (such as the proposed development at Blackhorse Lane, SA69). Housing developments which are adjacent/near to the Lee Valley SPA and Ramsar should consider contributing to the Walthamstow Wetlands accessibility project. We would continue to welcome a discussion with the council about future funding and plans for Walthamstow wetlands.

Conclusion

Natural England are in agreement with the direction of travel of the HRA, and we are supportive of all the work that has thus far gone into ensuring that there are no adverse effects on designated sites in proximity to the London Borough of Waltham Forest. We appreciate that the complex nature of some

of these issues means that work is still ongoing. However, we are still yet to see several of the key documents underpinning this HRA specifically the Air Quality and SANG Strategies, and without reviewing and agreeing to these, we are unable to agree to the overall conclusions of the HRA.

We look forward to continuing to work with the London Borough of Waltham Forest on the matters we have raised in this response.

If you have any queries relating to the advice in this letter please contact me on 0208 720 0051. Please consult us again once the information requested above, has been provided.

Yours sincerely

End of Draft

Draft Leytonstone and Chingford Mount Frameworks

From: [REDACTED]
Sent: 05 January 2022 11:14
To: regeneration <regeneration@walthamforest.gov.uk>
Subject: Draft Leytonstone and Chingford Mount Frameworks

Dear Regeneration Team,

DRAFT LEYTONSTONE AND CHINGFORD MOUNT FRAMEWORKS

Thank you for consulting Sport England on both Draft Framework documents. Sport England has an established role within the planning system which includes providing advice and guidance on all relevant areas of national and local policy as well as supporting Local Authorities in developing their evidence base for sport.

Sport England aims to ensure positive planning for sport by enabling the right facilities to be provided in the right places based on robust and up-to-date assessments of need for all levels of sport and for all sectors of the community. To achieve this aim our planning objectives are to PROTECT sports facilities from loss as a result of redevelopment, ENHANCE existing facilities through improving their quality, accessibility and management and to PROVIDE new facilities that are fit for purpose and meet demands for participation now and in the future. You will also be aware that Sport England is a statutory consultee on planning applications affecting playing fields. Further detail on Sport England's role and objectives within the planning system can be found via the following link:

<https://www.sportengland.org/how-we-can-help/facilities-and-planning/design-and-cost-guidance/active-design>

Sport England has reviewed the draft documents in light of these planning objectives and national planning policy set out in the National Planning Policy Framework (NPPF) and has the following comments for your consideration that are relevant to both Draft Frameworks:

Active Design

Sport England considers that the design of where communities live, and work is key to keeping people active and placemaking should create environments that make the active choice the easy choice. In light of this Sport England and Public Health England have launched guidance, *Active*

Design, which intends to inform the urban design of places, neighbourhoods, buildings, streets and active open spaces to promote sport and active lifestyles. The guide sets out ten principles to consider when designing places that would contribute to creating well designed healthy communities which has considerable synergy to the placemaking principles, and other aspirations, contained within both Framework documents, particularly in relation to delivering better community facilities, connecting and improving open spaces, facilitating safe and accessible public spaces, facilities and environments, and improving active travel facilities/routes. Sport England recommend that these links between the Draft Frameworks and Active Design are developed further and are really drawn out by having clear references to Active Design, its principles and the Active Design Checklist within the documentation. Links to the Active Design principles and the checklist, for example, could be added to the Frameworks to help future users of the document and demonstrating that the Active Design Principles have been incorporated could form part of the design requirements for development within Chingford Mount and Leytonstone. More information on Active Design, including the guidance, can be found via the following link;

<http://www.sportengland.org/facilities-planning/planning-for-sport/planning-tools-and-guidance/active-design/>

Future Impact on Sport Facilities

The Leytonstone Draft Framework indicates that potentially circa 1,710 new homes could be created within the area. The occupiers of new development, especially residential, will generate demand for sporting provision. The existing provision within the area may not be able to accommodate this increased demand without exacerbating existing and/or predicted future deficiencies. Therefore, Sport England considers that new developments should contribute towards meeting the demand that they generate through the provision of on-site facilities and/or providing additional capacity off-site. The level and nature of any provision should be informed by a robust evidence base such as the Council's Playing Pitch Strategy (PPS) and/or any robust indoor sport facility strategy.

Existing Facilities

Sport England welcomes that the Multi-Use Games Area (MUGA) adjacent to Church Lane Car Park would be re-provided since MUGA's are facilities that provide opportunities for both formal and informal sport and physical activity for local communities. To ensure that this complies with national planning policy this replacement should be of, at least, equivalent quantity and quality as the existing MUGA and in a suitable location.

Although it is not clear if identified in the Council's sport facility strategy/strategies, the intention to improve facilities within Memorial Park is welcomed provided it aligns with Council and sport governing body needs for the area, such as addressing existing deficits or future need.

Sport England is unclear if any other sport facilities are affected by either Draft Framework, if there are these should be protected or replaced if they are not robustly identified as surplus for current

and future needs. This would ensure the Framework(s) is compliant with national planning policy, namely the NPPF, paragraph 99.

If you have any questions or would like any further advice, please do not hesitate to contact me.

Yours Faithfully

Mark Furnish

Planning Manager

Local Plan Part 2 - Site Allocations

From: [REDACTED]

Sent: 07 January 2022 11:47

To: Planning Policy <Planning.Policy@walthamforest.gov.uk>

Subject: Local Plan Part 2 - Site Allocations

Dear Planning Policy Team,

SHAPING THE BOROUGH – WALTHAM FOREST LOCAL PLAN PART 2 SITE ALLOCATIONS

Thank you for consulting Sport England on the above.

As previously stated, Sport England has an established role within the planning system which includes providing advice and guidance on all relevant areas of National and Local Policy as well as supporting Local Authorities in developing their evidence base for sport. Sport England aims to ensure positive planning for sport by enabling the right facilities to be provided in the right places based on robust and up-to-date assessments of need for all levels of sport and for all sectors of the community. To achieve this aim our overriding planning objectives are to:

- PROTECT sports facilities from loss as a result of redevelopment.
- ENHANCE existing facilities through improving their quality, accessibility and management; and
- PROVIDE new facilities that are fit for purpose and meet demands for participation now and in the future.

You will also be aware that Sport England is a statutory consultee on planning applications affecting playing fields. Further detail on Sport England's role and objectives within the planning system can be found at <https://www.sportengland.org/how-we-can-help/facilities-and-planning/planning-for-sport>

Sport England has reviewed the Proposed Site Allocations Document in light of these planning objectives and National Planning Policy set out in the National Planning Policy Framework (NPPF) and is disappointed that none of its comments submitted/issues raised in relation to the previous consultation appear to have been considered and resolved, especially since some proposed site allocations would not be compliant with National and Sport England Planning Policy thereby resulting in the document being unsound in Sport England's view. Although most of Sport England's previous submission is still applicable to the current document it will reiterate/expand its comments as follows:

Unsound Site Allocations

- **SA37 - Fellowship Square (Town Hall Campus)** – Chestnuts Field appears to have had cricket wickets on it in the past therefore Sport England considers this to be a playing field at this stage. The site allocation advocates work to, and loss of, playing field land for development that is not sport development and since the Council's Playing Pitch Strategy (PPS) does not identify this site, or any other site, as surplus then this site allocation would fail to meet the requirement of NPPF, paragraph 99, that advocates playing field land loss only when it is identified as surplus, it is replaced or the works are for sport/recreation facilities the benefits of which outweigh the loss of playing field land. Sport England's Playing Field Policy has a similar stance.
- **SA44 – Priory Court** – The site allocation does state to re-provide community space, but it is not clear if this relates to the existing Multi-Use Games Area (MUGA). In order for this allocation to be compliant with the NPPF, paragraph 99, the MUGA would also need to be provided which should be made clear in the site allocation documentation.
- **SA48 – Morrison's Supermarket and Car Park** – The allocation appears to suggest that the gym/sports facility on site would be lost, and it is not clear if this facility/site/building has been strategically identified as surplus for any of the borough's sporting facility provision need. Again, this appears contrary to the NPPF, paragraph 99. Sport England would like to also highlight that the site is adjacent to Goals Chingford so any adverse impact from noise from this facility should be fully mitigated in any development within this proposed site allocation and not by the Goals Chingford facility, i.e. the Agent of Change principle. It is recommended that this made clear at this stage since it could affect the design of any future proposal on any of the Morrison's site.
- **SA58 - Royal Epping Forest Golf Club** – The site allocation advocates the loss of the club house and maintenance buildings. It is not clear if this has, or will be, replaced or that it is surplus to the operation of the golf course and/or any other sport/recreational use. The loss of these facilities, therefore, would be contrary to the NPPF, paragraph 99 and Sport England Planning Policy.

Unclear if Unsound or Potentially Unsound Site Allocations

- **SA40 – Crown Lea** – The proposed site allocation, which proposes new residential properties, is adjacent to Walthamstow Cricket Club. Any emerging proposals would need to be carefully designed to mitigate the risk of ball strike and it is not clear if an assessment has been undertaken to ensure that this has been taken into consideration before proposing this site allocation. It is likely that Sport England and/or the ECB would seek any applicant/developer to undertake a ball-strike assessment at an early stage and design any scheme to reflect these recommendations therefore it questions whether the Council should have undergone this exercise when considering allocating this site. The assessment, for example, could require a 15 metre tall fence to mitigate the risk of ball strike that could cause issues developing the site whether from an operational, financial or wider planning policy aspect. It is not the responsibility of the cricket club to mitigate any risk which has been created by any development of an adjacent site that introduces sensitive uses adjacent to cricket facilities. (i.e the Agent of Change principle). If the impact from ball-strike is not mitigated, then any sensitive development within this proposed

site allocation could negatively prejudice the use of the adjacent playing field by resulting in restrictions of use for health and safety reasons. Sport England strongly recommends that the Council consider ball-strike risk issues at this stage and potentially consider undertaking a ball-strike risk assessment or express that one is required in the site allocation, so any developer can understand the implications of developing this site.

- **SA46 – Sainsburys Car Park and Adjacent Sites** – The allocation site is adjacent to an Artificial Grass Pitch (AGP) that has sports lighting. The AGP would be used into the evening therefore some of the 430 (or more) residential properties that would be close to the AGP are likely to experience noise and disturbance during this time. Again, referring to the Agent of Change Principle, it is not the responsibility of the AGP's management to mitigate this impact so this should be made clear in the documentation. Sport England object to any proposal that would affect the existing operating hours of an existing facility. Sport England also notes that the site is close to Goals Chingford that also has sports lighting.
- **SA52 - Motorpoint, Sewardstone Road** – The allocation site is adjacent to a playing field that appears to have rugby pitches marked. Sport England would like to highlight that if the allocation site is used for parking to support the rugby pitches/playing field this parking should be retained in any emerging proposals, which does not appear to be the case. The loss of parking would considerably compromise the use of the playing field and result in Sport England objecting to the any scheme that comes forward. If the site does provide parking for the playing field the site allocation should state that this should be provided.

Other Comments

- **SA04 – The Score Centre** – Sport England supports that the existing sports facilities at the site would be re-provided/enhanced. This is considered to align with national policy requirements.
- **SA07 – Former Leyton FC Football Ground** – Although it is unlikely that the playing field has been used in the last 5 years the site does not appear to have been assessed as surplus playing field in the Council's PPS. As a result, the facilities would be needed to help address the Council's future sporting needs. The playing field, and ancillary facilities, would need to be replaced, or retained, in order for this allocation to comply with the NPPF, paragraph 99, and Sport England's Playing Field Policy. Sport England notes that the allocation does state that the sports provision should be re-provided which is welcomed and aligns with the NPPF.
- **SA10 – Leyton Leisure Lagoon, SA22 – Cathall Leisure Centre and SA61 – Larkwood Leisure Centre, Nursery and land to rear of Larkwood Leisure Centre** - As previously noted, these proposed allocations do indicate that the leisure facilities would be replaced. The replacement facilities should, at least, be of equivalent quantity, quality and accessibility otherwise they would be contrary to the NPPF, paragraph 99, and Sport England's Planning Policy
- **SA18 – Church Lane Car Park** – Sport England welcome that the existing MUGA, cycle hub and play spaces would re-provided. On the basis that any reprovision would be, at least, of equivalent quantity, quality and in a suitable location then this proposed site allocation would align with both the NPPF, paragraph 99, and Sport England's Planning Policy.

Overall, Sport England does not consider certain site allocations to be justified and compliant with national policy and could result in significant detrimental implications for existing sports facilities, whether those be facilities on the allocation site or adjacent to the site allocation. As a result, Sport England considers some aspects of the Local Plan Part 2 to be currently unsound. Sport England would happily liaise further with the Council to address the issues raised above to ensure that the allocations would be justified and compliant with national policy and, therefore, sound.

Dear Sir / Madam

Draft Leytonstone Framework November – January 2022 Representations on behalf of National Grid

National Grid has appointed Avison Young to review and respond to local planning authority Development Plan Document consultations on its behalf. We are instructed by our client to submit the following representation with regard to the current consultation on the above document.

About National Grid

National Grid Electricity Transmission plc (NGET) owns and maintains the electricity transmission system in England and Wales. The energy is then distributed to the electricity distribution network operators, so it can reach homes and businesses.

National Grid Gas plc (NGG) owns and operates the high-pressure gas transmission system across the UK. In the UK, gas leaves the transmission system and enters the UK's four gas distribution networks where pressure is reduced for public use.

National Grid Ventures (NGV) is separate from National Grid's core regulated businesses. NGV develop, operate and invest in energy projects, technologies, and partnerships to help accelerate the development of a clean energy future for consumers across the UK, Europe and the United States.

Response

We have reviewed the above document and can confirm that National Grid has no comments to make in response to this consultation.

Further Advice

National Grid is happy to provide advice and guidance to the Council concerning their networks.

Please see attached information outlining further guidance on development close to National Grid assets.

If we can be of any assistance to you in providing informal comments in confidence during your policy development, please do not hesitate to contact us.

Avison Young (UK) Limited registered in England and Wales number 6382509.
Registered office, 3 Brindleyplace, Birmingham B1 2JB. Regulated by RICS

To help ensure the continued safe operation of existing sites and equipment and to facilitate future infrastructure investment, National Grid wishes to be involved in the preparation, alteration and review of plans and strategies which may affect their assets. Please remember to consult National Grid on any Development Plan Document (DPD) or site-specific proposals that could affect National Grid's assets.

We would be grateful if you could add our details shown below to your consultation database, if they are not already included:

Matt Verlander, Director

Avison Young
Central Square South
Orchard Street
Newcastle upon Tyne
NE1 3AZ

Spencer Jefferies, Town Planner

National Grid
National Grid House
Warwick Technology Park
Gallows Hill
Warwick, CV34 6DA

If you require any further information in respect of this letter, then please contact us.

Yours faithfully,

Matt Verlander MRTPI Director
For and on behalf of Avison Young

Avison Young (UK) Limited registered in England and Wales number 6382509. Registered office, 3 Brindleyplace, Birmingham B1 2JB. Regulated by RICS 2

National Grid is able to provide advice and guidance to the Council concerning their networks and encourages high quality and well-planned development in the vicinity of its assets.

Electricity assets

Developers of sites crossed or in close proximity to National Grid assets should be aware that it is National Grid policy to retain existing overhead lines in-situ, though it recognises that there may be exceptional circumstances that would justify the request where, for example, the proposal is of regional or national importance.

National Grid's '*Guidelines for Development near pylons and high voltage overhead power lines*' promote the successful development of sites crossed by existing overhead lines and the creation of well-designed places. The guidelines demonstrate that a creative design approach can minimise the impact of overhead lines whilst promoting a quality environment. The guidelines can be downloaded here: <https://www.nationalgridet.com/document/130626/download>

The statutory safety clearances between overhead lines, the ground, and built structures must not be infringed. Where changes are proposed to ground levels beneath an existing line then it is important that changes in ground levels do not result in safety clearances being infringed. National Grid can, on request, provide to developers detailed line profile drawings that detail the height of conductors, above ordnance datum, at a specific site.

National Grid's statutory safety clearances are detailed in their '*Guidelines when working near National Grid Electricity Transmission assets*', which can be downloaded here: www.nationalgridet.com/network-and-assets/working-near-our-assets

Gas assets

High-Pressure Gas Pipelines form an essential part of the national gas transmission system and National Grid's approach is always to seek to leave their existing transmission pipelines in situ. Contact should be made with the Health and Safety Executive (HSE) in respect of sites affected by High-Pressure Gas Pipelines.

National Grid have land rights for each asset which prevents the erection of permanent/ temporary buildings, or structures, changes to existing ground levels, storage of materials etc. Additionally, written permission will be required before any works commence within the National Grid's 12.2m building proximity distance, and a deed of consent is required for any crossing of the easement.

National Grid's '*Guidelines when working near National Grid Gas assets*' can be downloaded here: www.nationalgridgas.com/land-and-assets/working-near-our-assets

How to contact National Grid

If you require any further information in relation to the above and/or if you would like to check if National Grid's transmission networks may be affected by a proposed development, please visit the website: <https://lsbud.co.uk/>

For local planning policy queries, please contact: nationalgrid.uk@avisonyoung.com

Subject: EA response To Waltham Forest Local Plan Site Allocations Document (LP2) - Regulation 19 Consultation

Dear Planning Policy Team,

Thank you for consulting us on your Regulation 19 Site Allocations and for providing the Level 2 SFRA as a supporting evidence base.

We have reviewed the Level 2 SFRA and there is no evidence that the Sequential Test or Exception Test have been applied in the consideration of the Site Allocations. We therefore find the proposed Site Allocations unsound as they are not justified or supported by an adequate flood risk evidence base.

Please find attached our formal response to the consultation which includes a letter and excel spreadsheet with detailed comments.

If you have any queries or would like to discuss our response please don't hesitate to contact me.

Best Regards,

Tom Craig

Planning Advisor, Hertfordshire and North London Sustainable Places

RESPONSE of THE CITY of LONDON CORPORATION as THE CONSERVATORS of EPPING

FOREST to the LONDON BOROUGH of WALTHAM FOREST DRAFT LOCAL PLAN 2012- 2035 (LP2 Site allocations and associated Habitats Regulations Assessment) PUBLIC CONSULTATION – January 2022.

Thank you for consulting the City of London Corporation, as the Conservators of Epping Forest, on the London Borough of Waltham Forest's (the Borough) Draft Local Plan (LP2) – Site Allocations and associated Habitats Regulations Assessment.

Epping Forest is held as a Charitable Trust by the City of London Corporation and comprises some 6,100 acres (2,500 hectares) of public open space and high tier conservation habitat, **including 1,055 acres (427 hectares) in the Borough**. The Forest is supported by a further 1,800 acres (730 hectares) of Buffer Lands, acquired by the City Corporation to protect the North of the Forest from encroaching development and to maintain the links between the Forest and the wider countryside.

We have reviewed the Site Allocations document received on the 8th November 2022. The Comments of the Conservators below should be read in conjunction with our response to the Waltham Forest Local Plan (LP1).

In our response to the Regulation 19 in December 2020 we advocated a review of the level and locations of growth and suggested that the Local Plan (LP2) should be revised at Regulation 19 in order to reduce likely significant effects on the Epping Forest SAC, as well as the overall heritage landscape of Epping Forest. This revision should also be accompanied by clear, precise, and coordinated SAC mitigation measures that have effect at a strategic level, being Plan-led rather than Project-led.

The Conservators and Natural England still await an Air Quality Mitigation Strategy and a borough wide SANG (Sustainable Alternative Natural Greenspace) Strategy. Without these documents the Conservators cannot be content that secured mitigation measures are in place to rule out Likely Significant Effect (LSE) alone or in combination.

In respect of the proposed site allocations, we are particularly concerned with proposed residential developments within 500m of the Forest boundaries (listed below) in general, as well as the SAC in particular.

Site	New homes (gross)
SA15 - The Territorial Army Centre	130
SA16 - Whipps Cross University Hosptial	1,500
SA19 - Tesco and adjoining sites, Leytonstone	1,110
SA52 – Motorpoint, Sewardstone Road	385
SA53 – Lea Valley Motor Company	15
SA54 – 60-74 Sewardstone Road	40
SA55 – UKPN, Budgens & Gresham Works, North Chingford	15
SA56 – Chingford Library & Assembly Hall	30
SA57 – North City Autos, Chingford	30
SA58 – Royal Epping Forest Golf Club	45
	Total: 3,300

The above table represents a large number of proposed dwellings within a short walking time/distance of the Forest, it is very difficult to mitigate the impacts of recreational pressure that would be likely to occur to such an expansive and appealing site as the Forest. The frequency of visits to the Forest from such close allocations are likely to be disproportionately high compared to allocations further away, especially in the more urban context of the Borough. Without comprehensive and approved SANGS and SAMMS Strategies in place adverse impacts cannot be ruled out.

The Conservators are supportive of the idea and believe it to be appropriate of SAMM+ measures for developments in close proximity to the EFSAC and wider Forest. We would support having an outline list of possible projects in the plan HRA, so they can be assessed as a whole rather than project level HRAs. The Conservators would welcome the opportunity to achieve this through discussions with Natural England and LBWF.

In conclusion, the Conservators continue to work with colleagues in LBWF to ensure that the integrity of the EFSAC is sustained against the impact from future development proposed in the emerging plan. The Conservators await completion of both the Air Quality Mitigation Strategy and the finalised SANG strategy.

Waltham Forest – Proposed Submission Local Plan Part 2 Site Allocations Consultation

Dear Sir/Madam,

I refer to the above consultation on the Proposed Submission Local Plan Part 2 Site Allocations consultation document. Thames Water are the statutory water and sewerage undertaker for the borough and is therefore a “specific consultation body” in accordance with the Town & Country Planning (Local Development) Regulations 2012.

Site Specific Comments

Please find attached site specific comments in relation to water and wastewater infrastructure capacity for the proposed site allocations. In line with Policies 70 and 91 of the Submission Local Plan (LP1) we would welcome early engagement from developers to discuss their infrastructure requirements to help ensure that any necessary water and wastewater network upgrades are delivered as part of an integrated development. This approach will help to minimise the risk of needing to use conditions to ensure that the relevant phase of development is not occupied until necessary upgrades have been delivered thus avoiding potential adverse impacts such as sewer flooding, pollution of land or watercourses or issues of low/no water pressure for customers.

In addition, a number of the sites lie within source protection zones. We would seek to ensure that all developments within source protection zones protect the groundwater quality. This may require planning conditions requiring additional information to be provided on groundwater protection measures if the information is not included at the application stage to ensure that development complies with Policy 91 of the Submission Local Plan (LP1).

Developers can engage in pre-application discussions by contacting us at developer.services@thameswater.co.uk and by using the pre-application advice facility available at: www.thameswater.co.uk. In addition, further advice on groundwater protection issues can be obtained from Thames Waters' Groundwater Resources Team:
email: GroundwaterResources@Thameswater.co.uk

Additional site comments

In addition to the attached comments on sites we would also like to highlight the following comments in relation to individual sites.

Site SA52: 1 Lea Valley Road, London E4 7PX and 51 and 53 Sewardstone Road, Chingford, London E4 7PU

As well as being in a source protection zone this site is located immediately adjacent to an operational Thames Water site. In addition to the general comments on infrastructure capacity in the appended table, any applications for the development of the site should demonstrate that there would be no adverse impact on the amenity of future occupiers from noise, vibrations or light from the operational site. Should mitigation measures be required to ensure this, the proposals should set out how and when any mitigation measures will be delivered to ensure that development complies with Policy 59 of the Submission Local Plan (LP1).

Site SA53: 3 Lea Valley Road, London E4 7PX

As well as being in a source protection zone this site is located close to an operational Thames Water site. In addition to the general comments on infrastructure capacity in the appended table, any applications for the development of the site should demonstrate that there would be no adverse impact on the amenity of future occupiers from noise, vibrations or light from the operational site. Should mitigation measures be required to ensure this, the proposals should set out how and when any mitigation measures will be delivered to ensure that development complies with Policy 59 of the Submission Local Plan (LP1).

Site SA48: 6-7 Salisbury Hall Gardens, London E4 8SN and 2 Morrison Avenue, London E4 8SA

As well as being in a source protection zone this site is located close to the south of operational storm water tanks. In addition to the general comments on infrastructure capacity in the appended table, any applications for the development of the site should demonstrate that there would be no adverse impact on the amenity of future occupiers from noise, vibrations, odour or light from the storm tanks. Should mitigation measures be required to ensure this, the proposals should set out how and when any mitigation measures will be delivered to ensure that development complies with Policy 59 of the Submission Local Plan (LP1).

Site SA70: Argall Avenue SIL 4

As well as being in a source protection zone this site is located close to an existing operational site on Low Hall Lane containing storm tanks. This site is also the subject of a proposed allocation

under SA09. However, should development of site SA70 occur before Site SA09 any applications for the development of the site should demonstrate there would be no adverse impact on the amenity of future occupiers from noise, vibrations, odour or light from the storm tanks, as per the comments made in relation to SA09. Should mitigation measures be required to ensure this, the proposals should set out how and when any mitigation measures will be delivered.

Accordingly, an additional 'Development Guideline' for the proposed allocation should be included:

"Assessment of impact of storm tanks and proposed mitigation strategy if required".

As per the requirement for sites SA09 and SA03, if development is proposed within a zone of influence to the site, which intensifies or introduces a new more sensitive receptor, the proposal must be subject to an Odour Impact Assessment (OIA) based on odour sampling and modelling which must be submitted with the application. If the OIA requires any necessary mitigation to make the development acceptable, this must be funded by the developer in order to protect future users and/or residents' amenity in line with guidance in NPPF and the Agent of Change principle in new London Plan Policy D132.

Site SA03: Auckland Road LSIS

As per the representations made at Regulation 18 stage, Thames Water support the identification of their land within the wider site allocation SA03. Thames Water own and operate the existing Storm Water Tanks located within the centre of the proposed allocation. The allocation site is located within the urban area of Leyton, outside of the Metropolitan Green Belt, and is previously developed land. The site is immediately adjacent to two other proposed strategic allocations: SA04 (Osier Way) and SA05 (The Score Centre), both of which are for predominately residential development, with SA05 also incorporating leisure and community facilities including a doctor's surgery and nursery.

The Regulation 18 consultation version of the plan had a strong requirement for *"Re-provision of a new Thames Water Storm Water facility incorporating underground storm water storage tanks"* which was supported, as re-provision is essential for the comprehensive master planning and eventual delivery of the site.

In this version of the Plan, this has been reduced in impact and the allocation merely requires 'comprehensive master planning' and that 'comprehensive development... is supported', *and* only for the tanks to be dealt with where being directly affected – 'Proposals affecting the Thames Water Flood Tanks should re-provide and improve the infrastructure.'

We oppose this amendment and seek far stronger wording and a requirement that comprehensive master planning of the site be mandatory for the following reasons:

- The tanks are at the centre of the site, therefore any development surrounding them is likely to risk significant amenity issues which would need to be mitigated at the developer's cost. Working comprehensively to relocate the tanks would deliver a far more favourable outcome for all concerned and Thames Water is committed to working with the Council and landowners to facilitate this. This is consistent with the requirements of National planning Policy Framework (NPPF) 2021 paragraph 187 and London Plan 'Agent of Change' principle under policy D13.

- Local Plan Part 1 Policy 5 sets out at part H ii. that development which prejudices future development of a site or the development of a whole site in completeness will be resisted. We consider that this allocation, without the assurances that comprehensive master planning will be pursued, will not be sound or in accordance with the LPP1.

We propose additional wording be added to the 'Site requirements':

“Development proposals will be expected to comprehensively masterplan the site to ensure the storm tanks are relocated prior to any new development.”

We propose the following amendments to the 'Development Guidelines':

“Proposals ***at this site will*** affecting the Thames Water Flood Tanks ***and must*** ~~should~~ seek to re-provide and improve this infrastructure.”

This is justified for the reasons of ensuring the storm tank land can fulfil a significant part in the delivery of the site allocation, it is not stymied by the development of surrounding land coming forward in advance, and that it does not cause unacceptable amenity issues to future users and occupiers.

As a separate point to note, Thames Water have provided a hearing statement to the Examination in Public for the LPP1 which sets out that the tanks should not be included within the 'LSIS' designation as they do not fulfil the purpose nor criteria of LSIS designated land.

Site SA09: Low Hall Depot, Argall Avenue, London E10 7AS

This is partially on TW land on which there are storm tanks and therefore early consultation would be required. There is potential for odour issues at this site. Surface water is expected to be discharged to the watercourse.

As per our response to the Regulation 18 consultation Thames Water support the identification of their land within the wider site allocation SA09. Thames Water own and operate the existing Storm Water Tanks located in the north-eastern corner of the site. The allocation site is located within the urban area, outside of the Metropolitan Green Belt, and is previously developed land. The proposed allocation encompasses a number of currently separate sites and proposes new residential, non-residential floorspace, and the replacement of the Low Hall Depot.

The nature of the function of the existing storm tanks means that relocation is an essential part of the comprehensive master planning and delivery of development of the site. The tanks must be relocated prior to any development taking place in order to protect the amenity of new residents and in order to be consistent with the requirements of National Planning Policy Framework (NPPF) 2019 paragraphs 170 and 180.

The 'Site Requirements' for proposed allocation must therefore be amended to include:

“Re- provision of a new Thames Water Storm Water facility incorporating underground storm water storage tanks”.

Thames Water will continue to work proactively with the Council regarding the redevelopment of the site and the feasibility of relocating the storm tanks elsewhere within the site. In due course, technical and feasibility assessments will be required to inform the development of a comprehensive masterplan for the site. Careful master planning and technical design will be

required to ensure that the relocated storm tanks will not impact unacceptably on the amenities of neighbouring development by virtue of odour, noise or lighting associated with their operation.

Therefore, we also consider that the 'Development Guidelines' for the proposed allocation must therefore be amended to include:

“Comprehensive approach to master planning the site to manage infrastructure requirements and protect future amenity”.

This is also a requirement of Local Plan Part 1 Policy 5F and G that development sites come forward in a coordinated way.

LPP1 Policy 5H part ii. requires that proposed development which prejudices development on a neighbouring site or comprehensive development of the whole site.

Thames Water is a regulated company and any investment that it makes into its assets is ultimately funded via its customers' bills, meaning there is enormous pressure on its investment programme. Whilst it is Thames Water's intention to continue to maintain and enhance the existing storm tanks, there is no business case for Thames Water customers to fund the relocation of the storm tanks. Consequently, the storm tanks will only be relocated if relocation and associated works to address the impacts of the operation of the tanks are facilitated and funded by the redevelopment of the wider site.

If for any reason, any part of the site was to come forward for development prior to the storm water tanks being relocated (which we do not support as set out above), the proposal must be subject to an Odour Impact Assessment (OIA) based on odour sampling and modelling which must be submitted with the application. If the OIA requires any necessary mitigation to make the development acceptable, this must be funded by the developer in order to protect future users or residents' amenity in line with guidance in NPPF and the Agent of Change principle in new London Plan Policy D132.

There are a number of reasons why the site should be dealt with comprehensively to include storm tank relocation. As well as releasing more land and the policy requirement set out in LPP1 and referenced above, it will create a better visual environment and amenity for the surrounding proposed development and for existing residents.

In summary the proposed allocation SA09 is supported by Thames Water subject to:

- the inclusion of a requirement for the storm tanks to be relocated as part of the comprehensive redevelopment of the site; and
- **the relocation of the storm tanks and necessary mitigation to protect the amenities of new residents being facilitated and funded by the comprehensive redevelopment of the site.**

Surface water arising from this site should be discharged into the watercourse.

Site SA04: The Score Centre, 100 Oliver Road, E17 9HL

This site lies adjacent to existing operational storm tanks which form part of Site SA03. Permission has been granted for development of the site subject to conditions including requirements for additional odour modelling and potential mitigation measures.

It may be advisable to consider the strategy for this site in association with the impact of the storm tanks in association with Auckland Road SA03.

I trust that the above comments will be given due consideration.

Yours faithfully,

Phoebe Juggins Thames Water Utilities Limited

Dear Stewart

RE: CONSULTATION ON THE PROPOSED SUBMISSION LOCAL PLAN SHAPING THE BOROUGH: PART 2 SITE ALLOCATIONS DOCUMENT (REGULATION 19 CONSULTATION) - LEE VALLEY REGIONAL PARK AUTHORITY REPRESENTATIONS

Thank you for consulting the Regional Park Authority on the Local Plan Proposed Submission Version Part 2 Site Allocations Document Regulation 19 consultation. A report on this matter was considered by the Authority's Members at the Lee Valley Regeneration and Planning Committee on the 16th December 2021 when the following representations were agreed.

Proposed Submission Version Local Plan Part 2 Site Allocations Document

Lee Valley Ice Centre site and the Waterworks Centre and Car Park

The Authority maintains its position that both the Ice Centre and the WaterWorks Centre should be included as Site Allocations within the Part 2 Local Plan Site Allocations document. Including allocations for these sites would provide an effective mechanism to protect the long term future of these sites and their inclusion should be reconsidered. These allocations would demonstrate that the Plan has been 'positively prepared' enabling the Authority to improve and grow the visitor, sporting and wider cultural offer of the Regional Park for the benefit of local people within the South Waltham Forest strategic growth area and the wider region.

It is recognised that the above sites do not fit the usual template/proforma in that they are leisure sites and designated as MOL. It is also understood that the focus for LP2 is on allocating sites for housing to meet the Council's housing targets. However, the Lee Valley Ice Centre is a major leisure designation and community asset within the Lea Bridge Strategic Location contributing to the local and regional visitor economy, providing opportunities for ice sport, training and leisure activity. The WaterWorks Centre and car park is also a leisure site with potential for redevelopment for other leisure uses in particular visitor accommodation, in line with the Park Development Framework Area proposals.

Further comments on the proposed Site Allocations currently included in the Local Plan Part 2 Proposed Submission document are set out below and relate to sites located both within the Regional Park and adjacent to its boundary. A number of new sites have been included in LP2 which are of relevance to the Regional Park and these have generated a number of comments. For ease of reference, key points are highlighted as representations for consideration.

South Waltham Forest

Sites SA01 Leyton Mills Retail Park and SA02 New Spitalfields Market

The Authority notes and welcomes the additional detail included as part of the site allocations and Placemaking plans for both SA01 and SA02, sites that lie outside the Regional Park but opposite the Lee Valley Hockey and Tennis Centre (LVH&TC). This detail has been informed by the recent work on the 'New Leyton' Development Framework with which officers have been involved. The framework also includes the LVH&TC and the Temple Mills Bus Depot, sites that fall within the LLDC area. It is understood the Framework document will inform a New Leyton Supplementary Planning Document and this will provide more detailed guidance for development. The Authority would wish to be consulted on this document in due course.

The strengthening of proposed site requirements for strategic cycle and pedestrian connections between both sites and the adjoining open spaces and public transport nodes is endorsed, as is the requirement for development to support delivery of a new station at Ruckholt Rd. A new station in this location would significantly improve public transport accessibility for the Lee Valley Hockey and Tennis Centre. The Authority also supports the proposal to "explore a new pedestrian and cyclist bridge link over the railway lines connecting to Eton Manor" from the south of the Leyton Mills retail park. It should be clarified however, that all these measures will improve connectivity to the wider Regional Park as well as the QEOP. **Reference to the Lee Valley Regional Park has been dropped from the current text and should be reinserted.**

The Authority supports the requirement within the Development Guidelines for SA02 that significant public realm and green open space should be provided as part of development, including a new public park with an ecological focus. Given the quantum of development coming forward it is important that each new development is able to provide all the open space, amenity and recreational/leisure needs required by new residents and employees. Whilst the Lee Valley Hockey & Tennis Centre opposite includes areas of public open space and areas of valuable habitat the Authority's primary objectives in relation to the site are to ensure it continues to serve a regional, national and international sporting and leisure market, as well as serving local sporting need in relation to tennis and hockey. It forms part of the QEOP's zone of sporting excellence.

The Authority also welcomes the inclusion of Planning Guidelines which highlight the opportunities for onsite ecology and biodiversity including green buffers, daylighting the culverted river, improving the River Lea habitat, 'wild' public amenity and tree planting. These green and ecological spaces should be located and designed to complement the adjoining Lee Valley Hockey & Tennis Centre to the south and Hackney Marshes to the west. **The guidelines should specify a 'dark corridor' along the sensitive western edge of the site where it borders with the Regional Park and Hackney Marshes in order to enhance the existing wildlife corridor and ecological connectivity.**

Further detail on what the 'potential for height' as noted in the Placemaking Plan might mean would be helpful, given the proximity of these sites to the Regional Park. The Placemaking Plans should also consider views through into both the Regional Park (including views to the north 'up the valley') and the QEOP; maintaining views south through to the VeloPark will be important for example.

Site SO09 Low Hall Depot

The Low Hall Depot allocation sits partially within the Park to the north east of Walthamstow

Marshes. **The Regional Park reference should be included as one of the Planning Designations in the site allocation.** This will relate to draft Policy 84 in the Local Plan Part 1 Strategic Policies.

It is noted that the site capacity has increased from 440 new homes to 700 with 16,400sqm of industrial floorspace (previously 2,500sqm of non-residential floorspace). **Provision of open space, urban greening and tree planting should be a requirement of development.**

Currently the development guidelines only state that provision is to “be explored”. The Placemaking Plan indicates proposed green space and pedestrian and cycle connectivity and specifies a strategic public connection between Low Hall Sports Ground and Low Hall Flood meadows. Providing pedestrian and cycle links to the rest of the Regional Park in line with the PDF Area 2 Proposals is missing however. The Area 2 Proposals highlight the importance of reconnecting the Low Hall area into the rest of the Park at Walthamstow Marshes and improving the provision of facilities for visitors.

The Authority supports the requirement for development to deliver improvements to Low Hall Flood Meadows, provided these safeguard existing ecological value. **Stronger guidance is required to realise the potential of the Dagenham Brook. As previously commented a river restoration scheme should be considered.**

North Waltham Forest SA52 Motorpoint and SA53 Lea Valley Motor Company Lea Valley Rd

The Authority is concerned that although both these sites are located within the Regional Park this fact is not specified within the Planning Designations for the site allocations. **Both sites sit adjacent to an important east west route through the Park and any development should seek to enhance its quality and accessibility.** The Authority’s previous comments highlighted the importance of delivering improvements to this area of the Park in accordance with the PDF Area 5 Visitor proposals. These would include provision of gateway features, combined with traffic calming, the setting back of fencing and the creation of broad pedestrian boulevards to be linked to the Lea Valley Walk and the Pathway Corridor (proposal 5.A.1). These points do not appear to have been addressed. As in the previous version the Placemaking Plan for SA52 retains a reference to the potential for tall buildings on site. **The development guidelines should therefore also recognise the proximity of the King George’s and William Girling Reservoirs and their SSSI status.** These areas sit within the key north south route for bird migration in the Lee Valley and this will need to be considered in relation to any tall buildings and overlooking of the reservoirs.

New Site Allocations SA63 North Circular SIL2 and SA69 Blackhorse Lane SIL3

Both the above site allocations relate to Strategic Industrial Locations (SIL) situated outside but adjacent to the Regional Park boundary. The Authority supports the inclusion of Site Requirements that identify the delivery of green infrastructure and open green space alongside the shared boundaries with the Park. SA69 is located adjacent to Walthamstow Reservoirs SSSI, which forms part of the Lee Valley SPA and Ramsar. Future master planning for this site will need to ensure the inclusion of substantial open and green space as a buffer to development as well as measures to prevent impacts from noise, light, air and water pollution. Draft Local Plan Part 1 Policy 84 Lee Valley Regional Park states under bullet point F) that

“Planning applications for development at Blackhorse Lane will need to be accompanied by a project level HRA to ensure the development will not generate adverse urban effects on the integrity of the Lee Valley SPA and Ramsar. “

The Authority welcomes the inclusion of development guidelines for SA63 that promotes the delivery of strategic cycle and pedestrian connections through the site to link with the wider area including land within the Park and within Meridian Water. **Reference to the Regional Park should be included so it is clear that these connecting routes will provide access to strategic recreational routes such as the Lea Valley Walk and Lee Valley Pathway and to major leisure sites such as the Lee Valley Leisure Complex at Pickett’s Lock.** The Authority’s PDF Area Proposals 4.A.1 include a proposal to develop a linear waterside park around Banbury Reservoir as part of a new visitor hub. The development guidelines identify potential for development to include a circular loop around Banbury Reservoir connecting to William Girling Reservoir so there is scope to explore the potential of this project as part of any future development proposals on this site.

SA70 Argall Avenue SIL 4 and SA71 Rigg Approach SIL5

The north east portion of the Argall Avenue SIL site and all of the Rigg Approach SIL are located within the Regional Park. The Planning Designations section of both Site Allocations should reflect this position. The Authority’s PDF Area 2 Proposals (2.A.3 and 2.A.6 respectively) therefore apply. **For both sites the emphasis for the development guidelines and Placemaking Plans should be to improve pedestrian and cyclists routes, their quality and safety, enhancing and establishing links between sites and through into the Park to the south and west.** The Authority supports the Council in seeking to resurrect ancient routes such as the Black Path where it enters the Park from the north east and passes through the Argall Avenue site and to then establish a route alongside the eastern boundary of the Flood Relief Channel within the Rigg Approach site. This would, as stated need to include improvements to the existing footbridge crossing of the railway to the north of the Rigg Approach site.

Both Placemaking Plans identify the boundary with the Park as a sensitive boundary. The development guidelines need to be clear that improvements along this boundary should secure a scheme to enhance the Flood Relief Channel, its biodiversity value, its landscape and water quality and its recreational amenity as part of a green route through into the rest of the Park.

The Site Requirements should identify improvements to the Lea Bridge Road frontage of the Rigg Approach site under the Site Allocation. The Placemaking Plan indicates Lea Bridge Rd is a 'key frontage' but it is unclear what would be required as part of any future redevelopment. Reference to the PDF Area 2 Proposals for Lea Bridge Rd would be of benefit. These seek to improve the landscape quality of the road and to strengthen the awareness of crossing the park/valley, establishing selective visual connections to the open spaces of the valley to the north and south. **The Authority would wish to ensure the Site Requirements secure the delivery of a coordinated landscape treatment for the road frontage as part of any redevelopment, including directional and entrance signage that creates an entrance point to the Regional Park and the Borough.**

SA72 Lammas Rd SIL6 and SA73 Orient Way SIL7

The Lammas Road industrial estate is located within the Regional Park adjacent to the Lee Valley WaterWorks centre and Nature Reserve. **The Site Allocation should be amended to include the Lee Valley Regional Park as a Planning Designation relevant to this site.** The draft Local Plan Part 1 Policy 84 'The Lee Valley Regional Park' would therefore apply.

The Authority acknowledges that this is a Strategic Industrial location and that development would be expected to provide replacement SIL compliant floorspace capacity. The masterplan process identified as a site requirement should however look to address the relationship of this site to the Regional Park and consider how new industrial development, including the requirement to widen Lammas Road itself, can be delivered that also secures significant improvements to the amenity, ecological integrity and visitor enjoyment of the Regional Park.

The Placemaking Plan and Development Guidelines highlight the sensitive nature of the adjoining parklands and nature reserve. They include a requirement for improved green infrastructure, green space and planting along the boundary with the WaterWorks site. This is welcomed but **the Authority would wish to see sufficient space provided within the Site Allocation to achieve this new green edge and buffer habitat.** Green infrastructure principles should also be applied throughout the site given its location within the Park.

The Authority supports the principle of strategic cycle and pedestrian connections through the site linking to the Rigg Approach and the WaterWorks Centre and parklands together with the enhancement of the quality and safety of existing bridge crossings over the railway. **However, the detail of these routes and connections into existing pathways would need to take account of the Authority's own proposals for the Park and future plans for the WaterWorks Centre.**

The Orient Way SIL Site Allocation is set back some distance from the Regional Park behind Lammas Rd and Orient Way itself. **However, the development guidelines should ensure that the creation of green and biodiverse corridors along the site boundaries with Orient Way connect with similar provision and green infrastructure on the adjacent Lammas Rd site and link through to the Regional Park.**

The Authority has raised a number of detailed points above in relation to those site allocations within or adjacent to the Park, particularly the new industrial locations. It is hoped that these detailed comments can be addressed through modification to the Proposed Submission version of LP2 in consultation with officers and as part of preparing the documents for examination. It is important to note however that the Authority would consider the LP2 document unsound if it does not reference the Regional Park as a Planning Designation within the Site Allocations that are situated within the Park. This would improve the effectiveness of the LP2 Site Allocations in delivering the Council's objectives for each area and the Regional Park.

The Authority looks forward to engaging further with Borough officers on the final stages of preparing the LP2 Site Allocations document for examination as part of the Duty to Co-operate process and would wish to be kept informed regarding engagement with the examination process in due course.

Yours sincerely

A handwritten signature in black ink, appearing to read 'Claire Martin', with a date '2/14' written below it.

WALTHAM FOREST LOCAL PLAN PART 2 SITE ALLOCATIONS

From: Mark Furnish

Sent: 07 January 2022 11:47

To: Planning Policy

Subject: Local Plan Part 2 - Site Allocations

Dear Planning Policy Team,

SHAPING THE BOROUGH – WALTHAM FOREST LOCAL PLAN PART 2 SITE ALLOCATIONS

Thank you for consulting Sport England on the above.

As previously stated, Sport England has an established role within the planning system which includes providing advice and guidance on all relevant areas of National and Local Policy as well as supporting Local Authorities in developing their evidence base for sport. Sport England aims to ensure positive planning for sport by enabling the right facilities to be provided in the right places based on robust and up-to-date assessments of need for all levels of sport and for all sectors of the community. To achieve this aim our overriding planning objectives are to:

- PROTECT sports facilities from loss as a result of redevelopment;
- ENHANCE existing facilities through improving their quality, accessibility and management; and
- PROVIDE new facilities that are fit for purpose and meet demands for participation now and in the future.

You will also be aware that Sport England is a statutory consultee on planning applications affecting playing fields. Further detail on Sport England's role and objectives within the planning system can be found at <https://www.sportengland.org/how-we-can-help/facilities-and-planning/planning-for-sport>

Sport England has reviewed the Proposed Site Allocations Document in light of these planning objectives and National Planning Policy set out in the National Planning Policy Framework (NPPF) and is disappointed that none of its comments submitted/issues raised in relation to the previous consultation appear to

have been considered and resolved, especially since some proposed site allocations would not be compliant with National and Sport England Planning Policy thereby resulting in the document being unsound in Sport England's view. Although most of Sport England's previous submission is still applicable to the current document it will reiterate/expand its comments as follows:

Unsound Site Allocations

- **SA37 - Fellowship Square (Town Hall Campus)** – Chestnuts Field appears to have had cricket wickets on it in the past therefore Sport England considers this to be a playing field at this stage. The site allocation advocates work to, and loss of, playing field land for development that is not sport development and since the Council's Playing Pitch Strategy (PPS) does not identify this site, or any other site, as surplus then this site allocation would fail to meet the requirement of NPPF, paragraph 99, that advocates playing field land loss only when it is identified as surplus, it is replaced or the works are for sport/recreation facilities the benefits of which outweigh the loss of playing field land. Sport England's Playing Field Policy has a similar stance.
- **SA44 – Priory Court** – The site allocation does state to re-provide community space but it is not clear if this relates to the existing Multi-Use Games Area (MUGA). In order for this allocation to be compliant with the NPPF, paragraph 99, the MUGA would also need to be provided which should be made clear in the site allocation documentation.
- **SA48 – Morrison's Supermarket and Car Park** – The allocation appears to suggest that the gym/sports facility on site would be lost and it is not clear if this facility/site/building has been strategically identified as surplus for any of the borough's sporting facility provision need. Again, this appears contrary to the NPPF, paragraph 99. Sport England would like to also highlight that the site is adjacent to Goals Chingford so any adverse impact from noise from this facility should be fully mitigated in any development within this proposed site allocation and not by the Goals Chingford facility, i.e. the Agent of Change principle. It is recommended that this be made clear at this stage since it could affect the design of any future proposal on any of the Morrison's site.
- **SA58 - Royal Epping Forest Golf Club** – The site allocation advocates the loss of the club house and maintenance buildings. It is not clear if this has, or will be, replaced or that it is surplus to the operation of the golf course and/or any other sport/recreational use. The loss of these facilities, therefore, would be contrary to the NPPF, paragraph 99 and Sport England Planning Policy.

Unclear if Unsound or Potentially Unsound Site Allocations

- **SA40 – Crown Lea** – The proposed site allocation, which proposes new residential properties, is adjacent to Walthamstow Cricket Club. Any emerging proposals would need to be carefully designed to mitigate the risk of ball strike and it is not clear if an assessment has been undertaken to ensure that this has been taken into consideration before proposing this site allocation. It is likely that Sport England and/or the ECB would seek any applicant/developer to undertake a ball-strike assessment at an early stage and design any scheme to reflect these recommendations therefore it questions whether the Council should have undergone this exercise when considering allocating this site. The assessment, for example, could require a 15 metre tall fence to mitigate the risk of ball strike that could cause issues developing the site whether from an operational, financial or wider planning policy aspect. It is not the responsibility of the cricket club to mitigate any risk which has been created by any development of an adjacent site that introduces sensitive uses adjacent to cricket facilities. (i.e. the Agent of Change principle). If the impact from ball-strike is not mitigated then any

sensitive development within this proposed site allocation could negatively prejudice the use of the adjacent playing field by resulting in restrictions of use for health and safety reasons. Sport England strongly recommends that the Council consider ball-strike risk issues at this stage and potentially consider undertaking a ball-strike risk assessment, or express that one is required in the site allocation, so any developer can understand the implications of developing this site.

- **SA46 – Sainsburys Car Park and Adjacent Sites** – The allocation site is adjacent to an Artificial Grass Pitch (AGP) that has sports lighting. The AGP would be used into the evening therefore some of the 430 (or more) residential properties that would be close to the AGP are likely to experience noise and disturbance during this time. Again, referring to the Agent of Change Principle, it is not the responsibility of the AGP's management to mitigate this impact so this should be made clear in the documentation. Sport England object to any proposal that would affect the existing operating hours of an existing facility. Sport England also notes that the site is close to Goals Chingford that also has sports lighting.
- **SA52 - Motorpoint, Sewardstone Road** – The allocation site is adjacent to a playing field that appears to have rugby pitches marked. Sport England would like to highlight that if the allocation site is used for parking to support the rugby pitches/playing field this parking should be retained in any emerging proposals, which does not appear to be the case. The loss of parking would considerably compromise the use of the playing field and result in Sport England objecting to the any scheme that comes forward. If the site does provide parking for the playing field the site allocation should state that this should be provided.

Other Comments

- **SA04 – The Score Centre** – Sport England supports that the existing sports facilities at the site would be re-provided/enhanced. This is considered to align with national policy requirements.
- **SA07 – Former Leyton FC Football Ground** – Although it is unlikely that the playing field has been used in the last 5 years the site does not appear to have been assessed as surplus playing field in the Council's PPS. As a result, the facilities would be needed to help address the Council's future sporting needs. The playing field, and ancillary facilities, would need to be replaced, or retained, in order for this allocation to comply with the NPPF, paragraph 99, and Sport England's Playing Field Policy. Sport England notes that the allocation does state that the sports provision should be re-provided which is welcomed and aligns with the NPPF.
- **SA10 – Leyton Leisure Lagoon, SA22 – Cathall Leisure Centre and SA61 – Larkswood Leisure Centre, Nursery and land to rear of Larkswood Leisure Centre** - As previously noted, these proposed allocations do indicate that the leisure facilities would be replaced. The replacement facilities should, at least, be of equivalent quantity, quality and accessibility otherwise they would be contrary to the NPPF, paragraph 99, and Sport England's Planning Policy
- **SA18 – Church Lane Car Park** – Sport England welcome that the existing MUGA, cycle hub and play spaces would re-provided. On the basis that any reprovision would be, at least, of equivalent quantity, quality and in a suitable location then this proposed site allocation would align with both the NPPF, paragraph 99, and Sport England's Planning Policy.

Overall, Sport England does not consider certain site allocations to be justified and compliant with national policy and could result in significant detrimental implications for existing sports facilities, whether those be facilities on the allocation site or adjacent to the site allocation. As a result Sport England considers some aspects of the Local Plan Part 2 to be currently unsound. Sport England would happily liaise further with the Council to address the issues raised above to ensure that the allocations would be justified and compliant with national policy and, therefore, sound.

Yours Faithfully

Mark **Furnish**
Planning Manager

Dear Waltham Forest Planning Policy Team,

Waltham Forest Local Plan (LP2) Regulation 19 Allocations Document

Our comments below relate to those proposed site allocations which have strategic or cross-boundary implications and should be read in conjunction with our response to the LP1 consultation.

General Comments

We support the overall approach to the site allocations, specifically the focus on strategic sites; whilst also designating key sites which may be important to a particular area / town centre and using the brownfield land register as a more responsive alternative to formal allocation for small sites.

The inclusion of placemaking plans and an intensification approach based on the appropriate spatial and tall buildings response (which links back to the LP1 Policy 8) is also supported.

Individual Sites

SA01 - Leyton Mills Retail Park

The potential improvements to Leyton Station are welcome. However, there is a need to consider capacity on the Central Line itself, including the timescales of the Central Line upgrades and cumulative development within the London Borough of Redbridge and Epping Forest District.

However, this is primarily an issue of peak time, peak direction passenger flows and this may potentially be alleviated by changes to home working and commuter patterns in the long-term. There appears to have been a change in emphasis from improvements to Leyton Station to the delivery of a new Ruckholt Road station. We understand however that the previously approved £18 million upgrade to Leyton Station may no longer be viable due to TfL's financial position; and a new station may provide greater value and increased benefits.

SA16 - Whipps Cross University Hospital

We note that subsequent to the publication of the Regulation 19 draft, your Planning Committee has resolved to grant planning permission for applications 211244 (the new hospital) and 211245 (the residential development) at Whipps Cross University Hospital; subject to a GLA Stage 2 decision and Section 106 agreements. Whilst the development now has a resolution to grant, the allocation is necessary for housing trajectory purposes and in order to form part of the development plan for reserved matters applications.

The redevelopment of the Whipps Cross Hospital site, with the provision of a new hospital and housing, is supported. The inclusion of commercial and community uses to support the new hospital and residential community is also supported.

This hospital serves much of the western part of Redbridge, and so we will seek continued engagement with ourselves from a health scrutiny and strategic planning perspective. This will include options to improve bus routing and active travel permeability. Some of these travel routes may use the Green Man Roundabout.

In addition to matters regarding healthcare, patient capacity, and service transformation which are outside the scope of the site allocation; previous representations from our Council concerned the poor public transport access and capacity from our borough, improvements to which are needed to facilitate the reduction of car parking within the new hospital.

Our concerns also included potential impacts upon long-range views from the listed Snaresbrook Crown Court complex; we note that the development guidelines list impacts on the setting or views of listed buildings as a consideration and this is supported; noting that detailed design to be considered during the reserved matters stages will have an effect on this potential impact.

A project level HRA has been undertaken to ensure no adverse effect on the Epping Forest SAC. The inclusion of this within the development guidelines is supported.

The new site layout includes the removal of a low footbridge and road widening to enable bus routes through the site. This is supported, as this will enable improved access to the site including from western areas of Redbridge.

SA19 – Tesco and adjoining sites, Leytonstone

Redevelopment of this site is supported. We note that there is a noticeable increase in proposed residential capacity (from 650 to 1100 homes) and commercial floorspace (from 10800 to 14000 sqm) compared to the Regulation 18 draft. This increase will have cross-boundary effects both from the residential population accessing services; but also the catchment area of the re-provided supermarket and other retail / commercial development. Any documents submitted at application stage should examine cross-boundary impacts where relevant – eg Transport Assessment or Retail Impact Assessment.

This proposed increase in site capacity would also increase the potential for adverse effects on Epping Forest SAC. This impact should be clarified / quantified and discussed with Natural England and the Conservators. The site description proposes that measures to minimise access to Epping Forest SAC would be implemented. However, it is not clear how this would be achieved without negative consequences for active travel accessibility.

In order to achieve soundness, we recommend the reference to “minimising access to Epping Forest SAC” should be modified to “*managing* access to Epping Forest SAC”. We recommend discussing these proposals with Natural England in the first instance to ensure any development has minimal future impact on the integrity of Epping Forest SAC.

Duty to Cooperate

We look forward to continued engagement through the Duty to Cooperate, including any updates to our Statement of Common Ground which may be necessary for LP2.

Yours sincerely,

Christopher Waller

Planning Policy Officer

Dear Joe

**Statement of general conformity with the London Plan (Planning and Compulsory Purchase Act 2004, Section 24(4)(a) (as amended);
Greater London Authority Acts 1999 and 2007;
Town and Country Planning (Local Development) (England) Regulations 2012**

RE: Local Plan Site Allocations Document (LP2) (Regulation 19) consultation

Thank you for consulting the Mayor of London on the London Borough of Waltham Forest's (LBWF's) Regulation 19 draft Local Plan Site Allocations Document (LP2). As you are aware, all Development Plan Documents in London must be in general conformity with the London Plan under section 24 (1)(b) of the Planning and Compulsory Purchase Act 2004. The

Mayor has afforded me delegated authority to make detailed comments which are set out below. Transport for London (TfL) have provided comments, which I endorse, and which are attached at Annex 1.

The Mayor provided comments on the earlier Local Plan Part 2: Site Allocations (Regulation 18 consultation) document on 14 December 2020 (Ref: LDD31/LDD17/LP03/HA01). This letter follows on from that earlier advice and sets out where you should make further amendments so that the draft LP2 is consistent with the London Plan 2021 (LP2021). The London Plan 2021 was formally published on the 2 March 2021, and now forms part of LBWF's Development Plan and contains the most up-to-date policies.

The draft Site Allocations Regulation 19 identifies 75 sites to deliver the borough's strategic and planned growth over the Plan period. Twelve of these sites are small sites which is noted and welcomed, but it is considered that the allocation of small sites could potentially play a greater role in supporting small site delivery in accordance with LP2021 Policy H2 and therefore contributing towards meeting the borough's housing needs over the plan period.

As currently written the draft Site Allocations (LP2) Regulation 19 version is not considered to be in general conformity with the LP2021 due to LBWF's proposed approach to the management of its industrial land. Specifically, the divergence of LBWF's LP2 from the LP2021 is centred on the following LP2021 policies:

- Policy E4A – which makes it a requirement that Local Plans should ensure there is a sufficient supply of land and premises to meet current and future demands for industrial and related functions;
- Policy E5B4 – which makes it clear that the release of Strategic Industrial Land (SIL) must be carried out through a planning framework or Local Plan review process and adopted as Policy in a Development Plan; and
- Policy E7B – which is clear that the scope for co-locating industrial uses with residential and other non-industrial uses may be considered within Locally Significant Industrial Sites (LSIS), but not SIL.

London's SILs are set out in Table 6.2 of the LP2021 and are the capital's main reservoir of land for industrial, logistics and related uses. They are given strategic protection in the London Plan because they are critical to the effective functioning of London's economy. However, they may accommodate activities which can raise tensions with sensitive land uses such as residential development.

LBWF's approach to designated industrial land within LP2 would allow for the introduction of residential uses within SILs which, in turn, would lead to their subsequent piecemeal erosion and create hope value. The proposed approach creates an unacceptable level of uncertainty and presents a real risk that the borough would not be able to meet its industrial land needs, in particular for logistics and distribution, over the Plan period and could lead to the uncontrolled loss of SIL that is important to London as a whole. As such, it is considered that the draft LP2 is not in line with the LP2021.

The starting point should be no loss of SIL and no introduction of non-industrial uses within SIL (as set out in LP2021 Policy E7B), , including residential uses, until LBWF has demonstrated its industrial areas can meet its identified need for the full range of industrial uses as set out in LP2021 Policy E4, over the Plan period. The loss of SIL would only then be considered where it is undertaken through

a process of consolidation, intensification and release and supported by sufficient and up-to-date evidence demonstrating that the borough's need for all types of industrial land can be met.

As currently written, the draft Plan proposes the potential introduction of residential uses within SIL but does not propose any SIL release or a re-designation of SIL to LSIS. The site allocations, which allow for the potential introduction of non-industrial uses within SIL are:

- SA63 North Circular SIL 2
- SA69 Blackhorse Lane SIL 3
- SA71 Rigg Approach SIL 5
- SA72 Lammas Road SIL 6
- SA73 Orient Way SIL 7

It is important to reiterate that Policy E7B of the LP2021 makes it very clear that non-industrial uses should not be proposed in any SIL. The proposed loss of SIL at Blackhorse Lane SIL can only be considered acceptable if it is part of a borough-wide strategy to meet the need for all SIL uses within the borough. The council should re-provide, within the borough's other SILs, the capacity lost as part of the redevelopment of Blackhorse Lane SIL.

While the Mayor is aware that the council is considering consolidation of land within other SIL designations, and respective officers have been discussing the approach, this has not yet been set out in a comprehensive borough-wide strategy and there is still insufficient supporting evidence and detail for us to be confident about the necessary re-provision of SIL. The introduction of non-industrial uses in SIL requires the related masterplans to have been agreed by the GLA before they can be included in a Local Plan, if this is the approach that LBWF want to take.

Ambitions for the introduction of any non-industrial uses into SIL in the longer-term should be considered as 'down-grading' of that land to LSIS. In quantitative terms, while this approach may not ultimately result in a numerical loss of industrial capacity, it would result in the effective loss of SIL floorspace, which must be re-provided elsewhere in the borough, or through industrial intensification on the remaining parts of the SIL. The draft Plan fails to provide a sufficient level of detail which illustrates which parts of the SIL would need to formally be released/down-graded to LSIS, how much SIL industrial floorspace would need to be re-provided and where and how the required re-provision would take place. In turn, there is currently a lack of evidence to support the reconfiguration of SIL as part of the draft Plan and to demonstrate that the proposed approach is both realistic and deliverable over the Plan period. In addition to these elements, there is also the requirement that industrial intensification, or re-provision of SIL must happen in advance of SIL being released or downgraded to LSIS. This requirement is clearly set out in Policy E7D2 of the LP2021 and must be followed to ensure that SIL capacity is maintained over the course of the Plan.

It is clear that the draft site allocations document proposes a masterplan by masterplan approach of many industrial sites across the borough. Without detail on many of these masterplans, we are not certain which parts of SIL would formally need to be released, by how much and where SIL capacity might be replaced. There is therefore no assurance that SIL capacity will be maintained across the borough over the life of the plan and that any replacement SIL will be at least of the same quality as that which is lost. As such, LBWF must adopt a plan-led approach which sets out very clearly how the borough intends to reconfigure its industrial land and to ensure with certainty that SIL capacity is provided before it can be released elsewhere.

To summarise, in order to resolve these issues and to ensure the draft Plan is in general conformity with the LP2021, the starting principle is that non-industrial uses should not be introduced into SIL. If the Council is proposing any introduction of non-industrial uses, and therefore the re-designation of SIL to LSIS, this must be justified, and the Council needs to:

- Illustrate precisely where SIL is to be released – this should include all changes to designated industrial land boundary changes in maps/site allocations,
- Illustrate in detail in a masterplan agreed by the GLA where SIL capacity is to be replaced, through intensification or otherwise – within the site allocations,
- Establish that plans for SIL release and re-provision (including intensification) are deliverable and realistic and supported by viability evidence – deliverability considerations would need to include support by the landowner and any intensification such as stacked industrial should in general not have unacceptable impacts on adjoining sites,
- Put robust policy mechanisms in place to ensure that the re-provided or intensified SIL is provided ahead of any subsequent release, to ensure that SIL capacity is maintained across the borough over the Plan period, and
- Establish an appropriate monitoring framework and commit to regularly updating it to ensure that SIL/LSIS and overall industrial capacity across the borough is maintained.

The council has indicated that there are only a few sites within the North Circular and Lea

Bridge areas that the borough is expecting to take (a) all the re-provided SIL capacity from sites where other uses are to be introduced and (b) all the logistics floorspace of 36,000sqm to meet additional need. These areas must therefore clearly and robustly protect SIL uses, including (among others) those for heavier industrial, warehousing and distribution activities, Given the infrastructure required to support these types of uses and the absorption rates for these levels of concentrated SIL use, this is a concern. Whilst in principle the Mayor is supportive of stacked industrial, there is uncertainty whether the proposed sites to be intensified for SIL can accommodate such large and intensified buildings (for example in terms of significant impacts on the amenity of neighbouring properties).

The certainty of SIL re-provision and intensification is also undermined by proposed modification SOPC055¹ (new para 9.55 on policy implementation) to LP1 which is unclear and refers to undefined 'viability or deliverability' considerations as well as 'exceptional circumstances' when master-planning SIL for re-provision and intensification which is not sufficiently explicit or certain.

It should also be noted that LP2 includes several Site Allocations where co-location of nonindustrial uses is proposed within LSIS. It is important that in every case it should be demonstrated that this is considered as part of a plan-led or masterplan process and meet the requirements set out in London Plan policy E7(D).

The table below sets out more specific comments related to individual site allocations.

¹ LPE5: Matter 4 Modifications

GREATERLONDONAUTHORITY

Table 1 – Waltham Forest Site Allocations

Site Ref	Site	Comments
SA02	New Spitalfields Market	Site is currently designated LSIS and this is reflected in the allocation. Welcome the reference to Policy E7 LP2021 in paragraph 3.2.2. The allocation should indicate which parts of the site are most suitable for co-location and could indicate the most suitable co-location typologies. The allocation loosely seeks an uplift in industrial capacity, and set's out what appears to be a baseline industrial capacity figure of 20,500sqm which is useful and is welcomed. The site allocation should make it an absolute requirement that this capacity is maintained as a minimum and could be much clearer what would be expected/required in circumstances where that would not be achievable.
SA03	Auckland Road LSIS	To be consistent with the North London Waste Plan site WAF 8 lies within this site allocation (Leyton Reuse & Recycling Centre). We note that appropriate compensatory waste capacity is sought as part of the proposed site allocation and this is welcomed. But it could also be made explicitly clear that compensatory capacity must be at or above the same level of the waste hierarchy and at least meet, and should exceed, the maximum achievable throughput of the site proposed to be lost, so that it is consistent with Policy SI 9 of the LP2021.
SA08	Church Road/Estate Way LSIS	The site allocation would benefit through clarity that redevelopment of the site should result in the retention of industrial floorspace capacity in accordance with Policy E7 of the LP2021. It is noted that the allocation provides a re-provision capacity baseline figure of 23,529sqm which will be useful in maintaining industrial capacity. In addition, co-location of industrial with non-industrial uses within LSIS must meet the requirements set out in Policy E7D of the LP2021 to ensure that industrial related activities on-site and in surrounding areas are not compromised in terms of their continued effective function, access and service arrangements among others. The allocation should make it clear that intensified industrial, storage and distribution uses are completed in advance of any residential component being occupied and the other elements of Part D of that policy. It is noted that redevelopment of the site should be informed by a master-planned approach, but in the absence of necessary supporting evidence it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the Plan.

SA09	Low Hall Depot	<p>The southern part of the site is SIL, a large part of the site is LSIS and some is not designated as industrial land. Para 3.9.1 suggests that co-location with non-industrial uses could be supported subject to masterplan and 700 new homes are proposed. but it is unclear where which use is envisaged and if the co-location option is meant to apply to the SIL part directly adjacent to the Argall Avenue SIL, which provides a significant proportion of the borough's industrial land. The allocation would benefit from making these designations explicitly clear as each area needs to be treated differently in terms of LP2021 industrial policies, especially in terms of Policy E7. It should also be made clear that non-industrial uses should not be co-located within the SIL part of the designation as this would not be consistent with Policy E7 of the LP2021. Co-location of industrial and non-industrial uses would only be considered acceptable within the part of the site which is LSIS and the non-designated northern part of the site. Redevelopment of the site should be consistent with Policy E7 of the LP2021. The allocation sets out a baseline industrial capacity figure of 16,317sqm but this should be split so that it is clear how much is SIL, how much is LSIS and how much is nondesignated industrial capacity. It is noted that redevelopment of the site should be informed by a master-planned approach, but in the absence of necessary supporting evidence and a clear narrative it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the Plan.</p>
------	----------------	---

SA17	Joseph Ray Road	<p>The entire site is LSIS as reflected in the allocation and this is welcome. It should be made clear that co-location of industrial with non-industrial uses within LSIS must meet all the requirements set out in Policy E7D of the LP2021 including ensuring that industrial related activities on-site and in surrounding areas are not compromised in terms of their continued effective function, access and service arrangements among others. The allocation should also make it clear that intensified industrial, storage and distribution uses are completed in advance of any residential component being occupied. It is noted that redevelopment of the site should be informed by a master-planned approach, but in the absence of necessary supporting evidence it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the Plan.</p>
SA21	Avenue Road Estate and Thorne Close	<p>It is noted that the site allocation is for a comprehensive estate regeneration scheme. It is therefore important that the guidance in Policy H8 of the LP2021 is followed. The allocation would benefit from making it clear that the demolition of affordable housing should not be permitted unless it is replaced by an equivalent amount of affordable housing floorspace and the other elements of that policy. Alternatively, the allocation could simply refer to Policy H8 of the LP2021.</p>
SA24	Norlington Road Sites	<p>The site is non-designated industrial land and as such LBWF could consider designating the site as LSIS in accordance with Policy E6 of the LP2021 to afford the industrial capacity here greater protection. The site allocation would benefit from reference to Policy E7D of the LP2021 which makes it clear that mixed-use proposals on non-designated industrial sites which co-locate industrial, storage or distribution floorspace with residential and/or other uses should ensure that industrial and related activities are not compromised in terms of their continued efficient function, access, service arrangements and times of operation; that intensified industrial, storage and distribution uses are completed in advance of any residential component</p>

		being occupied and appropriate design mitigation is provided in any residential element to make it acceptable while allowing industrial activities to effectively function.
SA23	B&M and adjoining sites	This site is currently a part of a larger designated LSIS at Howard Road, which continues to the south. The site allocation doesn't recognise or reflect the site's current LSIS/BEA designation, and this should be corrected. Proposed development for residential and retail uses on this site would result in the loss of industrial capacity which has not been accounted for. The intention to redevelop and introduce non-industrial uses on the site should be done in accordance with Policy E7 of the LP2021, which it currently does not. Any intention to de-designate this site from its current industrial designation should be made explicitly clear in maps to be consistent with LP2021 Policy E7B. Where residential and other non-industrial uses are proposed in LSIS/BEAs these would only be considered acceptable if proposed as part of a co-location approach developed via a masterplan or plan-led process covering the entire designated industrial area in accordance with LP2021 Policy E7 and to ensure that industrial capacity is retained and enhanced.
SA34	Webbs Site	This allocation is part of the larger Sutherland Road LSIS and this should be made clear. Where residential and other nonindustrial uses are proposed in LSIS/BEAs these would only be considered acceptable if proposed as part of a co-location approach developed via a plan-led or masterplan process covering the entire designated industrial area in accordance with LP2021 Policy E7 and to ensure that industrial capacity is retained and enhanced.
SA35	59-69 Sutherland Road	This allocation is part of the larger Sutherland Road LSIS and this should be made clear. Where residential and other nonindustrial uses are proposed in LSIS/BEAs these would only be considered acceptable if proposed as part of a co-location approach developed via a plan-led or masterplan process covering the entire designated industrial area in accordance with LP2021 Policy E7 and to ensure that industrial capacity is retained and enhanced.
SA39	Hylands Road Phase 1 and 2	It is noted that the site allocation is for a comprehensive estate regeneration scheme. It is therefore important that the guidance in Policy H8 of the LP2021 is followed and reflected in the allocation. The allocation would benefit from making it clear that the demolition of affordable housing should not be permitted unless it is replaced by an equivalent amount of affordable housing floorspace and the other elements of that Policy. Alternatively, the allocation could simply refer to Policy H8 of the LP2021.

SA40	Crown Lea	This is a currently undesignated industrial site. The introduction of residential uses on this site should only be supported in accordance with Policy E7C of the LP2021, where: there is no reasonable prospect of the site being used for industrial and related purposes; or, it has been allocated in an adopted in a local Development Plan Document for residential or mixed use; or, industrial, storage or distribution floorspace is provided as part of mixed-use intensification. LBWF could also consider designating the site as LSIS to afford greater protection to the industrial uses within the site.
SA42	Travis Perkins	The site is occupied by a builders merchant and could be considered to be an undesignated industrial site. In this light, the introduction of residential uses on this site should only be supported in accordance with Policy E7C of the LP2021, where: there is no reasonable prospect of the site being used for industrial and related purposes; or, it has been allocated in an adopted in a local Development Plan Document for residential or mixed use; or, industrial, storage or distribution floorspace is provided as part of mixed-use intensification. LBWF could also consider designating the site as LSIS to afford greater protection to the industrial uses within the site.
SA44	Priory Court	It is noted that the site allocation is for a comprehensive estate regeneration scheme. It is therefore important that the guidance in Policy H8 of the LP2021 is followed. The allocation would benefit from making it clear that the demolition of affordable housing should not be permitted unless it is replaced by an equivalent amount of affordable housing floorspace and the other elements of that Policy. Alternatively, the allocation could simply refer to Policy H8 of the LP2021.
SA47	Cork Tree Retail Park	Hall Lane (SIL) and Cork Tree Retail Park (new LSIS) form one single Site Allocation (SA47). The additional industrial capacity on the Retail Park is welcome, but factors such as for example flood risk and residential uses nearby have to be taken into consideration in determining the type/intensity of the industrial use. The council's plans for this site should be made much clearer: The northern part has the existing SIL designation, and this should be made clear. The new LSIS designation on the southern part of the site should be made clear, too. However, given the integration with the Hall Lane SIL and as proposed in the Employment Land Audit (SIL 1), it is unclear why the Retail Park has not been designated as SIL (or emerging SIL once the industrial capacity is provided) to facilitate their integration. Furthermore, an increase in LSIS capacity is not sufficient to account for the proposed loss of SIL on another sites within the borough.
SA63	North Circular SIL 2	This site is currently designated SIL. The proposed allocation is for the intensification of industrial uses, with the potential introduction of non-industrial uses. No detail is provided about what the latter means and its potential scale, but it could undermine the industrial character and function of the area in both Waltham Forest and Enfield. Non-industrial uses should not be proposed in any SIL, where this has not been set out in a comprehensive strategy and where there is no detailed supporting evidence for the re-provision of SIL floorspace, including how this can be achieved in the light of flood risk constraints. Given the significance of this Site Allocation for additional industrial and logistics land, this is a particular concern. Where non-industrial uses within SIL may still be considered in the longer-term, this should be done through a process of consolidation, intensification and release, i.e. those areas where there is a proposed introduction of non-industrial uses should formally be released from SIL designation and down-graded to LSIS to be consistent with Policy E7 of the LP2021. There should be an intention too, for the

		retention of SIL capacity which should be re-provided elsewhere ahead of release. While the fine details of such a proposal can be provided as part of a masterplan approach, necessary changes to industrial designations and boundary changes must be included as part of LBWF's Development Plan as set out in Policy E7B of the LP2021. In the absence of necessary supporting evidence, it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the Plan. Until the corresponding masterplan has been agreed by the GLA, the Site Allocation should not include the potential to introduce nonindustrial uses in SIL.
SA64	Justin Road/Trinity Way	This site is currently designated LSIS. The intention is to co-locate non-industrial development within the site with an uplift of 9k sqm of industrial capacity. The allocation proposes the introduction of non-industrial uses, which is in accordance with Policy E7 of the LP2021, but there is no detail about the proposed scale of non-industrial land and the re-provision considerations. The proposal would only be considered acceptable if brought forward as part of a co-location approach developed via a plan-led or masterplan process covering the entire designated industrial area in accordance with LP2021 Policy E7 and the Mayor's practice note on industrial intensification and co-location through plan-led and masterplan approaches ² and to ensure that industrial capacity is retained and enhanced. The allocation proposes a two-stage masterplan process which is consistent with the Mayor's practice note. In the absence of necessary supporting evidence, it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the Plan.
SA65	Hainault Road	This site is currently designated LSIS. The intention is to co-locate non-industrial development within the site with an uplift of just under 3k sqm of industrial capacity. The allocation proposes the introduction of non-industrial uses in accordance with Policy E7 of the LP2021 , but there is no detail about the proposed scale of non-industrial land and the re-provision considerations. The proposal would only be considered acceptable if brought forward as part of a co-location approach developed via a plan-led or masterplan process covering the entire designated industrial area in accordance with LP2021 Policy E7 and the Mayor's practice note on industrial intensification and co-location through plan-led and masterplan approaches and to ensure that industrial capacity is retained and enhanced. The allocation proposes a two-stage masterplan process with is consistent with the Mayor's practice note. In the absence of necessary supporting evidence it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the Plan.

² https://www.london.gov.uk/sites/default/files/practice_note_-_industrial_intensification.pdf

SA66	Howard Road	This site is currently designated LSIS. The intention is to co-locate non-industrial development within the site with an uplift of about 4.5k sqm of industrial capacity. The allocation proposes the introduction of non-industrial uses in accordance with Policy E7 of the LP2021 , but there is no detail about the proposed scale of non-industrial land and the re-provision considerations. The proposal would only be considered acceptable if brought forward as part of a co-location approach developed via a plan-led or masterplan process covering the entire designated industrial area in accordance with LP2021 Policy E7 and the Mayor’s practice note on industrial intensification and co-location through plan-led and masterplan approaches and to ensure that industrial capacity is retained and enhanced. The allocation proposes a two-stage masterplan process with is consistent with the Mayor’s practice note. In the absence of necessary supporting evidence it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the Plan.
SA67	Barrett Road	This site is currently designated LSIS. The intention is to co-locate non-industrial development within the site with an uplift of 2k sqm of industrial capacity. The allocation proposes the introduction of non-industrial uses in accordance with Policy E7 of the

		LP2021 , but there is no detail about the proposed scale of non-industrial land and the re-provision considerations. The proposal would only be considered acceptable if brought forward as part of a co-location approach developed via a plan-led or masterplan process covering the entire designated industrial area in accordance with LP2021 Policy E7 and the Mayor’s practice note on industrial intensification and co-location through plan-led and masterplan approaches and to ensure that industrial capacity is retained and enhanced. The allocation proposes a two-stage masterplan process with is consistent with the Mayor’s practice note. In the absence of necessary supporting evidence it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the Plan.
SA68	Highams Park Industrial Estate	This site is currently designated LSIS. The intention is to co-locate non-industrial development within the site with an uplift of just under 16k sqm of industrial capacity. The allocation proposes the introduction of non-industrial uses in accordance with Policy E7 of the LP2021, but there is no detail about the proposed scale of non-industrial land and the re-provision considerations. The proposal would only be considered acceptable if brought forward as part of a co-location approach developed via a plan-led or masterplan process covering the entire designated industrial area in accordance with LP2021 Policy E7 and the Mayor’s practice note on industrial intensification and co-location through plan-led and masterplan approaches and to ensure that industrial capacity is retained and enhanced. The allocation proposes a two-stage masterplan process with is consistent with the Mayor’s practice note. In the absence of necessary supporting evidence it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the Plan.

SA69	Blackhorse Lane SIL 3	This site is currently designated SIL. The proposed allocation is for the intensification of industrial uses, with the potential introduction of non-industrial uses and there is a Masterplan at an advanced stage for part this SIL. In the Mayor's statement, submitted as part of the LBWF LP1 examination, we stated that the scale of co-location in the Blackhorse Lane Masterplan, which has to be agreed by the GLA, should be reduced, and the Mayor seeks a clear boundary between the area that is to remain SIL and the area that is to be managed for release to co-location and these points are relevant to this allocation. Where industrial capacity is provided as part of co-location at this site, it cannot count as re-provision of SIL capacity but should be counted as LSIS. It must also be noted that the appropriate acceptable scale of SIL release on this site is intrinsically linked to the amount of SIL capacity that can be realistically re-provided in the boroughs other SILs.
SA70	Argall Avenue SIL 4	Paragraph 3.70.1 states that development will be expected to provide replacement SIL compliant industrial floorspace capacity. Does this refer to replacement SIL as a result of the release of SIL from other sites in the borough? If this is the case, then the areas where SIL is to be released should be made explicitly clear as part of these site allocations. More clarity on this is essential and would remove a significant level of uncertainty. Development guidelines in the allocation highlight that the site is a Schedule 2 Priority Area for new waste management facilities as set out in the North London Waste Plan, and that is welcome, but it should also consider listing this under 'planning considerations' and outline what this means in terms of the implications for future planning applications within this site.
SA71	Rigg Approach SIL 5	This site is currently designated SIL. The proposed allocation is for the intensification of industrial uses, with the potential introduction of non-industrial uses subject to masterplan. There is no detail about what the latter means and its potential scale, but it could undermine the industrial character and function of the area. Non-industrial uses should not be proposed in any SIL, where this has not been set out in a comprehensive strategy and where there is no detailed supporting evidence for the re-provision of SIL floorspace, including how this can be achieved with the complex landownership of the SIL and flooding implications.. Where non-industrial uses within SIL may still be considered in the longer-term, this should be done through a
		process of consolidation, intensification and release. I.e. those areas where there is an introduction of non-industrial uses should be formally released from SIL designation and downgraded to LSIS to be consistent with Policy E7 of the LP2021. There should be an intention too, for the retention of SIL capacity, which should be re-provided ahead of release. While the details of such a proposal can be provided as part of a masterplan approach, necessary changes to industrial designations and boundary changes must be included as part of LBWF's Development Plan as set out in Policy E7B of the LP2021. In the absence of necessary supporting evidence, it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the Plan. Until the corresponding masterplan has been agreed by the GLA, the Site Allocation should not include the potential to introduce non-industrial uses in SIL.

SA72	Lammas Road SIL 6	<p>This site is currently designated SIL. The proposed allocation is for the intensification of industrial uses, with the potential introduction of non-industrial uses subject to masterplan. There is no detail about what this means and its potential scale, but it could undermine the industrial character and function of the area. Non-industrial uses should not be proposed in any SIL, where this has not been set out in a comprehensive strategy and where there is no detailed supporting evidence for the re-provision of SIL floorspace, including how this can be achieved with the complex landownership of the SIL and flooding implications.. Where non-industrial uses within SIL may still be considered in the longer-term, this should be done through a process of consolidation, intensification and release. I.e. those areas where there is an introduction of non-industrial uses should be formally released from SIL designation and downgraded to LSIS to be consistent with Policy E7 of the LP2021. There should be an intention too, for the retention of SIL capacity which should be re-provided ahead of release. While the details of such a proposal can be provided as part of a masterplan approach, necessary changes to industrial designations and boundary changes must be included as part of LBWF's Development Plan as set out in Policy E7B of the LP2021. In the absence of necessary supporting evidence, it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the Plan. Until the corresponding masterplan has been agreed by the GLA, the Site Allocation should not include the potential to introduce non-industrial uses in SIL.</p>
SA73	Orient Way SIL 7	<p>This site is currently designated SIL. The proposed allocation is for the intensification of industrial uses, with the potential introduction of non-industrial uses subject to masterplan. There is no detail about what this means, and its potential scale, but it could undermine the industrial character and function of the area. It should also be noted that the Site Allocation is adjacent to the Lea Bridge Gas Holders and Station sites (total ca 900 homes proposed) giving further concern over the potential erosion of the industrial character of the area, in particular to accommodate heavier and logistics uses. Non-industrial uses should not be proposed in any SIL, where this has not been set out in a comprehensive strategy and where there is no detailed supporting evidence for the re-provision of SIL floorspace, especially given the proximity to emerging residential development and flooding implications. Where non-industrial uses within SIL may still be considered in the longer-term, this should be done through a process of consolidation, intensification and release. I.e. those areas where there is an introduction of non-industrial uses should be released from SIL designation and downgraded to LSIS to be consistent with Policy E7 of the LP2021. There should be an intention too, for the retention of SIL capacity which should be re-provided ahead of release. While the details of such a proposal can be provided as part of a masterplan approach, necessary changes to industrial designations and boundary changes must be included as part of LBWF's Development Plan as set out in Policy E7B of the LP2021. In the absence of necessary supporting evidence, it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the</p>
		<p>Plan. Until the corresponding masterplan has been agreed by the GLA, the Site Allocation should not include the potential to introduce non-industrial uses in SIL.</p>

SA74	Deacon Trading Estate (Cabinet Way)	<p>This site is currently designated LSIS. The intention is to co-locate non-industrial development within the site with the intention of providing an uplift of industrial capacity. The allocation proposes the introduction of non-industrial uses in accordance with Policy E7 of the LP2021, but there is no detail about the proposed scale of non-industrial land and the re-provision considerations. The proposal would only be considered acceptable if brought forward as part of a co-location approach developed via a plan-led or masterplan process covering the entire designated industrial area in accordance with LP2021 Policy E7 and the Mayor's practice note on industrial intensification and co-location through plan-led and masterplan approaches and to ensure that industrial capacity is retained and enhanced. The allocation proposes a two-stage masterplan process which is consistent with the Mayor's practice note. In the absence of necessary supporting evidence it is uncertain whether the proposal for this allocation is realistic and deliverable over the lifetime of the Plan.</p>
------	-------------------------------------	---

Next steps

GLA and LBWF officers are working constructively to establish a strategic approach to industrial land that would overcome the Mayor's concerns to LP2 as well as LP1 in advance of their Examinations in Public.

The borough's Development Plan Documents cannot be considered and assessed in isolation. LP1, which is currently undergoing examination, should set out where, spatially within the borough, the majority of the additional employment floorspace (in particular B8) is proposed to be delivered. Currently, we still cannot be sufficiently confident about the deliverability of the proposed industrial intensification and meeting need, in particular, the need for replacement industrial land (SIL) that would also be lost through proposed co-location. Some reassurance regarding viability evidence, the content of the industrial intensification SPD (referred to in LP1) and monitoring arrangements are essential and should be agreed and formalised in a Statement of Common Ground to bring the draft Plan into general conformity with the London Plan³.

The following mitigation is also required through LP2 to provide a coherent and consistent planning framework:

- Given the proposed approach for Blackhorse Lane within the draft Site Allocations, the Mayor seeks a clear boundary between the area that is to remain SIL and the area that is to be managed for release to co-location. Both for the LP1 Proposals Map and LP2, work with the GLA and landowners is required to establish a clear boundary.
- More widely, non-industrial uses should not be proposed in SIL, as this has not yet been set out in a comprehensive strategy and there is no detailed supporting evidence and masterplans agreed by the GLA.

I hope these comments inform the further revision of the Waltham Forest Local Plan Part 2: Site Allocations in preparation for the examination, and we look forward to continuing to engage with you to ensure it aligns with the LP2021 as well as delivering the Council's objectives. If you have any specific questions regarding the comments in this letter, please do not hesitate to contact Hassan Ahmed on 020 7983 4000 or at hassan.ahmed@london.gov.uk.

Yours sincerely

Lucinda Turner

14/01/2022

Dear Sir/Madam,

Waltham Forest Site Allocations Local Plan – Regulation 19 Consultation

Please note that these comments represent the views of Transport for London (TfL) officers and are made entirely on a "without prejudice" basis. They should not be taken to represent an indication of any subsequent Mayoral decision in relation to this matter. The comments are made from TfL's role as a transport operator and highway authority in the area. These comments also do not necessarily represent the views of the Greater London Authority (GLA). A separate response has been prepared by TfL Commercial Development to reflect TfL's interests as a landowner and potential developer.

Thank you for giving Transport for London (TfL) the opportunity to comment on the Regulation 19 consultation for Waltham Forest Site Allocations Local Plan. Since the Regulation 18 consultation, the London Plan has been published and now forms part of Waltham Forest's development plan.

The proposed approach should be consistent with relevant London Plan policy and TfL's aims as set out in the Mayor's Transport Strategy (MTS). In particular, it is important that all site allocations support the Healthy Streets Approach, Vision Zero and the overarching aim of enabling more people to travel by walking, cycling and public transport rather than by car. This is crucial to achieving sustainable growth, as

MAYOR OF LONDON

VAT number 756 2770 08

in years to come more people and goods will need to travel on a relatively fixed road network.

In responding to the Regulation 19 consultation on Waltham Forest Strategic Policies Local Plan in December 2020, we were pleased to note that it included a number of policies and broader themes that support these aims. In particular, we strongly supported the approach to car parking, particularly requiring car-free development across the borough. We encourage you to reflect this approach in the site allocations.

It would also be helpful to confirm that the application of Healthy Streets principles, working towards Vision Zero and a borough mode share of 78% for walking, cycling and public transport by 2041 will be taken into account on a consistent basis. Finally, the need to mitigate any negative impacts on the transport network including during construction, should be emphasised particularly for sites close to transport infrastructure such as rail lines or the Transport for London Road Network (TLRN).

As an update to previous comments we query why the Public Transport Access Level (PTAL) is no longer included for each site allocation. It can provide a useful reference point and will help to justify a requirement for improved connectivity in the form of pedestrian and cycle links and public transport improvements.

Our Regulation 18 comments on specific site allocations and suggestions for additions, amendments or wording improvements are reproduced below.

These are followed by updated comments in response to the Regulation 19 draft which are shown in red. References to policies in the Intend to Publish version of the London Plan (ItPLP) in our Reg. 18 response should now read as references to equivalent policies in the London Plan published in March 2021.

Site allocations

SA1 - Leyton Mills Retail Park – The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward, on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services. In this context TfL notes and supports improved links to Leyton Underground station. These links should be prioritised above connections to a potential new station at Ruckholt Road (see comments under SA2).

SA1 - Leyton Mills Retail Park - The above comments still stand although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity. In addition, we would like to ensure that any proposals for a potential new station at Ruckholt Road and pedestrian and cycle bridge over the rail lines do not cause disruption to the operations of the Lea Interchange bus garage.

There may be a need to consider mitigation for any adverse impacts to existing bus garage capacity which should be re-provided at no cost to the bus operator or TfL.

SA2 - New Spitalfields Market – The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward, on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services.

TfL notes the aspiration to create a new station at Ruckholt Road, but this performed poorly in recent modelling jointly undertaken for the Upper Lee Valley Opportunity Area. A new station may be a longer-term ambition that could be tested through the forthcoming transport strategy to support the New Leyton Development Framework. However, access and capacity improvements at Leyton station (including provision of step free access), alongside improved bus links are likely to be more effective in providing the transport connectivity needed to accommodate proposals for the site. Any funding from the development should be directed towards improvements to Leyton station, bus links and active travel.

Consideration should also be given to accommodating bus garage facilities on the site as part of wider development. There is a need for additional bus garage capacity in the area, particularly if the existing Lea Interchange bus garage is required in the future for alternative rail related uses. As a major generator of employment, the bus garage would help to deliver the minimum 29,798 sqm of replacement employment space proposed for the site in addition to securing adequate space for sustainable travel into the future, as London grows.

SA2 – New Spitalfields Market - We reiterate comments about a new station only being a long-term aspiration and that in the short term more realistic and deliverable proposals to improve connectivity through improved active travel routes should be prioritised. This is even more important in the current funding situation. TfL is unable to commit resources towards works designed to facilitate a new station.

Although we are not in favour of the relocation of Lea Interchange bus garage, as previously stated, we would strongly support a potential co-location on the New Spitalfields Market site if the bus garage had to be relocated; This site represents the best location in terms of its proximity to the existing bus garage and available space and would ensure that bus garage capacity is maintained and enhanced in line with London Plan Policy T3 and emerging London Plan Guidance. There would be an opportunity to minimise disruption to the bus operations, optimise the space on this site and reduce the cost of relocating the bus garage. We consider a bus garage use would fit well with the workspace and creative spaces proposed as part of the replacement employment space footprint. A bus garage would be low impact with a

fully electric fleet and could be totally enclosed with buildings above. However, the optimal access from the west to a new station at Ruckholt Road would bisect the site and conflict with a continuing bus garage use of the whole site.

SA3 – Bywaters, Leyton – The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward, on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services in line with the existing planning consent. The adjoining Score Centre has proposed a segregated cycle way along Auckland Road, and connections to this should be created as part of this development. NOW COMBINED WITH SA4

SA4 - Osier Way - The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward, on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services in line with the draft section 106 agreement which has secured a TfL Healthy Streets contribution. NOW COMBINED WITH SA3

SA3 (combining previous SA3 and SA4) – Auckland Road - The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward, on this site contributions will be required towards the delivery of active travel improvements in line with the section 106 agreement for the Osier Way site which has secured a TfL Healthy Streets contribution. The adjoining Score Centre site has proposed a segregated cycle way along Auckland Road, and connections to this should be created as part of this development.

SA5 - The Score Centre - The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward, on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services in line with the section 106 agreement which has secured a TfL Healthy Streets contribution. A segregated cycle route is being created through extending Auckland Road, and this should be included within the Placemaking Plan.

SA4 – The Score Centre - The above comments still stand although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity.

SA6 – Gas Holders - The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the

quantum of development coming forward, on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services.

SA5 – Gas Holders – The above comments still stand although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity.

SA7 - Lea Bridge station sites 1,2, and 3 – The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward, on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services in addition to the proposed new entrance to Lea Bridge station.

SA6 – Lea Bridge station sites 1,2 and 3 – The above comments still stand although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity. Any development should seek to enhance the existing off-carriageway cycle infrastructure at the site, and maintain it throughout construction.

SA8 – Former Leyton F.C. Football Ground - The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations.

SA8 – Former Leyton F.C. Football Ground – The above comments still stand.

SA9 – Estate Way - The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward, on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services

SA8 – Church Road/Estate Way – The above comments still stand although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity. Improving permeability through this site and to existing residential areas should be a key objective.

SA10 – Low Hall Depot - The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward, on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services.

SA9 – Low Hall Depot – The above comments still stand although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity

SA12 – Tesco Bakers Arms - The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations.

—
SA11 Tesco Bakers Arms – The above comments still stand.

SA15 - Leyton bus garage – TfL notes that this site can only be developed ‘subject to relocation of the bus depot within the borough’. However, this wording needs to be more strongly expressed to ensure consistency with ItPLP policy T3. This requires development plans to safeguard existing land and buildings used for public transport, active travel or related support functions. The proposed wording should acknowledge the need to retain bus garage capacity (c100 buses) to maintain the local bus network which is a major local employer. The site allocation should make it clear that an equivalent or greater capacity (to accommodate future bus growth) must be provided on any replacement bus garage site. Any replacement should be well located in relation to the bus network, suitable for operation 24/7 in order to operate an efficient bus network, and capable of adaptation to house zero emission buses, such as electric or hydrogen in the near future. The new site would need to be operational before the existing site was redeveloped to ensure continuity of operation and TfL approval would be required, along with Stagecoach London who own the current Leyton garage. If it comes forward for residential development, the site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations.

SA14 -Leyton bus garage – The above comments still stand. It is disappointing that the wording has not been amended to reflect the policy on protecting bus garages in London Plan Policy T3 and expanded on in the emerging London Plan Guidance (LPG) on Sustainable, Transport, Walking and Cycling.

Paragraph 4.1.2 of the LPG states that development plans should

a) Safeguard all existing land used for bus operations, including bus stations, garages, stands (and associated driver welfare facilities), depot storage and maintenance space except where TfL have requested (or have formally agreed to) its release or redevelopment. TfL can provide a schedule of sites for safeguarding

b) Require appropriate planning obligations to mitigate impacts on the bus network through enhanced services and supporting infrastructure

c) Highlight the need to retain or increase existing capacity as part of any site allocation that involves bus infrastructure, unless otherwise agreed with TfL

We anticipate that the capacity provided by this site will be required into the future; therefore, we request that the site allocation explicitly requires the retention or increase of existing garage capacity, taking account of future space requirements for a zero emission bus fleet.

—

SA17 Whipps Cross University Hospital – The site allocation should include the need to ensure redevelopment provides for double decker buses and bus standing on the site (currently there is a height restriction which limits the size of vehicles used). Active travel links to Lea Bridge Road should be improved to increase access to public transport services. To support the quantum of development coming forward on this site, contributions will be required towards the delivery of key walking and cycling links and improvements to bus services. Car parking restraint and management should be applied, and the residential development should be car free.

SA16 – Whipps Cross University Hospital – The site is currently the subject of a planning application that is being considered by the Mayor of London. However, the above comments still stand. The bus operations should be supported by agreements covering: the interim arrangements during development, the bringing into use of the new infrastructure, and the subsequent business as usual operation.

SA18 - Joseph Ray Road – The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. TfL strongly supports in principle the intention to provide step free access to Leytonstone High Road Overground station, although this will have to be fully funded as part of the development because we are currently unable to provide TfL funding. Plans for station improvements will need to meet the requirements of TfL London Rail which manages the station.

SA17 – Joseph Ray Road – The above comments still stand. It should be emphasised that although we are supportive of step free access at the station, TfL is not currently in a position to provide any funding towards step free access.

SA19 - Church Lane car park, Leytonstone – TfL strongly supports the redevelopment of car parks in London and a reduction in the overall supply of parking contributes to mode shift and an improvement in conditions for active travel and public transport by reducing car trips. The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. TfL notes and supports the requirement for re-provision of cycle hubs and improved links to Leytonstone Underground station.

SA18 - Church Lane car park, Leytonstone – The above comments still stand.

SA20 – Tesco, Leytonstone – Car parking restraint will be required to any redevelopment of the supermarket in line with ItPLP policy T6.3. The residential development should be car free and well integrated into local walking and cycling

—
networks to facilitate active travel to key destinations. TfL notes and supports the requirement for new cycle and pedestrian routes to the High Street.

SA19 Tesco and adjoining sites, Leytonstone – The above comments still stand and are relevant to the enlarged site.

SA21 – Matalan, Leytonstone – The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. TfL notes and supports the requirement for improved pedestrian and cycle paths.

SA20 – Matalan, Leytonstone – The above comments still stand.

SA22 – Avenue Road Estate and Thorne Close - The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations.

SA21 – Avenue Road Estate and Thorne Close – The above comments still stand.

SA23 – Cathall Road - The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations

SA22 – Cathall Road – The above comments still stand.

SA26 - Walthamstow Central bus station – The redeveloped site should be car free. TfL supports the requirement to ‘Prioritise transport interchange including retaining and upgrading the bus station and a new integrated Underground station entrance’. The aspiration to increase permeability is noted and supported in principle, although potential conflicts between pedestrians and buses should be avoided or limited to formal crossing points. This may require transport modelling. Construction of any development should not encroach or impact existing bus lanes, bus stops or the operation of the bus station. If encroachment is unavoidable, TfL should be consulted at the very early stages of construction logistics planning. The applicant should apply the ‘agent of change’ principle to the bus station. Any application needs to consider how the public realm of the town square relates to the bus station. Furthermore, the layout and design of new development is likely to need to mitigate its impact on a transport interchange that operates on a 24-hour basis. TfL may seek funding to improve access to and from the bus station by passengers such as improving legibility and pedestrian comfort. Links to Walthamstow Central rail station will be particularly important.

—
This site is part owned by TfL and as such, TfL Commercial Development will provide additional comments in their separate response.

SA25 -Walthamstow Central bus station – The above comments still stand.

—

SA27 - The Mall – The redeveloped site should be car free and consistent with ItPLP policy T6.3. TfL notes and supports the proposed new station access from this site. This is currently subject to design and development work. A funding package will need to be secured before any firm commitment can be made to delivery timescales for the station access. We are working with the developer and LBWF officers to ensure that the design meets TfL’s operational requirements and technical specifications.

SA26 - The Mall – The above comments still stand.

SA28 – St James Quarter - The redeveloped site should be car free. The site is adjacent to tracks used by London Overground services and so any proposed development will need to meet the standard requirements for the protection of, and continued access to, rail infrastructure.

SA27 – St James Quarter – The above comments still stand. In addition, although we are supportive of the new requirement for development to deliver step free access at St James Street Overground station, TfL is not currently in a position to provide any funding towards step free access.

We have previously recommended investigating the potential for Cranbrook Mews to be closed to general traffic. The street would likely benefit from a general traffic ban, which would make it accessible only to bikes, buses, local residents and delivery and servicing vehicles genuinely serving local addresses and visiting them for short periods. This may enable a segregated cycle lane to be delivered, which would support Proposal 3 of the Mayor’s Transport Strategy (MTS). Developed in conjunction with suitable lighting and wayfinding signage, a general traffic ban and cycle lane along Cranbrook Mews could also deliver significant improvements against Healthy Streets Indicators in line with Policies T2 (Healthy Streets and D7 (Public Realm) of the London Plan.

SA29 – High Street Sainsburys – The redeveloped site should be car free and consistent with ItPLP policy T6.3

SA28 – High Street Sainsburys – The above comments still stand.

SA33 – 152 – 154 Blackhorse Road - The site is adjacent to tracks used by London Overground services and so any proposed development will need to meet the standard requirements for the protection of, and continued access to, rail infrastructure.

SA32 – 152 – 154 Blackhorse Road – The above comments still stand.

—

SA35- Webbs Site - The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services.

SA36- Webbs Site – The above comments still stand although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity. The reference to car parking in the site requirements should be removed.

SA38 – Town Hall Campus - The redeveloped site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services.

SA37 – Fellowship Square, Town Hall Campus – As part of the planning permission granted in September 2021 a number of transport improvements have been secured. The above comments still stand and should be taken into account in any future applications for the site, although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity.

SA39 – Sterling House, Willow House and Homebase – The redeveloped sites should all be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward on this site, contributions will be required towards the delivery of key walking and cycling links and improvements to bus services. Even if separate applications are submitted, vehicle access for the entire site allocation area should be consolidated, rather than each providing a separate, new access. An application has recently been submitted for the Homebase site. When Sterling House and Willow House come to application in future, they should also be designed for a single vehicular access point to the entire site allocation area, whether using the access provided by the Homebase application, or by providing a new east-west access off Fulbourne Road that all three sites can use. The site is adjacent to tracks used by London Overground services and so any proposed development will need to meet the standard requirements for the protection of, and continued access to, rail infrastructure.

SA38 - Sterling House, Willow House and Homebase – The above comments still stand although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity. As stated, the Homebase application has now been determined and we support the requirement for Sterling House and Willow House to be developed in a comprehensive scheme including shared access for the entire site allocation area.

–

SA42 - Wood Street station site –This site is owned by TfL and as such, TfL Commercial Development will provide comments on this site allocation in their separate response.

SA41 – Wood Street station site – The site allocation requires development proposals to facilitate step free access at the station. Previous investigation of options to provide step free access at this station have indicated that it would require significant reconstruction of the station building which limits the viability of any such proposal. The feasibility, affordability and value offered by any proposal to provide step free access at this station therefore needs to be proven before TfL can agree to its prioritisation.

SA43 - Travis Perkins – As noted this site could potentially be important in facilitating step free access to Wood Street station if this were feasible. The site is adjacent to tracks used by London Overground services and so any proposed development will need to meet the standard requirements for the protection of, and continued access to, rail infrastructure.

SA42 – Travis Perkins – The site allocation requires development proposals to facilitate step free access (SFA) at the station. Previous investigation of options to provide SFA at this station have indicated that it would require significant reconstruction of the station building which limits the viability of any such proposal. The feasibility, affordability and value offered by any proposal to provide SFA at this station therefore needs to be proven before TfL can agree to its prioritisation.

SA47 – Sainsbury’s car park and adjacent sites – Residential development should be car free and car parking restraint will need to be applied to any redevelopment of the supermarket in line with ItPLP policy T6.3. The site should be well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward, on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services. The accompanying plan shows pedestrian and cycle connectivity across the North Circular Road which forms part of the Transport for London Road Network (TLRN). Any proposals for new crossing facilities or changes to existing crossings will need to be the subject of early discussion with TfL. No new vehicle access/egress should be created to the North Circular Road.

SA46 – Sainsbury’s car park and adjacent sites – The above comments still stand although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity. The existing bus stop and bus stand space within the car park must be retained in any redevelopment, in line with Policy T3 in the London Plan and the emerging LPG on Sustainable Transport, Walking and Cycling. We welcome clarification that the improved connectivity will take the form of improvements to the Billet roundabout underpass and the North Circular footbridge.

—

SA48 - Cork Tree Retail Park - The accompanying plan shows pedestrian and cycle connectivity across the North Circular Road which forms part of the TLRN. Any proposals for new crossing facilities or changes to existing crossings will need to be the subject of early discussion with TfL. No new vehicle access/egress should be created to the North Circular Road.

SA47 - Cork Tree Retail Park – The above comments still stand. We welcome clarification that the improved connectivity will take the form of improvements to the Hall Lane underpass and the underpass along the towpath under A406.

SA49 – Morrisons Supermarket and Car Park - Residential development should be car free and car parking restraint will need to be applied to any redevelopment of the supermarket in line with ItPLP policy T6.3. The site should be well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward on this site, contributions will be required towards the delivery of key walking and cycling links and improvements to bus services.

SA48 – Morrisons Supermarket and Car Park – The above comments still stand although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity.

SA50 – Sainsbury’s Hall Lane - Residential development should be car free and car parking restraint will need to be applied to any redevelopment of the supermarket in line with ItPLP policy T6.3. The site should be well integrated into local walking and cycling networks to facilitate active travel to key destinations.

SA49 – Sainsbury’s Hall Lane – The above comments still stand. The new requirement to accommodate town centre parking should be removed or qualified by reference to disabled persons’ parking and operational parking only. We understand that several floors of the existing car park are unused and some of the spaces are only contracted for use until 2022. As such, a new assessment is needed to establish how parking can be minimised in any redevelopment, consistent with Policy H1 and Policy T6.3 of the London Plan.

SA51 – Albert Corner – We note the new requirement for the site to contribute to transforming Albert Crescent into a pedestrianised public space with green amenity and play space. Although an improved pedestrian space is welcome in principle, it should be noted that Albert Crescent currently accommodates bus standing space, the quantum of which will need to be retained and enhanced as part of any redevelopment of this area. We look forward to working with you on how to achieve this, in a way that is consistent with London Plan Policy T3 and the emerging LPG on Sustainable Transport, Walking and Cycling.

SA53 – Motorpoint, Sewardstone Road - The site should be well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum

–
of development coming forward on this site contributions will be required towards the delivery of key walking and cycling links and improvements to bus services.

SA53 – Motorpoint, Sewardstone Road – The above comments still stand although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity. We welcome the new requirement for development proposals to improve public transport and access.

SA61 - Chingford station car park and bus terminal – The site is part owned by TfL and as such, TfL Commercial Development will provide comments on this site allocation in their separate response – NOW REMOVED FROM SITE ALLOCATIONS

SA62 - 472-502 Larkshall Road, Highams Park – TfL notes the proposal for a new station entrance at Highams Park. The station is managed by TfL London Rail as part of the London Overground and any changes will require their approval. The impact of any new station entrance on existing pedestrian flows in the station would require careful consideration before it could be accepted. We currently have no funding to provide a new entrance so this would need to be provided by a third party. All station improvements will have to be fully funded as part of the development because we are currently unable to provide any TfL funding. Longer term operational costs (staffing and equipment) associated with the new entrance would also need to be subject to negotiation with TfL. We support plans for improved crossing facilities.

SA59 - 472-510 Larkshall Road and James Yard – The above comments still stand. It should be emphasised that TfL is not currently in a position to provide any funding towards station improvements at Highams Park.

The site is currently the subject of a planning application which is being considered by the Council with input from TfL. We understand a financial contribution of £125,000 will be secured towards a new station entrance, fit-out, feasibility appraisal and/or station shell fit-out works in the Section 106 (S106) agreement. The S106 agreement should also include safeguarding the access land until a future decision is taken on the station entrance. Legal obligations are therefore required to progress the new entrance from safeguarding to delivery. General existing rail operations and infrastructure at the site also require protection throughout construction and ongoing occupation via separate legal agreement(s) and a Construction Logistics Plan (CLP).

SA64 - Larkwood Leisure Centre, Nursery and land to rear of Larkwood Leisure Centre - The site should be well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward on this site,

—
contributions will be required towards the delivery of key walking and cycling links and improvements to bus services.

SA61 - Larkwood Leisure Centre, Nursery and land to rear of Larkwood Leisure Centre – The above comments still stand although current funding constraints are likely to lead to a focus on active travel improvements rather than increases in bus capacity.

SA63 – North Circular - The North Circular Road forms part of the TLRN. Any proposals for new crossing facilities or changes to existing crossings will need to be the subject of early discussion with TfL. We support improved connectivity in the form of improvements to the Hall Lane underpass and the underpass along the towpath under the A406. No new vehicle access/egress should be created to the North Circular Road.

SA64 – Justin Road/Trinity Way - The North Circular Road forms part of the TLRN. Any proposals for new crossing facilities or changes to existing crossings will need to be the subject of early discussion with TfL. We support improved connectivity in the form of improvements to the North Circular footbridge. No new vehicle access/egress should be created to the North Circular Road.

SA65 – Hainault Road - The site is adjacent to tracks used by London Overground services and therefore any proposed development will need to meet the standard requirements for the protection of, and continued access to, rail infrastructure.

SA67 – Barrett Road - The site is adjacent to tracks used by London Overground services and therefore any proposed development will need to meet the standard requirements for the protection of, and continued access to, rail infrastructure.

SA69 – Blackhorse Lane - The site should be car free and well integrated into local walking and cycling networks to facilitate active travel to key destinations. To support the quantum of development coming forward on this site, contributions will be required towards the delivery of key walking and cycling links. We support the requirement to provide public realm improvements to connect the site to Blackhorse Road station.

SA74 – Deacon Trading Estate (Cabinet Way) - The North Circular Road forms part of the TLRN. No new vehicle access/egress should be created to the North Circular Road.

—
We hope that these comments prove useful and are taken into account, and we look forward to working with the Council to finalise the Site Allocations Local Plan.

Yours faithfully,

Josephine Vos | Manager
London Plan and Planning Obligations team | City Planning

Consultee	Consultee Organisation Details	Agent	Agent Organisation Details	Site Number	Legally Compliant	Sound	Duty to Cooperate Compliance	Comments detailing why the plan is not legally compliant, unsound or fails to comply with the Duty to Cooperate	Modification(s) you consider necessary to make the Local Plan legally compliant and sound, in respect of any legal compliance or soundness matters identified	Do you consider it necessary to participate in examination hearing session(s)?	If yes, please explain why?	Council's response
Charles Thaire				S421 - Leyton Mills Retail Park	No Response	No	No	My only comment is that the redevelopment should provide a similar level of access to the site as the current facility here is very valuable and much used and needed by the local community. We need not only easy access to large stores for food, DIY, white goods, gardening etc, but also small shops that already exist elsewhere in a high street but also parking to enable taking that bulky shopping home by car: this cannot be easily done by public transport! There should be no significant reduction in retail floor space or car parking unless absolutely necessary or if the store moves on-site. Also it can be very difficult and expensive to provide extra above large high warehouse-like stores without noise and pollution problems, but sites are suitable for housing and there is no need to significantly follow the mantra of providing high density housing at all costs on every development site.	address the issues raised above	-	-	The Council sets out its strategy for managing change in the Borough's Town Centre, High Street, and Local Parades to ensure that they remain relevant into the future and evolve and develop to continue to help residents meet their daily shopping, work and recreational needs and help the Council ensure an effective delivery of its 15-minute neighbourhood objectives. These policies also support new high street and town centre uses that may emerge in the future. Additionally, the Local Plan sets out how the Council will introduce measures to protect and enhance the retail offer in the borough to maintain vitality in our distinctive high streets and town centres. As set out in the Local Plan, all new residential development within the borough is required to be car-free. Moreover, developers will have an obligation to incorporate provision for accessible cycle storage and Car Clubs within their proposals. These provisions are strategically designed to encourage and support sustainable and active transport, ultimately resulting in a noteworthy alleviation of congestion, parking problems and improve air quality. Through the evidence published in the Character Intensification Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Council sets out its strategy for managing change in the Borough's Town Centre, High Street, and Local Parades to ensure that they remain relevant into the future and evolve and develop to continue to help residents meet their daily shopping, work and recreational needs and help the Council ensure an effective delivery of its 15-minute neighbourhood objectives. These policies also support new high street and town centre uses that may emerge in the future. Additionally, the Local Plan sets out how the Council will introduce measures to protect and enhance the retail offer in the borough to maintain vitality in our distinctive high streets and town centres.
Alexander Brooke				S421 - Leyton Mills Retail Park	Yes	No	No	This will not ease the overcrowding in this area. Public services are over subscribed, unable to retain good staff long term locally, and will be adversely affected unless provision is made for more. It will add to the weight of traffic locally. The		No	-	As set out in the Local Plan, all new residential development within the borough is required to be car-free. Moreover, developers will have an obligation to incorporate provision for accessible cycle storage and Car Clubs within their proposals. These provisions are strategically designed to encourage and support sustainable and active transport, ultimately resulting in a noteworthy alleviation of congestion, parking problems and improve air quality. Additionally, Waltham Forest Waste and Recycling guidance for the developers sets out operational requirements and measures to enable safe, regular and easy refuse collections and to alleviate traffic congestion. Moreover, the Local Plan directs planned growth to previously developed sites that are currently under-utilised and tend to generate high numbers of private car/parked vehicle trips. Redevelopment of these sites in accordance with Local Plan policies should significantly reduce vehicle traffic across the borough. Through the evidence published in the Character Intensification Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Local Plan infrastructure policy requires that the development would need to contribute adequate contributions towards physical, social and community, green and transport infrastructure to meet the needs associated with the development and this would include GP services, healthcare facilities and education centres. The Infrastructure Delivery Plan (IDP) identifies infrastructure requirements across the borough overall. It includes projects to ensure adequate infrastructure provision that is relevant to waste, transport, education, utilities, health, culture, sports, the emergency services, and green infrastructure comes forward alongside development in the Local Plan. The site allocation requires that commercial floorspace is provided, ensuring that the site still provides economic opportunities.
Julian Cheyne				S421 - Leyton Mills Retail Park	No Response	No	No	Waltham Forest plans to build tall buildings of 18 to 28 storeys on this site. These towers have to be seen in the context of the line of towers Waltham Forest intends to build all along the east side of the Marshes. Not only will they have an impact themselves at this height on the sense of openness of the open spaces but they will also add to the effect of this line of towers. The skyline study makes the local justification for increasing population in the most densely populated and deprived part of the Borough, for building ever taller buildings and for ignoring any impacts on nearby open spaces. Not only does it argue for high buildings but it intends these buildings to have a cumulative effect. - work holistically with any development at New Spitalfields Market creating a coherent cumulative skyline - Coherent cumulative skyline from the view of the Marshes will simply mean a block of tall buildings, spreading north up the edge of the Marshes. Far from paying attention to the expectation that the openness of open spaces should be protected, Waltham Forest planners consider that, on the contrary, the greater the cumulative impact on views from the Marshes, the better. This is contrary to policy on protecting open spaces. Developments which do harm to vital green open spaces cannot be holistic. The LDFPA has something to say about harm to visual amenity and the sense of openness in reference to the proposed towers on the Lea Bridge Station site The height of the two towers on Sites 1 and 2 are of concern in terms of their contribution upon the open landscape character of the Regional Park and the current visitor perception of openness and removal from the surrounding urban area. These concerns are also relevant to this site.	As Waltham Forest states, 'The borough's green and blue spaces are a vital asset not just in the urban fabric which further the physical and mental health and wellbeing of the borough's residents. As such it is to be protected and enhanced by the policies in this plan'. The site allocation must protect vital green spaces from the unsustainable over development of an already densely populated and deprived part of the Borough which will greatly add to the existing population and thus put great pressure on important green spaces. In addition, the height of towers on this site, in conjunction with other sites, will harm the openness of vital green open spaces and their visual amenity and should not be allowed. The number of units on this site should be reduced and the height of towers restricted to prevent these harms.	Yes	I am a member of Save Lea Marshes and am concerned for the future of open spaces in this part of London The Plan will deliver a multi-functional network of green and blue infrastructure to deliver benefits for all, including, where appropriate, increased public access and it will protect, restore and enhance the borough's natural environment to sustain biodiversity, habitats and species of conservation importance. Waltham Forest is committed to working with partners to protect and enhance the adjoining areas of regional, national and international natural importance in Epping Forest and the Lea Valley Regional Park. Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The IDP for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lea Valley Regional Park (Special Protection Area (SPA) and Ramsar). The Local Plan requires the protection of MGL in the Borough, unless very special circumstances can be justified. The impact of development on sites near to MGL will be assessed as part of this process.	
Helen Anderson				S421 - Leyton Mills Retail Park	No	Yes	Yes	Commercial amenity & well considered public spaces should be enabled as a top priority, to enable community growth rather than just an increase of new-build capacity, suppressing local character.		Yes	-	The Local Plan requires a character-led approach to intensification, including tall buildings and building heights, in accordance with London Plan Policy D1. The Local Plan recognises that, based on an understanding of character and context, some sites or areas in the borough are more appropriate for greater levels of intensification and/or height than others. This character-led approach is supported by evidence from the Characterisation and Intensification Study (2019). Through the evidence published in the Character Intensification Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The site allocation requires that commercial floorspace is provided as part of new development.
Peter Carroll				S421 - Leyton Mills Retail Park	No Response	No	Yes	Site set of the huge car parks in Leyton town centre. It sends a terrible message about WF's priorities, isn't sustainable, isn't attractive, high quality mixed use residential really needed.		No	-	Delivery of public space must be balanced with the need for new housing and employment. The Local Plan sets out requirements for the amount of open space to be delivered within new developments. The level of car parking provision at the S421 Leyton Mills Retail Park site will be reviewed in line with the Local Plan Part 1 Parking Standards set out in Appendix 1 when the site comes forward for redevelopment. As set out in the Local Plan Part 1, all new residential development within the borough is required to be car-free. Moreover, developers will have an obligation to incorporate provision for accessible cycle storage and Car Clubs within their proposals. These provisions are strategically designed to encourage and support sustainable and active transport, ultimately resulting in a noteworthy alleviation of congestion, parking problems and improve air quality.

Consultee	Consultee Organisation Details	Agent	Agent Organisation Details	Site Number	Legally Compliant	Sound	Cooperate	Comments detailing why the plan is not legally compliant, unsound or fails to comply with the Duty to Cooperate	Modification(s) you consider necessary to make the Local Plan legally compliant and sound, in respect of any legal compliance or soundness matters identified	Do you consider it necessary to participate in examination hearing session(s)?	If yes, please explain why?	Council's response
Julie McLeod				S401 - Layton Mills Retail Park	No	No	No	The retail park is really well used and the current parking arrangements are absolutely necessary for the essential shops that are on the site such as Iceland, Aldi. It would be incredibly difficult to utilise these facilities if there was no parking as it is impossible to transport large objects that you purchase in such shops on public transport and these are the closest facilities for a huge number of people.	A commitment to keep the current parking and retail space if the site is redeveloped is needed. This will ensure that you are not removing access to essential retail.	No		The Council sets out its strategy for managing change in the Borough's Town Centre, High Street, and Local Parades to ensure that they remain relevant into the future and evolve and develop to continue to help residents meet their daily shopping, work and recreational needs and help the Council ensure an effective delivery of its 15-minute neighbourhood objectives. These policies also support new high street and town centre uses than may emerge in the future. Additionally, the Local Plan sets out how the Council will introduce measures to protect and enhance the retail offer in the borough to maintain vitality in our distinctive high streets and town centres. As set out in the Local Plan, all new residential development within the borough is required to be car-free. Moreover, developers will have an obligation to incorporate provision for accessible cycle storage and Car Clubs within their proposals. These provisions are strategically designed to encourage and support sustainable and active transport, ultimately resulting in a noteworthy alleviation of congestion, parking problems and improve air quality.
Trisha Hobson				S401 - Layton Mills Retail Park	No	No	No	This site site abuts an important green space. It threatens to damage this site, have unpredictable impacts on local ecosystems and reduce green spaces. This will impact the quality of life of local residents as it is proven that green spaces benefit the health. It will damage trees which contribute to management of the local flood plains!		No		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.
Clare Weiss				S401 - Layton Mills Retail Park	No	No	No	This area should be subject to MCL limitations which rules out major permanent structure developments.	Return the current Spitalfields Market to Hackney Marshes when the market moves away.	Yes	The plans for the south of the borough are unprecedented and mark a significant change from the existing Local Plan yet some of the specifics are already being committed to by developers and the Council.	The Local Plan requires the protection of MCL in the Borough, unless very special circumstances can be justified. The impact of development on sites near to MCL will be assessed as part of this process. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.

				S401 - Layton Mills Retail Park	Yes	Yes	Yes					This response is noted.
G M Ford				S401 - Layton Mills Retail Park	Yes	Yes	Yes					This response is noted.
Francesco Babolin				S401 - Layton Mills Retail Park	Yes	Yes	Yes			No		This response is noted.
Cath Dear				S402 - New Spiffafferts Meadow	Yes	No	Yes	The proposals are not sound. The council has committed itself to protecting the borough's green spaces. Yet the proposed number of homes would put pressure on Redwax Marshes. The view, feel, and sunlight of this unique urban green space would be ruined by the proposed height of the towers. But this is not considered in the skyline notes which only look at the view from the proposed development, notwithstanding the damage to the park, the site is at high risk of flooding and would not make sense. This area already sees horrific traffic congestion, building the proposed number of homes would create gridlock.	Return to marshland in light of flood risk and our need to re-wild. If not, leave it as a light industrial site. If development does go ahead, reduce the number of homes, reduce the height of the buildings to preserve the view and feel from the marshes and do not construct further bridges across the lake.	No	To put forward my case	<p>In order for a Local Plan Document to be adopted, it has to be found "sound" through the Local Plan Examination in Public which is a process undertaken by independent Planning Inspectors appointed by the Secretary of State. The Inspectors need to be satisfied that in the examination that the Local Plan meets the four soundness tests which are:</p> <p>Positively Prepared This means that the Local Plan should be based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development. The National Planning Policy Framework (NPPF) sets out principles through which the Government expects sustainable development can be achieved.</p> <p>Justified This means that the Local Plan should be based on a robust and credible evidence base involving:</p> <ul style="list-style-type: none"> • Research/Fact Finding: the choices made in the plan are backed up by facts. • Evidence of participation of the local community and others having a stake in the area, and • The Local Plan should also provide the most appropriate strategy when considered against reasonable alternatives. These alternatives should be realistic and subject to sustainability appraisal. The Local Plan should show how the policies and proposals help to ensure that the social, environmental, economic and resource use objectives of sustainability will be achieved. <p>Effective This means the Local Plan should be deliverable, requiring evidence of:</p> <ul style="list-style-type: none"> • Sound infrastructure delivery planning. • Being on regulatory or national/planning barriers to delivery. • Delivery partners who are signed up to it and • Evidence with the strategies of neighbouring authorities, including neighbouring marine planning authorities. <p>The Local Plan should be flexible and able to be monitored.</p> <p>The Local Plan should indicate who is to be responsible for making sure that the policies and proposals happen and when they will happen. The plan should be flexible to deal with changing circumstances, which may involve minor changes to respond to the outcome of the monitoring process or more significant changes to respond to problems such as lack of funding for major infrastructure proposals. Although it is important that policies are flexible, the DPD should make clear that major changes may require a formal review including public consultation. Any measures which the Council has included to make sure that targets are met should be clearly linked to an Annual Monitoring Report.</p> <p>Consistent with National Policy and in general conformity with the London Plan. Local Plans should be prepared to be consistent with National Policy (the NPPF) and for London Borough's, in "general conformity" with the London Plan. Local Plans also need to be legally compliant to avoid being legally challenged in the examination or through the planning application process.</p>

Consultee	Consultee Organisation Details	Agent	Agent Organisation Details	Site Number	Legally compliant	Sound	Duty to Cooperate	Comments detailing why the plan is not legally compliant, unsound or fails to comply with the Duty to Cooperate	Modification(s) you consider necessary to make the Local Plan legally compliant and sound, in respect of any legal compliance or soundness matters identified	Do you consider it necessary to participate in examination hearing session(s)?	If yes, please explain why?	Council's response
Adam Burch				S402- New Spitalfields Market	Yes	No	Yes	<p>Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing, in the north of the borough. Developments must be designed to minimise access to Epping Forest SAC and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have any different approach to the protection of open green spaces in the borough is unsound. While protecting Epping Forest SAC is a given by legislation, there is no reason why the same approach cannot be taken towards the marshes.</p> <p>The following threats are all further reasons why the site is unsound: It is inappropriate to build tower blocks near to open spaces because they reduce their sense of openness. 2,750 homes: massive population pressure on Hackney Marshes Tall buildings: 18*30 storeys Construction of bridge over River Lea Site is floodplain: risk of river/flood flooding Increased congestion: Bucknall Road Drift railway noise: candidate of river and marshes but highlights site as gateway through and west of, from, the Marshes</p>	<p>The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be reframed. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green spaces, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.</p> <p>Argument for importance of green space on mental health: SECTION BOD: The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be reframed. 				S402- New Spitalfields Market	Yes	No	Yes	<p>Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing, in the north of the borough. Developments must be designed to minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have any different approach to the protection of open green spaces in the borough is unsound. While protecting Epping Forest SAC is a given by legislation, there is no reason why the same approach cannot be taken towards the marshes.</p> <p>SECTION BOD: The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be reframed. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green spaces, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.</p> <p>Argument for importance of green space on mental health: SECTION BOD: The relationship between people and green spaces should be consistent across the borough. Felicity Jones				S402- New Spitalfields Market	Yes	No	Yes	<p>do not think the current plans are sound as they will negatively affect the area and it's inhabitants in a number of ways. The plan is not sound because of local biodiversity. This will happen as the area is built on, and then further impact will come from the population increase in the area. Increase of people, parts, noise, light, vehicles and pollution will have a hugely negative effect. Increased mental wellbeing of the area. Local health has relied on the sanctity of the marshes, for decades and especially to over look down. Such open green spaces boost mental wellbeing, help reduce crime and help people recover from illness. Creating a multi-storey eye saw will completely change the place and take something very precious away from us. A less effective flood plain. The area is a flood plain for the local area. This needs to be kept in tact for practical effectiveness. The site weather is only getting more extreme. I have seen 2 floods in my nearby area of Hackney Wick in the last year. The flood plans need to be preserved.</p>	<p>would like to see the site retained and maintained for the benefit of the existing local community and wildlife. The site area surrounds the potential to absorb rising levels of water (It is estimated that it tree absorbs 12,000 gallons of water a year) and protect other areas of the borough from flooding. It would support a diverse ecosystem and benefit mental and physical health. Felling trees, I suggest the site is left as it is, as a light industrial site where the risk of large loss of human life and property in the event of flooding is reduced. Pollution and overcrowding with detrimental effect would also be reduced.</p>			<p>The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.</p> <p>The NHA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>Through the evidence published in the Character Identification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>The new Local Plan sets stringent environmental standards, including with respect to pollution. It requires that development should meet or improve upon air quality neutral standards over the lifetime of a development and does not contribute to a decrease in air quality during the construction or operating stages of development.</p> <p>As set out in the Local Plan, all new residential development within the borough is required to be car-free. Moreover, developers will have an obligation to incorporate provision for accessible cycle storage and Car Clubs within their proposals. These provisions are strategically designed to encourage and support sustainable and active transport, ultimately resulting in a noteworthy alleviation of congestion, parking problems and improve air quality. Additionally, Waltham Forest Waste and Recycling guidance for the developers sets out operational requirements and measures to enable safe, regular and easy refuse collections and to alleviate traffic congestion. Moreover, the Local Plan directs planned growth to previously developed sites that are currently under-utilised and land to generate high numbers of private car/motorised vehicle trips. Redesignation of these sites in accordance with Local Plan policies should significantly reduce vehicle traffic across the borough.</p> <p>Through the evidence published in the Character Identification Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. Dr Daniel Hanley				S402- New Spitalfields Market	Yes	No	Yes	<p>Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing, in the north of the borough. Developments must be designed to minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have any different approach to the protection of open green spaces in the borough is unsound. While protecting Epping Forest SAC is a given by legislation, there is no reason why the same approach cannot be taken towards the marshes.</p> <p>I object to the plans at S402 - New Spitalfields Market. The tall towers proposed (and the high population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the marshes have. That is unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 2000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during cold but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.</p>	<p>The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. However, in the south of the borough, access to the marshes is being used to support innovation development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unworkable. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.</p> <p>The tall towers proposed (and the huge population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 2000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unworkable and I object to these proposals.</p>	<p>The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of cars, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create good railway links to the site, with no residential neighbours. This would be a suitable modification.</p> <p>The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create good railway links to the site, with no residential neighbours. This would be a suitable modification.</p>	No	<p>If yes, please explain why?</p>	<p>The NHA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EFAC)</p> <p>The NHA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>Through the evidence published in the Character Intermittency Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver a higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchment areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>Having site allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p> <p>Through the evidence published in the Character Intermittency Study, the Local Plan policies have been prepared to ensure that on sites where higher density development needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver a higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p>
Natalie Mady				S402- New Spitalfields Market	Yes	No	<p>There needs to be a more joined up approach to impacts on public health. It is unrealistic that whilst in the north of the borough, developments must be designed to 'mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC, there is not a similar protection and thought in the place concerning the area around the River Lea, the marshes. The proposed development is right on the edge of the river, an important habitat for a number of birds including ducks, geese, cranes, curlews and greylag geese. The scale of the proposed developments will impact negatively and threaten much of this important wildlife and biodiversity. The construction in this area and the influx of new residents will also pose threat to the quiet and peaceful undisturbed nature of the area. The Marshes is a valuable open space and the proposed plan of the development will impact on the sense and feel of the Marshes reducing the overall wellbeing effect this green space can have on our mental health. It is also proposing to build on a floodplain. With predicted changes in weather and climate change the London basin is expected to flood, putting a huge flood risk to London and particularly flood plain regions. These areas need to be planned for that flooding and so building on them is wily unworkable. The Marshes and River Lea area have provided a much needed green space to enjoy, particularly during the pandemic. They have supported my mental health as spaces that are valued by community. The continued increase of high rise developments is changing the whole atmosphere of the area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver a higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p>	<p>I suggest the site remain as it is. The current area is not fit to provide sufficient amenities for the increased openness in this area. It would be better to enhance the area for local employment and to provide more green jobs. Affording the same level of protection to the site around the Epping Forest SAC. If anything is to be built should not be larger in height or footprint than any existing structures.</p>	No	<p>If yes, please explain why?</p>	<p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Molly Aitken				S402- New Spitalfields Market	Yes	No	Yes	As a local resident, I was personally devastated to hear of the development plans for Walkminster and Lea Marshes. It is absolutely a unique space of history, tranquility and biodiversity, that benefits the mental health of the surrounding community - one of the last free activities and joys many long-residing low-income residents from the borough can enjoy, who have been priced out of local cafes and shops. I strongly object to the plans at S402 New Spitalfields Market. It would be absolutely lethal to develop tall towers, which will not even have cheap flats to benefit the people most affected by the housing crisis, not only for the biodiversity (we are living a climate crisis and need to be planning ahead in such) but for the sense of open space the marshes currently have. To build tall towers would be a blight on the current views and landscape. This is not even to mention buildings on a flood plain. The Lea Valley is at risk of tidal flooding if the London Barrier were to fail. I think this building will not be affected by climate change in the future, we are totally mistaken! Everything will be! And it is especially because of this that we need areas of natural biodiversity. Once the gates are open for this kind of development, it just won't stop. And the thought of that makes me feel very depressed to be a local resident.	The relationship between people and green spaces should be consistent across the borough. If Epping forest is protected, why aren't the marshes? Green spaces need to be protected from developments which will cause damage by an increase in the number of people, in the number of pets, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes.			
Jack Barnett				S402- New Spitalfields Market	Yes	No	Yes	Of course affordable housing is a necessity - but this is not even affordable! and I simply cannot come at the expense of the ever-decreasing green spaces. It is such short term thinking, it is completely contradictory to durability and, besides existing nature, and these schemes to improve the local ecology. It just won't happen. The ecological balance of a marsh is delicate, sensitive, and it took 1000s of years to get to this point. This development for site S402 will also increase traffic and pollution in the area.	This benefits that open marshland has for the local and wider community and sustainable pressure this takes of primary care services is absolutely crucial. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity - something with it is just as important to consider when we are thinking of any sort of viable, enjoyable future. Watford Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good railway links to the site, with no residential neighbours. This would be a suitable modification.	No		
Sarah Ruckelshaus				S402- New Spitalfields Market	Yes	No	Yes	This area is a haven for many residents who live hard lives. It's vital for our mental health. You wouldn't be putting these up in Green Park would you? This is an area where people can be healthy and nature is low level, and we don't need it highlighted. We need to protect the marshes. To have two different approaches to the same area is a contradiction. Green spaces are vital to our mental health and wellbeing. We need to protect the marshes. To have two different approaches to the same area is a contradiction. Green spaces are vital to our mental health and wellbeing. We need to protect the marshes. To have two different approaches to the same area is a contradiction.	I suggest are that the site be returned to marshland, due to the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived.	No		
Andrew McQuigley				S402- New Spitalfields Market	Yes	No	No	The height of the proposed buildings will impinge on the Hackney Marshes, reducing the atmosphere of open space. This, along with added light pollution, will also have detrimental effect on wildlife. Increased risk of flooding in this area in future years will be exacerbated as this development is on a floodplain. There will be added congestion in Ruckelshaus Rd. with accompanying increases in pollution.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of pets, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as is, as a light industrial site. Watford Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good railway links to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No		
										No		

Consultee	Consultee Organisation Details	Agent	Agent Organisation Details	Site Number	Legally compliant	Sound	Duty to Cooperate	Comments detailing why the plan is not legally compliant, unsound or fails to comply with the Duty to Cooperate	Modification(s) you consider necessary to make the Local Plan legally compliant and sound, in respect of any legal compliance or soundness matters identified	Do you consider it necessary to participate in examination hearing session(s)?	If yes, please explain why?	Council's response
	S402 - New Spitalfields Market	Yes	No	Yes	No	No	No	<p>1. Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing in the north of the borough. Developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, it is essential to ensure no adverse effect on the Epping Forest SAC. However, it is essential to ensure no adverse effect on the Epping Forest SAC. However, it is essential to ensure no adverse effect on the Epping Forest SAC. However, it is essential to ensure no adverse effect on the Epping Forest SAC.</p> <p>2. The proposed site S402 - New Spitalfields Market is located on a known flood plain. If it is built on, this site will be there for many years to come. With more extreme weather, river and tidal rises that are predicted with climate change, there is a severe risk of flooding on this site. Should the London barrier ever fail, it is also at risk from tidal flooding. I therefore object to the proposed plans for the S402 - as a building over 2750 homes, with a predicted population increase of 5000-6000 people, on a known flood plain is unsound.</p> <p>3. The proposed development at S402 - New Spitalfields Market will put huge population pressure on the surrounding marshland, with 2750 homes bringing an estimated 6000-8000 more people to the area. This population increase will increase congestion, air, noise and light pollution on the vulnerable marshland area to the north of the site. The proposed site is a vulnerable environment, with the Hackney side of the Old River Lea being a Site of Importance for Nature Conservation (SINC). Therefore it is not appropriate to have a concentration of this development on the site as it is around the Epping Forest SAC. This use of this site is because another 5000-6000 people in a patch of high population pressure on a vulnerable SINC that will not be able to withstand the weight of increased pollution and population density, therefore I wish to object to this proposal as it is unsound.</p>	<p>1. The relationships between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by a increase in the number of people, in the number of parks, lighting and the impact of tall buildings. If the green spaces near a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site, with no residential employment sites. This is already a low employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good gateway links to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.</p> <p>2. I would suggest that the site be returned to marshland in light of the flood risks the area is under, especially with the predicted changes that will occur in the coming years with climate change. The site as planned has the potential to absorb rising levels of water (its estimated that 1 tree absorbs 15000 gallons of water a year) and protect other areas of the marshland that marshall brings. Failing this, I suggest the site be kept as it is, as a light industrial site, with the risk of loss of human life and property in the event of flooding is reduced.</p> <p>3. The relationships between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, lighting and the impact of tall buildings. If the green spaces near a proposed development cannot sustainably absorb the impacts of the development, as has the Marshes case, then the development should be refused.</p> <p>4. The relationships between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by a increase in the number of people, lighting and the impact of tall buildings. If the green spaces near a proposed development cannot sustainably absorb the impacts of the development, as has the Marshes case, then the development should be refused.</p> <p>5. The relationships between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by a increase in the number of people, lighting and the impact of tall buildings. If the green spaces near a proposed development cannot sustainably absorb the impacts of the development, as has the Marshes case, then the development should be refused.</p>	No	If yes, please explain why?	<p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that flood risk can be successfully managed against for the lifetime of the development and that the development does not increase flood risk either on or off the site.</p> <p>The evidence published in the Character Interconsultation Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development by infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>As set out in the Local Plan, all new residential development within the borough is required to be car-free. Moreover, developers will have an obligation to incorporate provision for accessible cycle storage and Car Clubs within their proposals. These provisions are strategically designed to encourage and support sustainable and active transport, ultimately resulting in a noteworthy reduction in congestion, parking problems and improve air quality. Additionally, Waltham Forest Waste and Recycling guidance for the developers sets out operational requirements and measures to enable safe, regular and easy refuse collections and to alleviate traffic congestion. Moreover, the Local Plan directs planned growth to previously developed sites that are currently under-utilised and land to generate high numbers of private car/motorised vehicle trips. Redesignation of these sites in accordance with Local Plan policies should significantly reduce vehicle traffic across the borough.</p> <p>The new Local Plan sets stringent environmental standards, including with respect to pollution. It requires that development should meet or improve upon air quality neutral standards over the lifetime of a development and does not contribute to a decrease in air quality during the construction or operating stages of development.</p> <p>The IDP for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar).</p>
	S402 - New Spitalfields Market	Yes	No	Yes	No	No	No	<p>1) Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing in the south of the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green 'buffers' and 'corridors,' wild public amenity, green roofs, and tree planting which will produce biodiversity net gain sites.</p>
	S402 - New Spitalfields Market	Yes	No	Yes	No	No	No	<p>1) object to the plans at S402 - New Spitalfields Market. The tall towers proposed (and the huge population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 2000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.</p>	<p>The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes on primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, as a light industrial site that has minimal impact on the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good gateway links to the site, with no residential neighbours. This would be a suitable modification.</p>	No	If yes, please explain why?	<p>Through the evidence published in the Character Interconsultation Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development by infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>The IDP for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar).</p> <p>The evidence published in the Character Interconsultation Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development by infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The allocation of this site requires the creation of high quality green space.</p> <p>The local plan policy Biodiversity and Geodiversity will seek to protect and enhance biodiversity and geodiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green 'buffers' and 'corridors,' wild public amenity, green roofs, and tree planting which will produce biodiversity net gain sites.</p>

No		Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) Through the evidence published in the Character Intensification Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The local plan policy Biodiversity and Geodiversity will seek to protect and enhance biodiversity and geodiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green 'buffers' and 'corridors,' 'wild' public amenity, green roofs and tree planting which will produce biodiversity net gain on site. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Victor Smith				S402- New Spitalfields Market	Yes	No	Yes	As a Londoner who has regularly used Hackney Marshes as a place to walk, exercise, and meet friends, I think that the Local Plan is unsound. London has very few green spaces, and overdevelopment in many parts of London is already destroying parks, gardens, and nature areas that local people enjoy. It is disturbing that development is now threatening one of the largest green spaces in London with high tower blocks that will enclose and flatten the Marshes and an excessive population increase that will crowd the area at a time when people desperately need open space. Green spaces are essential to mental health, particularly for Londoners like myself who do not have the time and money to leave London regularly for countryside breaks. The Marshes are particularly precious because they are easily accessible to people in more deprived areas of London who are already at risk from worse health outcomes. I'm also concerned that cramming blocks of flats into a flat plan will not result in safe and healthy homes. Crowding the Marshes with tall tower blocks will make our London a little more grey and sad during a time of environmental crisis.	I believe that the site should be preserved as a marshland and a flood plain, to protect the mental health and safety of isolated residents and other Londoners who visit the Marshes. However, as it is, the site currently has little negative impact on the health benefits of the Marshes, and is a Locally Significant Industrial Site that provides much-needed jobs in London. So I believe that leaving it as it is would be acceptable.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Site of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINCS), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development. In April 2020, the Council declared a Climate Emergency. In the chapter in Local Plan Part 1 entitled Addressing the Climate Emergency, the Council sets out a strategic objective to build the borough's climate change resilience by targeting net-zero carbon emissions by 2030. This will be achieved by delivering more environmentally friendly development that is more sustainable (and where possible connect), whether it's new build or the retrofitting of existing property, reducing the dependency on cars by encouraging modal shifts to active forms of transport such as walking and cycling, consuming less and recycling more which is in line with the UK's Circular Economy Statement and the promotion of nature, health and wellbeing to increase resilience against climate change conditions such as heatwaves and flooding. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practice and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) Through the evidence published in the Character Intensification Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
S402- New Spitalfields Market				S402- New Spitalfields Market	Yes	No	Yes	object to the plans at S402 - Lee Bridge Station. The tall towers proposed and the huge population increase this will bring to the area will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 1000 clinical studies in the last 5 years alone. The Lee Valley Regional Park Authority (LVRPA) has said these towers are a concern in terms of their intrusion upon the open landscape character of the Regional Park and the current outdoor recreation opportunities and disconnection from the surrounding urban area. It has also said that these towers will generate a regular and noticeable increase in footfall to the Park, which is clear this vulnerable marshland area cannot absorb. The open green space of the Marshes has been a saviour for so many of our local residents. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks will completely destroy that. Therefore to bring forward these tower blocks and the destruction of Pocket Park, that are going to devastate the open space and biodiversity of the area is unsound and I object to these proposals.	The modifications I suggest are that the Orient Way Pocket Park site be retained, in light of the clear benefits green space has on our mental, physical and social health. The benefits that open green space has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between lower levels of socio-economic status and reduced healthcare outcomes. A second modification suggested is the number of units and the size of the towers should be significantly decreased, to reduce population pressure on the surrounding marshland area that can absorb it. The figures quoted for population increase are in line with pre-pandemic and pre-covid statistics, which whilst understood are the official figures, yet it is clear that population increase at this scale will not happen in the next 10 years, therefore these modifications suggested are sound.	No		The allocation of this site requires the creation of high-quality green space. Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Consultee	Consultee Organisation Details	Agent	Agent Organisation Details	Site Number	Legally compliant	Sound	Duty to Cooperate	Comments detailing why the plan is not legally compliant, unsound or fails to comply with the Duty to Cooperate	Modification(s) you consider necessary to make the Local Plan legally compliant and sound, in respect of any legal compliance or soundness matters identified	Do you consider it necessary to participate in examination hearing session(s)?	If yes, please explain why?	Council's response
				S402- New Spitalfields Market	Yes	No	Yes	below the plan is not sound because it is going to endanger the marshes natural ecosystem which is fundamental part for good quality living of the area	consider necessary to leave the site as it is			<p>The HRa for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.</p> <p>In order for a Local Plan Document to be adopted, it has to be found "sound" through the Local Plan Examination in Public which is a process undertaken by independent Planning Inspectors appointed by the Secretary of State. The inspectors need to be satisfied that in the examination that the Local Plan meets the four soundness tests which are:</p> <ul style="list-style-type: none"> Positively Prepared It means that the Local Plan should be based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development. The National Planning Policy Framework (NPPF) sets out principles through which the Government expects sustainable development can be achieved. Justified This means that the Local Plan should be based on a robust and credible evidence base involving: <ul style="list-style-type: none"> Research/consulting the choices made in the plan are backed up by facts. Absence of participation of the local community and others having a stake in the area, and The Local Plan should provide the most appropriate strategy when considered against reasonable alternatives. These alternatives should be realistic and subject to sustainability appraisal. The Local Plan should show how the policies and proposals help to ensure that the social, environmental, economic and resource use objectives of sustainability will be achieved. Effective This means the Local Plan should be deliverable, requiring evidence of: <ul style="list-style-type: none"> Sound infrastructure delivery planning. Absence of regulatory or national planning barriers to delivery; Delivery partners who are signed up to it; and Cohesion with the strategies of neighbouring authorities, including neighbouring marine planning authorities. The Local Plan should be flexible and able to be monitored. The Local Plan should indicate who is to be responsible for making sure that the policies and proposals happen and when they will happen. The plan should be flexible to deal with changing circumstances, which may involve minor changes to respond to the outcome of the monitoring process or more significant changes to respond to problems such as lack of funding for major infrastructure proposals. Although it is important that policies are flexible, the DPD should make clear that major changes may require a formal review including public consultation. Any measures which the Council has included to make sure that targets are met should be clearly linked to an Annual Monitoring Report.
Susan Marsh				S402- New Spitalfields Market	Yes	No	Yes	object to the plans at S402 - New Spitalfields Market. The tall towers proposed (and the huge population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 2000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it is not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it is not just during covid but for the last 20 years and longer. The UK's target mental health charity, Mind, shows how crucial nature and outside spaces are for mental health (https://www.mind.org.uk/information-support/tips-for-everyday-living/nature-and-mental-health/how-nature-benefits-mental-health/). Continued good mental health and wellbeing has a direct impact on the NHS as it is not just during covid but for the last 20 years and longer. The UK's target mental health charity, Mind, shows how crucial nature and outside spaces are for mental health (https://www.mind.org.uk/information-support/tips-for-everyday-living/nature-and-mental-health/how-nature-benefits-mental-health/). Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connectors with the potential to create good quality links to the site, with no residential neighbours. This would be a suitable modification.			Through the evidence published in the Character Intermittency Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
Leah Pearson				S402- New Spitalfields Market	No Response	No	Access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of open green spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes. I use the marshes daily for my mental health and this development would greatly limit my access.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people & cars, lighting and the impact of tall buildings. If green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Minister envisages, the development should be refused. Furthermore, these plans are harmful as they will undoubtedly create a line of towers all along the east side of the Marshes. I suggest the modification that this site is kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connectors with the potential to create good quality links to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No		Through the evidence published in the Character Intermittency Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
Renee Nye				S402- New Spitalfields Market	No	No	object to the plans at S402- New Spitalfields Market. The tall towers proposed (and the huge population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 1000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of us local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.	ECOMOD B03. The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connectors with the potential to create good quality links to the site, with no residential neighbours. This would be a suitable modification.	No		Through the evidence published in the Character Intermittency Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The open green space of the Marshes has been a source for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers at along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.	The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is a particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as is, a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites. This is already a low risk employment site (Locally Significant Industrial Site) with good road (A12) connectors with the potential to create good quality links to the site, with no residential neighbours. This would be a suitable modification.	No		Through the evidence published in the Character Intermittency Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The NHA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
Sarkis Kani				S402 - New Spitalfields Market	No	No	No	object to the plans at S402 - New Spitalfields Market. The tall towers proposed (and the huge population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 1000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a source for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.	The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as is, a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good railway links to the site, with no residential neighbours. This would be a suitable modification.	No		Through the evidence published in the Character Intermittency Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The NHA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). Through the evidence published in the Character Intermittency Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
				S402 - New Spitalfields Market	No			object to the plans at S402 - New Spitalfields Market. The tall towers proposed (and the huge population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.	The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as is, a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good railway links to the site, with no residential neighbours. This would be a suitable modification.	No		Through the evidence published in the Character Intermittency Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The NHA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). Through the evidence published in the Character Intermittency Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
Earl Henthorn	New Spitalfields Market			S402 - New Spitalfields Market	Yes	No	Yes	object to the plans at S402 - New Spitalfields Market. This space has been alive, as a disabled person and double leg amputee who has PTSD. The tall towers proposed, will completely destroy this connection I am able to achieve with nature. And the huge population increase will make living and finding moments of relaxation so much harder on top of this it will destroy the biodiversity that the Marshes have. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 1000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.	The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as is, a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good railway links to the site, with no residential neighbours. S Pendar-Hughes	New Spitalfields Market			S402 - New Spitalfields Market	No response	No	No response	object to the S402 plans as unsound because: The Marshes present a unique natural environment which should be protected from the impact of development. Proposals completely ignore the fact that parts of the marsh are considered a Site of Importance for Nature Conservation. Epping Forest National Park should be developed in North of the Borough and Hackney Marshes should receive the same protection. The proposed development is likely to have significant negative impact on the natural environment (excessive increased population puts pressure on surrounding environment and increases littering, air, light and noise pollution, risk of increased flood and more frequent flooding) The health and wellbeing of current residents (irrevocable and unacceptable change to the character of the open space - residents whose that access to open green space improves mental health and reduces pressure on the NHS so we should be everything to preserve this - sudden increase in population puts pressure on access to the space for all and on local services which is bad for everyone)	In order to make the proposals sound, I would like to see the site returned to marshland, in light of the need to protect green spaces at a time of climate change and of the proven benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough where there is a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. This approach also acknowledges and builds on the conservation status of the Hackney site of the site and protects the open character of the area to create an even more unique natural environment. It also increases the flood-absorbing capabilities of the area, which in turn reduces flood risk to local property and lives. Failing the return of the site to natural marshland, I suggest leaving the site as is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good railway links to the site, with no residential neighbours. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p>
				S402- New Spitalfields Market	Yes	No	Yes	<p>object to the plans at S402 - New Spitalfields Market. The development proposed, and subsequently the major population increase this will bring as a result, will completely erode the sense of open green space and biodiversity that the Marshes have provided to East London residents for many years, which is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces; additionally, it acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 3000 clinical studies in the last 5 years alone.</p> <p>Over lockdown 2020, the Marshes became my safe haven, being only able to exercise for one hour a day, I would not be in the marshes, and take refuge in the green space and see the surrounding park, and then on both hours the marshes provided with a sense of grounding, being in the nature calmed my anxiety and PTSD. I made it through lockdown because I had somewhere like the Marshes to go to, and sadly not all people have access to such an abundance of nature and biodiversity in their neighbourhood. I am not alone in saying the open green space of the Marshes has been a saviour for so many local residents. Like me, many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer.</p> <p>Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.</p>	<p>The modifications I suggest are that the site be returned to marshland, as there are clear benefits that this open space has provided to us for our mental, physical and social health. There are immeasurable benefits that the marshland has for the local and wider community, and the pressure this takes off our NHS and primary care services is evident.</p> <p>The south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes on the marshland helps support these areas. Failing the return of the site to natural marshland, I suggest leaving the marshes in tact as it is, a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity.</p>	No		<p>Through the evidence published in the Character Intervisitation Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchment areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>The HRM for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>Through the evidence published in the Character Intervisitation Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.	The relationship between people and green spaces should be consistent across the Borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of cars, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, as Hackney Marshes can, then the development should be refrained. I suggest that this site be returned to marshland land to protect its conservation status as a SINC. Failing that, the site should be left as it is, as a low rise locally significant industrial site that Waltham Forest needs anyway, that has minimal impact on the vulnerable river environment it sits on.			Through the evidence published in the Character Intermittency Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver a higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchment areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The NPA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) Through the evidence published in the Character Intermittency Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
Janet Hudge				S402 - New Spitalfields Market	No Response	No	No Response	The development proposals include planned building of two excessively high tower blocks which can only impact negatively on the sense of openness in the adjacent open green space. The Hackney Marshes currently offer a beneficial amenity to local residents and potentially their mental well being, but the space would be overshadowed and dominated by tall blocks. It is not necessary to build high rise to achieve high population densities if that is what is required, but very tall blocks will cause long shadows and a poor surrounding microclimate including wind tunnel effects. The proposals are therefore unsound.	Any residential development should be limited to medium rise building so that it does not negatively affect views from the Marshes or the environment within the site itself.	No	I feel it is necessary to be able to emphasise the potential permanent loss to the environmental amenity for the local area	Through the evidence published in the Character Intermittency Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver a higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Local Plan requires that any new development must respect the amenity of existing residents and avoid harmful impacts from overlooking, enclosure, loss of privacy and loss of daylight/shadow. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchment areas. Fernia Fernera				S402 - New Spitalfields Market	Yes	No	Yes	The proposed development at S402 - New Spitalfields Market will put high population pressure on the surrounding marshland, with 2,750 homes bringing an estimated 1000-1600 more people to the area, alongside an increase in domestic cars. This population increase will in turn increase congestion, air, noise and light pollution on the vulnerable marshland area it sits on. The proposed site is a vulnerable river environment with the Hackney side of the Old River Lea being a Site of Importance for Nature Conservation (SINIC), and there is no adequate mention of this conservation status in the proposal as it is around the Epping Forest area. This use of this site to house another 1000-1600 people is putting high population pressure on a vulnerable SINIC that will not be able to withstand the weight of increased pollution and population density, therefore I wish to object to this proposal as it is unsound.	The relationship between people and green spaces should be consistent across the Borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of cars, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, as Hackney Marshes can, then the development should be refrained. I suggest that this site be returned to marshland land to protect its conservation status as a SINIC. Failing that, the site should be left as it is, as a low rise locally significant industrial site that Waltham Forest needs anyway, that has minimal impact on the vulnerable river environment it sits on.	Yes		Through the evidence published in the Character Intermittency Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. 				S402- New Spitalfields Market	Yes	No	Yes	The proposed development at S402 outlines there will be a total of 2750 new homes within the area, meaning an estimated 5000-6000 new commutes to a small, congested area. This dramatic increase in population will in turn increase light pollution, congestion, air quality, waste facilities and traffic within a highly vulnerable area. The development threatens biodiversity, wildlife and community green space all of which in the current climate are not just valuable but essential, and must be protected at all costs. This use of this site to house another 5000-6000 people is putting huge population pressure on a vulnerable area that will not be able to withstand the weight of increased pollution and population density. I therefore object to this proposal as it is unsound.	Green spaces across cities must not only be protected but also developed and enhanced. Without surrounding wildlife, green spaces, trees or even the health and existence of its inhabitants, if these proposed developments threaten green spaces ability to absorb its impacts, then the development should be re-worked or removed. I suggest this site be kept to marshland and respected as an area of conservation otherwise developed into an agricultural site.			Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. Through the evidence published in the Character Intensification Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
Tara				S402- New Spitalfields Market	No	No	No	The building of 2500 apartments means at least 5000 people encroaching on this small area along with their pets, cars, waste and emissions. It will have a massive negative impact on the nature causing pollution and forced migration for lots of wildlife and birds. This area is so important for citizens and visitors mental health as well as for the animals and nature that calls the marshes home. In so far as to have a green place where you can relax and wander without fences or paths - in fact its very rare in London. This is also a floodplain, the marshes will soak up any overflow from the river or rainwater. Weather in the future is expected to be more unpredictable and potentially more storms and rain. It could be dangerous to build on this floodplain. In addition this project is being marketed as creating affordable houses, but inverte apartments in every location will not be marketed to your average citizen, these are luxury apartments.	None. Keep it as is.		Through the evidence published in the Character Intensification Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The new Local Plan sets stringent environmental standards, including with respect to pollution. It requires that development should meet or improve upon air quality neutral standards over the lifetime of a development and does not contribute to a decrease in air quality during the construction or operating stages of development. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1; Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. There are many definitions of affordable housing. Because of the severity of the housing crisis, an increasing number of households on a range of income are affected. This means a range of options are needed. Low-cost rent including Social Rent and London Affordable Rent will form the basis of genuinely affordable homes, however intermediate housing can and will still play an important role. Shared Ownership for example, supports home ownership aspirations for people who might otherwise struggle to get on the housing ladder. The allocations require affordable housing in line with the policy approach set out in Local Plan Part 1. The Local Plan sets out requirements in Policy 14 and 15 for the proportions of homes in a scheme which are expected to be low-cost rented, and which are to be intermediate and the expected mix of sizes. Variations are considered when they can be justified based on a number of factors including the location, area characteristics, design constraints, scheme viability and end-user affordability.	
Name Surname				S402- New Spitalfields Market	Yes	No	No Response	I do not consider the Local Plan Part 2 sound on the basis of ...	Proposed modification...	No	To represent etc.	In order for a Local Plan Document to be adopted, it has to be found "sound" through the Local Plan Examination in Public which is a process undertaken by independent Planning Inspectors appointed by the Secretary of State. The Inspectors need to be satisfied that in the examination that the Local Plan meets the four soundness tests which are: Positively Prepared This means that the Local Plan should be based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development. The National Planning Policy Framework (NPPF) sets out principles through which the Government expects sustainable development can be achieved. Justified This means that the Local Plan should be based on a robust and credible evidence base including: - Research/Fact Finding: The choices made in the plan are backed up by facts. - Evidence of participation of the local community and others having a stake in the area, and - The Local Plan should also provide the most appropriate strategy when considered against reasonable alternatives. These alternatives should be realistic and subject to sustainability appraisal. The Local Plan should show how the policies and proposals help to ensure that the social, environmental, economic and resource use objectives of sustainability will be achieved. Effective This means the Local Plan should be deliverable, requiring evidence of: - Sound infrastructure delivery planning. - Being in regulatory or national planning barriers to delivery. - Delivery partners who are signed up to it, and - Evidence with the strategies of neighbouring authorities, including neighbouring marine planning authorities. - The Local Plan should be flexible and able to be monitored. The Local Plan should indicate who is to be responsible for making sure that the policies and proposals happen and when they will happen. The plan should be flexible to deal with changing circumstances, which may involve minor changes to respond to the outcome of the monitoring process or more significant changes to respond to problems such as lack of funding for major infrastructure proposals. Although it is important that policies are flexible, the IDP should make clear that major changes may require a formal review including public consultation. Any measures which the Council has included to make sure that targets are met should be clearly linked to an Annual Monitoring Report. Consistent with National Policy and in general conformity with the London Plan. Local Plans should be prepared to be consistent with National Policy (the NPPF) and for London Boroughs", in "general conformity" with the London Plan. Local Plans also need to be Legally Compliant to avoid being legally challenged in the examination or through the planning application process.
Jack Gooding				S402- New Spitalfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing in the north of the borough. Developments must be designed to "minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effects on the Epping Forest SAC. However, to the south of the borough, access to the marshes is being used to support extension development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have contradictory approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes. Additionally there is a strong evidence base linking access to open green spaces and promoting good mental and physical health. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 2000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during COVID-19 but for the decades previously. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devalue the open space and biodiversity of the area is completely unsound and subject to these proposals. The proposed site S402 - New Spitalfields Market is located on a known flood plain. If it is built on, this will be there for many years to come. With	would suggest that the site be returned to marshland in light of the above reasons protecting green space, supporting good mental and physical health of residents, and that the marshes is a known flood risk area, especially with the predicted changes that will occur in the coming years with climate change. The site as marshland has the potential to absorb rising levels of water (it is estimated that 1 sea leveler 1,000 gallons of water a year) and protect other areas of the borough from flooding, while also thriving as a site of biodiversity that marshland brings. Failing this, I suggest the site is left as is, as a light industrial site before the risk of large loss of human life and property in the event of flooding is reduced.		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (SAC) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Rambar) Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Sarah Tule				S402 - New Spitalfields Market	Yes	No	Yes	<p>Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing, in the north of the borough. Developments must be designed to 'minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, to the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.</p> <p>The proposed development at S402 - New Spitalfields Market will put the population pressure on the surrounding marshland, with 2,750 homes bringing an estimated 5000 more people to the area, alongside an increase in domestic parks. This population increase will in turn increase congestion, air, noise and light pollution on the vulnerable marshland area if it is not. The proposed site is a vulnerable river environment, with the historic side of the Old River Lea being a Site of Importance for Nature Conservation (SINIC), yet there is no adequate mention of this conservation status in the proposal. It is around the Epping Forest area. This use of this site to house another 5000 people is putting huge population pressure on a vulnerable SINIC that will not be able to withstand the weight of increased pollution and population density, therefore I wish to object to this proposal as it is unsound.</p>	<p>The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parks, lighting and the impact of tall buildings. If the green spaces near a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refrained. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create goods railway link to the site, with no residential neighbours. This would be a suitable modification.</p> <p>The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parks, lighting and the impact of tall buildings. If the green spaces near a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refrained. I suggest that this site be returned to marshland land to protect conservation status as a SINIC. Failing that, the site should be left as it is, as is low rise locally significant industrial site that Waltham Forest needs, away from tall buildings. This would be a suitable modification.</p>			<p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC).</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar).</p> <p>Through the evidence published in the Character Identification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. Rebecca Jennings				S402- New Spitalfields Market	No	No	No	<p>Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to have different approaches to the borough's unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes. I object to the plans S402 - New Spitalfields Market. The tall towers proposed (and the high population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 1000 clinical studies in the last 5 years alone. The open green spaces of the Marshes has been a catalyst for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open spaces of the Marshes, not just during covid but the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of tower blocks along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals. The proposed site S402 - New Spitalfields Market is located on a known Flood plain. If it is built on, this site will be there for many years to come. With more extreme weather, river and tidal rises that</p>	<p>The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by a increase in the number of people, in the number of pets, lighting and the impact of tall buildings. If the green spaces near a proposed development cannot sustainably absorb the impacts of the development, when the Marshes, certainly east, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification. The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good railway link to the site, with no residential neighbours. This would be a suitable modification. I would suggest that the site be returned to marshland in light of the flood risk this area is under, especially with the potential of rising sea levels.</p>	No		<p>The HRB for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC)</p> <p>The HRB for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. Minaa Herrison				S402- New Spitalfields Market	No	No	No	<p>Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces is essential for physical and mental health and wellbeing. In the north of the borough developments must be designed to minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However in the south of the borough access to the marshes in being used to support intensive development. Already the new tower blocks on Lee Bridge road by the station has changed the skyline for the north by day and night. Protecting Epping Forest is essential but it is also essential to protect the marshes. To have different approaches to the borough's unsound. While protecting Epping is driven by legislation there is no reason why the same approach cannot be taken towards the Marshes. The Marshes are used by such a diverse community of all ages for diverse range of activities and is a haven for disadvantaged community at King's park area. It needs to be protected.</p>	<p>The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by a increase in the number of people (the number of pets, lighting and the impact of tall buildings). If the green spaces near a proposed development cannot sustainably absorb the impacts of the development, when the Marshes, certainly east, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Kate				S402- New Spitalfields Market	No	No	No	<p>Too tall. Too many developments. Not affordable for real people. Loss of trees and light for others. Eye sore on green space enjoyed by thousands. Bad for birds and wildlife</p>	<p>Lower heights. Make it Council owned</p>	No		<p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The London Plan (2021) sets a 20 year minimum housing target for Waltham Forest of 1,240 new homes (1,264 per year) based on a London-wide assessment of capacity/available sites in 2017/18. The original draft London Plan figure was equivalent to approx. 1,800 homes per year, but targets were downgraded across London by the Planning Inspectors examining the London Plan as the formula used to calculate supply from unmet sites was not shown to be justified. The revised target falls short of the Council's identified housing need of 1,810 new homes per year, as well as the London Plan identified need for 65,000 homes per year across London.</p> <p>There are many definitions of affordable housing. Because of the severity of the housing crisis, an increasing number of households on a range of income are affected. This means a range of options are needed. Low-cost rent including Social Rent and London Affordable Rent will form the basis of genuinely affordable homes, however intermediate housing can and will still play an important role. Shared Ownership for example, supports home ownership aspirations for people who might otherwise struggle to get on the housing ladder.</p> <p>The allocations require affordable housing in line with the policy approach set out in Local Plan 1.</p> <p>The Local Plan requires that any new development must respect the amenity of existing residents and avoid harmful impacts from overlooking, enclosure, loss of privacy and loss of daylight/sunlight.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p> <p>The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.</p>
Cathryn Badden				S402- New Spitalfields Market	Yes	No	Yes	<p>I can not support the plan as set out in S402 - New Spitalfields Market, proposed density of the residential buildings will destroy the open space and biodiversity the Marshes provide. Environmentally the Hackney Marshes are unique and vital for London as it provides crucial open supports the biodiversity of millions of living species. Hackney Marshes and its nature, as our large wetland. Once the open space and the biodiversity has been destroyed it can not be replaced. The importance of having nature as a place to escape the stresses of urban living has particularly become apparent during Covid and the NHS are prescribing nature and being out in the open as a vital way to support mental health. For these reasons I believe these S402 proposals are completely unsound.</p>	<p>Destroying nature to this extent must not go ahead and is not sound. Leaving the Hackney Marshes as they are and respecting the benefits of the open Marsh land is completely sound. Supporting the light industrial usage would support more jobs to be economically beneficial.</p>	No	Options need to be heard	<p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. If yes, please explain why?	Council's response
Ian Watson				S402 - New Spitalfields Market	Yes	No	Yes	The proposed development of 2,750 new homes represents an over development of the site and will place massive population pressure on the area. In addition the proposed buildings are likely to be on the region on 18-30 streets. Both the scale of the population increase and the height of the buildings represent a significant threat to the adjoining Hackney Marshes, a sensitive area of public open space, which should be protected. The site is also on a flood plain and the recent flooding events in parts of Waltham Forest have shown that there is a real danger from flooding in the area, particularly with the onset of climate change. This proposal does not seem to fit in well with the Council's declaration of a 'Climate Emergency'.	The site should be left as it is, a light industrial estate.		Because I live in this part of the borough and want my vote heard: Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. Through the evidence published in the Character Intensification Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). The London Plan (2021) sets a 10 year minimum housing target for Waltham Forest of 12,646 new homes (1,264 per year) based on a London-wide assessment of capacity/available sites in 2017/18. The original draft London Plan figure was equivalent to approx. 1,800 homes per year, but targets were downgraded across London by the Planning Inspectors examining the London Plan as the formula used to calculate supply from small sites was not shown to be justified. The revised target falls short of the Council's identified housing need of 1,810 new homes per year, as well as the London Plan identified need for 65,000 homes per year across London.	
Eleanor Ferryhough				S402 - New Spitalfields Market	Yes	No	Yes	The proposed development at S402 - New Spitalfields Market will put huge population pressure on the surrounding marshland, with 2,750 homes bringing an estimated 5000-6000 more people to the area, alongside an increase in domestic cars. This population increase will in turn increase congestion, air, noise and light pollution on the vulnerable marshland area it sits on. The proposed site is a vulnerable river environment, with the Hackney side of the Old River Lea being a Site of Importance for Nature Conservation (SIN), yet there is no adequate mention of this conservation status in the proposal or it is around the Epping Forest area. This use of the site to house another 5000-6000 people is putting huge population pressure on a vulnerable SIN that will not be able to withstand the weight of increased pollution and population density, therefore I wish to object to this proposal as it is unsound. Further to the impact on local nature/biodiversity, the impact of the new development on the area as a green space where urban residents can reconnect with nature, something that has a positive effect on mental health, would be damaging.	would suggest that the site be returned to marshland in light of the flood risk this area is under, especially with the predicted changes that will occur in the coming years with climate change. The site as marshland has the potential to absorb rising levels of water (its estimated that 1 tree absorbs 1,000 gallons of water a year) and protect other areas of the borough from flooding, while also thriving as a site of biodiversity that marshland brings. Failing this, I suggest the site be left as it is, as a light industrial site where the risk of large loss of human life and property in the event of flooding is reduced.	Yes		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). Through the evidence published in the Character Intensification Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The new Local Plan has stringent environmental standards, including with respect to pollution. It requires that development should meet or improve upon air quality neutral standards over the lifetime of a development and does not contribute to a decrease in air quality during the construction or operating stages of development. The Local Plan requires that any new development must respect the amenity of existing residents and avoid harmful impacts from overlooking, enclosure, loss of privacy and loss of daylight/sunlight. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. In April 2025, The Council declared a Climate Emergency. Reducing private car travel will improve air quality by reducing air pollution. This will also be beneficial for the health of our residents. Most residential development proposed within the Plan is car-free and employment development is car-capped. Additionally, the Policies in Local Plan Part 1, ensure that development coming forward in the borough meets and where possible improves air quality standards over its lifetime and does not contribute to a decrease in air quality during the construction or operation stage as a passive measure.
Anna Povey				S402 - New Spitalfields Market	No Response	No	No Response	2,750 homes: massive population pressure on Hackney Marshes Tall buildings: 18-30 storeys (obstructing sky line, horizon and taller than people want to live in) Construction of bridge over River Lea Site is floodplain: risk of river/flood flooding Increased congestion: Ruckholt Road Draft skyline notes, sensitivities of river and marshes but highlights site as gateway to borough and views of, not from, the Marshes	Return to marshland to protect the habitat for future Or Leave as is	No		Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. As set out in the Local Plan, all new residential development within the borough is required to be car-free. Moreover, developers will have an obligation to incorporate provision for accessible cycle storage and Car Clubs within their proposals. These provisions are strategically designed to encourage and support sustainable and active transport, ultimately resulting in a network of alleviation of congestion, parking problems and improve air quality. Additionally, Waltham Forest Waste and Recycling guidance for the developers sets out operational requirements and measures to enable safe, regular and easy refuse collections and to alleviate traffic congestion. Moreover, the Local Plan directs planned growth to previously developed sites that are currently under-occupied and tend to generate high numbers of private car/motorised vehicle trips. Redevelopment of these sites in accordance with Local Plan policies should significantly reduce vehicle traffic across the borough. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar).
Sophie Ryan				S402 - New Spitalfields Market	Yes	No	Yes	It is not considered SOUND to build high-rise buildings next to an open space marsh - this drastically reduces people's sense of open space which is highly limited in central London. Not to mention the risk to nature, soil and creatures who inhabit nearby. The relationship between people and green spaces should be consistent across the borough. It also poses challenges with congestion in nearby areas, as well as increased human-impacted pressure on the land itself (i.e. increased foot traffic, littering etc). The site is also floodplain: there's huge risk of flooding here and should not be considered sound for large scale development	consider returning to marshland in light of flood risk, and support local wildlife endeavours.	No		Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.

Ria Hathery				S402- New Spitalfields Market	Yes	No	Yes	The proposed development at S402 - New Spitalfields Market will put huge population pressure on the surrounding marshland, with 2,750 homes bringing an estimated 5000-6000 more people to the area, alongside an increase in domestic pets. This population increase will in turn increase congestion, air, noise and light pollution on the vulnerable marshland area it sits on. The proposed site is a vulnerable river environment, with the Hackney side of the Old River Lea being a Site of Importance for Nature Conservation (SINC), and there is no adequate mention of this conservation status in the proposal as it is around the Epping Forest area. This use of this site to house another 5000-6000 people is putting huge population pressure on a vulnerable SINC that will not be able to withstand the weight of increased pollution and population density, therefore I wish to object to this proposal as it is unsound.	The relationship between people and green spaces should be consistent across the Borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of pets, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, as in the case of Marshes car, then the development should be refrained. I suggest that this site be returned to marshland land to protect its conservation status as an SINC. Failing that, the site should be left as it is, as a low rise locally significant industrial site that Waltham Forest needs anyway, that has minimal impact on the vulnerable river environment it sits on.	No		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The NHA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and farmland) Through the evidence published in the Character Intensification Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development of higher density is required on some sites identified within strategic locations such as town and district centres and is close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The new Local Plan sets stringent environmental standards, including with respect to pollution. It requires that development should meet or improve upon air quality neutral standards over the lifetime of a development and does not contribute to a decrease in air quality during the construction or operating stages of development.
Jennifer Russett				S402- New Spitalfields Market	No	Yes		Green spaces are essential for our physical & mental health, which has been especially evident during the pandemic. Epping Forest is a protected green space, so I feel like a contradiction that the marshes aren't being treated the same way. London already lacks open spaces, to fill the area with tower blocks would take away a natural space that offers an escape for the open skies and nature. I also have concerns about the implications of building on floodplains - given the clear signs of climate change and increased flooding in recent years, doesn't seem safe to build homes there.	Ideally, the area would be returned to marshland, providing a space for more nature, biodiversity, and an area where more people can reap the benefits to their mental & physical wellbeing. Failing that, it should be kept as a light industrial area, reducing the environmental impact & also avoiding any risk from building on floodplains.	No		The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1; Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.
Ruby Swales				S402- New Spitalfields Market	Yes	No	Yes	Tall buildings 18 - 30 storeys will reduce sense of openness of Marshes vulnerable river environment - Hackney side the Old River Lea is Site of Importance for Nature Conservation (SINC) - plan indicates bridge to be a floodplain, risk of river/tidal flooding - extreme weather more likely with climate change Increased congestion, air pollution in Ruckholt Rd Draft NHA/notes notes sensitivities of trees and marshes but highlights site as "gateway to Borough and views of, not from, the Marshes. This is a major issue and this site is not a cluster unlike Stanford or City of London	Option 1: Return to marshland in light of flood risk Option 2: Leave site as is, as a light industrial site Option 3: If absolutely necessary/massively reduce scale of development, and create more open space/leisure use with climate change	No	other people can represent this view	Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and is close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1; Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. As set out in the Local Plan, all new residential development within the borough is required to be car-free. Moreover, developers will have an obligation to incorporate provision for accessible cycle storage and Car Clubs within their proposals. These provisions are strategically designed to encourage and support sustainable and active transport, ultimately resulting in a new diversity of congestion, parking problems and improve air quality. Additionally, Waltham Forest Waste and Recycling guidance for the developers sets out operational requirements and measures to enable safe, regular and easy refuse collections and to alleviate traffic congestion. Moreover, the Local Plan directs planned growth to previously developed sites that are currently under-utilised and tend to generate high numbers of private car/motorised vehicle trips. Redevelopment of these sites in accordance with Local Plan policies should significantly reduce vehicle traffic across the borough.
Emma Howard				S402- New Spitalfields Market	Yes	No	Yes	The proposed site S402 - New Spitalfields Market is located on a known flood plain. If it is built on, this site will be there for many years to come. With more extreme weather, river and tidal flows that are predicted with climate change, there is a severe risk of flooding on this site. Should the London barrier ever fail, it is also at risk from tidal flooding. I therefore object to the proposed plans for the S402, as building over 2,750 homes, with a predicted population increase of 5000-6000 people, on a known floodplain is unsound.	I would suggest that the site be returned to marshland in light of the flood risk this area is under, especially with the predicted changes that will occur in the coming years with climate change. The site as marshland has the potential to absorb rising levels of water (its estimated that 1 tree absorbs 11000 gallons of water a year) and protect other areas of the borough from flooding, while also bringing a site of biodiversity that marshland brings. Failing this, I suggest the site is left as it is, as a light industrial site where the risk of large loss of human life and property in the event of flooding is reduced.	No	It is important for communities to be involved with the future of their area and representatives with expertise in many areas is vital for decisions and just being made around profit.	Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and is close proximity to transport hubs. Nalin Peries				S402- New Spitalfields Market	Yes	No	<p>A huge reason this area is so attractive for young professionals and for developers is the marshes. It's such a special place to have this amazing green area in an inner city location. It's clear to see countless benefits that this area brings to the mental and physical health of local residents. It provides a space where people can go to clear their minds through exercise or going for a stroll, playing football, or simply sitting on a bench and appreciating how lucky you have to be to have close access to such a magnificent greenspace. The reason the marshes is so significant is because building developments have been restricted, protecting a great area where nature can thrive more. People need to be able to be somewhere without building developments and build new housing paving down on them; compacting their scope of view. The marshes must be left alone, it is a gem, cherished by thousands and it cannot be covered by developments that begin delineating the space before creeping in, cluttering the space and along with it the biodiversity and capacity for peace and quiet. The marshes cannot lose to the relentless pursuit of money and comfort. These houses will contribute to the needs of local residents. The price of the developments (thousands of new homes, a nursery, bus lane, infrastructure, etc.) although are good, they are greatly outweighed by the concomitant negatives I've stated here. It will create more congestion. It will reduce biodiversity. It will cause protests. It must be left in peace.</p>	This plan should not go ahead. We must realise how important green space is and appreciate it entirely, not reduce it.	No		<p>The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the Borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINCS), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development.</p> <p>The Local Plan policy Biodiversity and Greenways will seek to protect and enhance biodiversity and greenways resources throughout the Borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green 'buffer' and 'corridors', 'wild' public amenity, green roofs and tree planting which will produce biodiversity net gain sites.</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>The site allocation requirement ensures the provision of leisure uses. The Borough's Local Plan also has a policy on preserving existing parks and open spaces and enhancing access for leisure, sport and recreation. The Council is committed to ensuring that there is adequate provision of recreational spaces, indoor and outdoor sports facilities and parks for all sections of the community. Where sites that have an existing leisure facility use come forward as a site allocation (for example sports centres) provision of the leisure facility is a policy requirement to preserve the existing level of provision of playing pitches.</p>
Katrina Duncan				S405- New Spitalfields Market	Yes	No	<p>The importance of open, green spaces to mental health has been particularly highlighted in the last two years of coronavirus impact; while the pandemic may be easing, many other pressures continue to make it vital that inner city residents have easy access to open spaces. Likewise, it is essential that we protect and "re-wild" much of our natural environment and return the site to natural marshland is the optimum way to achieve this. Additionally, the proposed site is located on a flood plain - with any buildings erected there at severe risk of flooding as we experience more extreme weather linked to climate change.</p>	consider that the best option for the site is to return it to marshland, to protect residents from flooding and supporting a thriving biodiversity. Failing this, returning to use as a light industrial site would reduce the risks caused by flooding in a densely populated residential area.	No		<p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. If yes, please explain why?	Council's response
				S402- New Spitalfields Market	No	Response	No	<p>I believe that this development is unsound. It would crowd out and over shadow urban wild areas and have a significant impact on the historic and natural setting of Hackney marshes, an area which is already being lost. I am particularly worried about the additional bridges across the old River as this will have significant impact on the banks and the wildlife. The plan calls for tall buildings which will tower over this area of urban space. Hackney Road is already heavily congested at weekends with accessing shopping at Leyton Mills so I am also concerned about the plans for more shops in this development.</p>	To reduce the height of the towers so they fit with the current tree line and are out of sight of the marshes and River Lea.			<p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The NPA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar).</p> <p>The local plan policy Biodiversity and Greenheritage will seek to protect and enhance biodiversity and geodiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green 'buffers' and 'corridors', 'wild' public amenity, green roofs and tree planting which will produce biodiversity net gain on sites.</p> <p>As set out in the Local Plan, all new residential development within the borough is required to be car-free. Moreover, developers will have an obligation to incorporate provision for accessible cycle storage and Car Clubs within their proposals. These provisions are strategically designed to encourage and support sustainable and active transport, ultimately resulting in a noteworthy alleviation of congestion, parking problems and improve air quality. Additionally, Waltham Forest Waste and Recycling guidance for the developers sets out operational requirements and measures to ensure safe, regular and easy refuse collections and to alleviate traffic congestion. Moreover, the local Plan directs planned growth to previously developed sites that are currently under-utilised and tend to generate high numbers of private car/motorised vehicle trips. Redevelopment of these sites in accordance with Local Plan policies should significantly reduce vehicle traffic across the borough.</p>
Chris James				S402- New Spitalfields Market	No	Response	No	Please stop building hulking great towers that can only be bought by the rich, ESPECIALLY when they are right next to one of the few large open green spaces in London.				<p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>There are many definitions of affordable housing. Because of the severity of the housing crisis, an increasing number of households on a range of income are affected. This means a range of options are needed. Low-cost rent including Social Rent and London Affordable Rent will form the basis of genuinely affordable homes, however intermediate housing can and will still play an important role. Shared Ownership for example, supports home ownership aspirations for people who might otherwise struggle to get on the housing ladder.</p> <p>The allocations require affordable housing in line with the policy approach set out in Local Plan 1.</p> <p>The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area with the identified Site of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINC), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development.</p>
Varisa Marks				S402- New Spitalfields Market	No	Response	No	<p>These developments remove biodiversity from our city at the exact moment that we are in a climate and ecological emergency. Building new infrastructure that tramples all over biodiversity, nature, wildlife and green spaces is other madness. The climate crisis will result in more floods, exactly what marshes are designed to mitigate. Habitat loss is causing the sixth mass extinction of species. Additional carbon emissions brought about by building work will increase global warming and mean the borough misses its carbon reduction targets. Wide open green spaces much needed to alleviate the stresses of mental health will be lost. Instead of these mitigated attempts to develop green spaces please please spend your money on converting office space or retail space or car parks or converted residential that is no longer needed due to the effects of the pandemic. You must listen to your residents and your neighbours and we say no!</p>	Modify this by moving your plans to existing converted spaces. Do not pour more concrete into the Earth. There is concrete everywhere: old offices, old retail parks, old car parks, industrial wastelands, and shops, neglected housing. Please convert these existing buildings to liveable spaces. Do. Or destroy nature parks to tick a box of new build housing. What about the tick box that says you must protect biodiversity and you must reduce carbon emissions? Are you tick the box? We have under ten years to slow the rate of global heating before it's too late and the catastrophic changes become irreversible. Do your bit Waltham Forest.			<p>The NPA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar).</p> <p>The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.</p> <p>In April 2020, The Council declared a Climate Emergency. In the chapter in Local Plan Part 1 entitled Addressing the Climate Emergency, The Council sets out a strategic objective to build the borough's climate change resilience by targeting net-zero carbon emissions by 2030. This will be achieved by delivering more energy efficient development that is constructed to a more sustainable design and where possible connect, whether it is new build or the retrofitting of existing property, reducing the dependency on cars by encouraging modal shift to more active forms of transport such as walking and cycling, consuming less and recycling more which is in line with the GVA's Circular Economy Statement and the promotion of nature, health and wellbeing to increase resilience against climate change conditions such as heatwaves and flooding.</p> <p>Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.</p> <p>In April 2020, The Council declared a Climate Emergency. In the chapter in Local Plan Part 1 entitled Addressing the Climate Emergency, The Council sets out a strategic objective to build the borough's climate change resilience by targeting net-zero carbon emissions by 2030. This will be achieved by delivering more energy efficient development that is constructed to a more sustainable design and where possible connect, whether it is new build or the retrofitting of existing property, reducing the dependency on cars by encouraging modal shift to more active forms of transport such as walking and cycling, consuming less and recycling more which is in line with the GVA's Circular Economy Statement and the promotion of nature, health and wellbeing to increase resilience against climate change conditions such as heatwaves and flooding.</p> <p>Through the evidence published in the Character Intensification Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p>
Emily Baker				S402- New Spitalfields Market	Yes	No	Yes	<p>The proposed site S402 - New Spitalfields Market is located on a brown flood plain. If it is built on, this site will be there for many years to come. With more extreme weather, rise and tidal seas that are predicted with climate change, there is a severe risk of flooding on this site. Should the London barrier ever fail, it is also at risk from tidal flooding. I therefore object to the proposed plans for site S402, as a building over 2,700 homes, with a predicted population increase of 5000-6000 people, on a known floodplain is unsound.</p>	I would suggest that the site be returned to marshland in light of the flood risk this area is under, especially with the predicted changes that will occur in the coming years with climate change. The site as marshland has the potential to absorb rising levels of water (its estimated that 1 tree absorbs 11,000 gallons of water a year) and protect other areas of the borough from flooding, while also bringing a site of biodiversity by the marshland brings. Failing this, I suggest the site left as it is, as a slight reduction in what the risk of large loss of human life and property in the event of flooding is reduced.			<p>Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.</p> <p>In April 2020, The Council declared a Climate Emergency. Ashleigh Lawson				S402- New Spitalfields Market	Yes	No	Yes	The proposed site S402 - New Spitalfields Market is located on a known flood plain. If it is built on, this site will be there for many years to come. With more extreme weather, river and tidal rise that are predicted with climate change, there is a severe risk of flooding on this site. Should the London barrier ever fail, it is also at risk from tidal flooding. Therefore subject to the proposed plans for site S402, as a building over 2,750 homes, with a predicted population increase of 5000-6000 people, on a known floodplain is unsound.	I would suggest that the site be returned to marshland in light of the flood risk this area is under, especially with the predicted changes that will occur in the coming years with climate change. The site as marshland has the potential to absorb rising levels of water (its estimated that it can absorb 1,100 gallons of water a year) and protect other areas of the borough from flooding, while also thriving as a site of biodiversity that marshland brings. Failing this, I suggest the site is left as it is, as a light industrial site where the risk of large loss of human life and property in the event of flooding is reduced.	No		Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. In April 2019, The Council declared a Climate Emergency. In the chapter in Local Plan Part 1 entitled Addressing the Climate Emergency, The Council sets out a strategic objective to build the borough's climate change resilience by targeting net-zero carbon emissions by 2030. This will be achieved by delivering more energy efficient development that is constructed to a more sustainable design and where possible connect, whether it's new build or the retrofitting of existing property, reducing the dependency on cars by encouraging modal shift to more active forms of transport such as walking and cycling, consuming less and recycling more which is inline with the GVA's Circular Economy Statement and the promotion of nature, health and wellbeing to increase resilience against climate change conditions such as heatwaves and flooding. Through the evidence published in the Character Interference Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.

By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
Neo Villamerside				S402- New Spitalfields Market	Yes	Yes	The tall towers proposed will destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. For so many of us local residents the Marshes helped to improve mental health and wellbeing to being able to access the open space. These proposed tower blocks will completely destroy that. These plans are harmful as they will undoubtedly lead to a loss of towers all along the east side of the Marshes and will devastate the open space and biodiversity of the area, there is a completely unsound to bring these plans forward and subject to these proposals.	I suggest that the site is returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident, especially in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity.	No		Through the evidence published in the Character Identification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/unrourning sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
				S402- New Spitalfields Market	No	No	subject to the plans at S402 - New Spitalfields Market. The tall towers proposal (and the huge population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by numerous clinical studies. The open green space of the Marshes has been a lifeline for so many of us local residents and provides children a much needed connection to nature. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during the recent pandemic, but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a loss of towers all along the east side of the Marshes, to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and therefore subject to these proposals.	The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites, this is already a low rise employment site. Locally significant industrial sites with good road (A12) connections with the potential to create good quality links to the site, with no residential neighbours. This would be a suitable modification	No		Through the evidence published in the Character Identification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. Tara				S402- New Spilfields Market	No	No	No	Waltham Forest is seen to be a green borough with a progressive and environmentally aware council. This is what attracted me to live here. The proposal to erect blocks of flats, what are deemed to be "tower" apartments (which won't be affordable and will instead be luxury) is not in line with respecting or protecting nature. Wild, green spaces are absolutely essential for mental health, and whilst London has lots of parks, this kind of wild space with rich biodiversity that is open and accessible to all is very rare in London. Tall buildings will cast a shadow, and 2750 flats mean up to 5-6000 more people on this small area in a short space of time. With that being said, park, water and noise pollution. This area is also a floodplain, made of marshland which absorbs flooding. By concreting over the marsh increases the risk of flooding	Keep the marshes as they are with light industrial buildings. Green spaces need to be protected during the climate crisis, not eradicated.			Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. Through the evidence published in the Character Intensification Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Henry N				S402- New Spilfields Market	No	No	No	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green space, is essential for physical and mental health and wellbeing, in the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have been different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No	To ensure that it complies	The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC). The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINCs), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.

This policy will apply to all new development sites in the Borough.
Tony Wrang				S402- New Spilfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green space, is essential for physical and mental health and wellbeing, in the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have been different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes. I object to the plans at S402 - New Spilfields Market. The tall towers proposed (and the high population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green space. I acknowledge the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 2000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification. The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits of an open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create goods railway link to the site, with no residential neighbours. This would be a suitable modification. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good railway links to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.			<p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC)</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINC), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development.</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p>
				S402- New Spitalfields Market	No	No	No	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, to the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refused. Furthermore, these sites are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good railway links to the site, with no residential neighbours. Glan Sanghaia-Warren				S402- New Spitalfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The modifications I consider necessary to make the site returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open space has on our mental, physical and social health and the resultant pressure this takes of primary care services is evident. This is a particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest housing the site as, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good quality links to the site, with no residential neighbours. This would be a suitable modification.	No	-	<p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC)</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. This policy will apply to all new development sites in the Borough.</p>
Aurilia				S402- New Spitalfields Market	Yes	No	No Response	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refrained. Furthermore, these sites are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good quality links to the site, with no residential neighbours. Edina Muradajeva				S402- New Spitalfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, to the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refrained. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create goods railway links to the site, with no residential neighbours. C Martin				S402- New Spitalfields Market	Yes	No	Yes	<p>Think the size of the proposed development would be incredibly detrimental to a huge population who use the space for mental health and wellbeing. I work as a counsellor and regularly have clients who describe the positive and life changing effects of visiting open green spaces - often with particular reference to 'openness', 'wildness' and 'no horizons'. Tower blocks like this would not only totally ruin this sense of space, a real refuge for Londoners, but also bring a huge influx of population who the demographic close to the proposed high priced area are not necessarily those who would use the space, or most vulnerable. Additionally it seems impossible that the wildlife and biodiversity will be unaffected by these changes. I believe these plans are unsound and unethical, motivated only by money - I completely object.</p>	<p>Below the only justifiable plan would be to leave the site as it is. I do not see how any buildings of all, even unbuilt, would have the natural life that would be there and certainly have clients who describe the space as tact. The only reasonable reason to build here would be for pure social council housing - no purchasable properties at all. As this is not the intention at all, there is no moral grounds for the development.</p>			<p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Raja B				S402- New Spitalfields Market	No Response	No	No Response	<p>I object to these plans massively. I cannot actually believe that this is being proposed. We are in a Climate Emergency, we should re-create marshland, enhance biodiversity and not destroy the few green spaces we still have. The council did actually declare a Climate Emergency back in April 2019. How do those plans go together?</p> <p>Having gone through many painful lockdowns, we realised how much green spaces are needed for our mental health - our health in general. I for one, did walk around the marshes on a daily basis to keep sane. Once again, we urgently need to protect the spaces we still have and create new ones. The marshes should be legally protected the Esping Forests.</p>	<p>The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure to take off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites, this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good quality railway links to the site, with no residential neighbours. This would be a suitable modification.</p>	No		<p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Lynsey Banks				S402- New Spitalfields Market	Yes	No	Yes	<p>The tall towers proposed (and the huge population increase this will bring to the area) will destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. I have enjoyed visiting the area and watching wildlife, including the elusive kingfisher and this had a very positive impact on my own mental health and wellbeing during the pandemic, and I'm sure it helped for many others. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 2000 clinical studies in the last 5 years alone. These tower blocks would devastate the open space and biodiversity of the area making the plan completely unsound and I object to these proposals.</p>	<p>Naturally there is a drive toward rewilding, the government and local councils acknowledge the importance of this across the country. The main modification I suggest is that the site be returned to marshland. The benefits that open marshland has for the local and wider community and the resultant pressure to take off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites, this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good quality railway links to the site, with no residential neighbours. This would be a suitable modification.</p>			<p>Through the evidence published in the Character Identification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocation document (Local Plan Part 1) sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocation document (Local Plan Part 2) means that through development by infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The IDP for this document considers that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar).</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. This policy will apply to all new development sites in the Borough.</p>
Helen Cheyne				S402- New Spitalfields Market	No Response	No	No Response	<p>I am writing as a member of Save Lee Marshes, a local open space campaign seeking to protect the Marshes. I have already attended consultations with Waltham Forest on this site as a representative of Save Lee Marshes.</p> <p>The Site Allocation is unsound for the following reasons</p> <ol style="list-style-type: none"> 1. Flooding risk <p>We are constantly warned of the danger of building on floodplain, yet we continue to do it. Local authorities like Waltham Forest are declaring Climate Emergencies. What does this mean, or should mean, for a site New Spitalfields? If declaring a Climate Emergency means anything how can a local authority like Waltham Forest build a massive housing development on a floodplain?</p> <p>This is most definitely floodplain and Leyton is considered an "actual flood risk. New Spitalfields is right on the Lee Valley floodplain.</p> <p>In its 2013 Local Flood Risk Management Strategy document Waltham Forest states: Management Strategy Summary of Flood Risk Management Strategy Summary</p> <ol style="list-style-type: none"> 1.3 The rise in extreme weather conditions, the presence of existing buildings in areas of flood risk, and limited public funding, means that we cannot stop all flood incidents happening in the borough. <p>Waltham Forest seem to be adopting a fatalistic attitude towards flooding. If they recognise they cannot stop flooding better surely not to add new sites to those it already believes is cannot protect.</p>	<p>1. Modification: Site allocation as open space and wetland" return to marsh</p> <p>The best use of New Spitalfields is to return to marshland and open space. In this form it can serve as a reservoir for absorbing flood water. This is an important economic as well as environmental benefit. Should a serious flood occur in the Lee Valley, and the possibility has to be taken seriously, protection of the surrounding area is an important matter and this site, if developed with this in mind, would be used most sensibly as wetland to help absorb floodwater. This would also be an important wetland ecological site complementing the rest of the Marshes. To return it to nature with the purpose of treating it as a wetland would return it to its original state.</p> <p>As open space and wetland this site would also be useful for people to enjoy for recreation. The social, physical and mental health benefits and resulting economic benefits and savings of green open space are well established. New reports continually attest to these benefits and need to be taken seriously when planning for the future in a time of increasing climate stress and danger. South Waltham Forest is a deprived and crowded part of the Borough. Green open spaces are of even greater importance for such parts of the Borough. Land in such a critical location needs to be used with care.</p> <p>The Marshes are an amenity for a wide area, not just the immediate locality. The Lee Valley is not only a place for people to enjoy, it also helps reduce air pollution for this part of North and East London. Not for nothing it is known as the Green Lung. Building more housing, with its attached cars, on such an important site will also have very serious negative impacts on this beneficial environment.</p>	No	<p>I am a member of Save Lee Marshes and am concerned for the future of open spaces in this part of London</p>	<p>Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.</p> <p>The Council considers that the application of the approach set out in Policy 93 addresses all concerns raised by the Environment Agency who has been endorsed in writing in their letter of 23 January 2023 submitted in response to the M6C Stage 2. As with the WPP, the application of a sequential, risk-based approach to the location of development ensures that development does not occur in flood zone 3b. Paragraph 364 and 365 are directly reflected in the wording of part C and D of the policy. It is considered that the wording of C - Reporting site-specific risks to provide sufficient detail to assess the risk of flooding, and arising from, development proposals from all sources, considering flood risk now and in the future means the proposed addition is not necessary. Greenfield run-off rate is explained in detail in the supporting text proposed in MM179. No further modifications are considered necessary.</p> <p>In April 2020, The Council declared a Climate Emergency. In the chapter in Local Plan Part 1 entitled Addressing the Climate Emergency, The Council sets out a strategic objective to build the borough's climate change resilience by targeting net zero carbon emissions by 2030. This will be achieved by delivering more energy efficient development that is constructed to a more sustainable design and where possible connect, whether it is new build or the retrofitting of existing property, reducing the dependency on cars by encouraging modal shift to more active forms of transport such as walking and cycling, consuming less and recycling more which is in line with the GLA's Circular Economy Statement and the promotion of nature, health and wellbeing to increase resilience against climate change conditions such as heatwaves and flooding.</p>

No Sparks				S402- New Spitalfields Market	No	No	<p>There is no evidence the plan "responds to the sensitive context of the Hackney Marshes nor is it clear how it will "provide a new significant green public park with an ecological focus on public park is not marked within site boundary"</p> <p>The scheme claims to "improve the River Lea habitat - upon there is no evidence how it plans to do this - reflect during the lengthy construction period the River Lea habitat will be seriously disrupted."</p> <p>London Assembly is committed to tackle the climate emergency. "One of the actions is to "Make London Greener saying</p> <p>"The pandemic highlighted how important nature is for Londoners health and wellbeing. We're committed to going all Londoners access to green space within 10 minutes of where they live.</p> <p>"Green spaces and trees are also crucial in our fight against climate change. They help keep our city cool and tackle flood risk by absorbing rainwater. Trees also help clean the air and absorb carbon dioxide from the atmosphere. That's why we've planted a record 340,000 trees in London since 2016."</p> <p>(https://www.london.gov.uk/what-we-do/environment/climate-change/what-maps-against-climate-change)</p> <p>"This proposal directly contravenes the London Assembly's aim.</p>	<p>In the interest of biodiversity and keeping areas of London green I suggest are that the site be returned to marshland.</p> <p>The increasing sale of housing materials during the pandemic showed what a vital resource the site is for locals and visitors alike offering a feeling of escape, being in a wilder type of nature than a traditional park. Starting at over a million heavily glazed buildings, overlooking the marshes will seriously undermine the feeling of having got away from the city.</p> <p>In addition: London population is dropping - is there any evidence this scheme is financially viable or even needed?"</p> <p>(https://www.theguardian.com/uk-news/2021/jun/07/london-population-decline-first-time-since-1988-report-covid-home-working)</p>	No		<p>The local plan policy Biodiversity and Greenways will seek to protect and enhance biodiversity and geodiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green "buffers" and "corridors," wild public amenity, green roofs, and tree planting which will produce biodiversity net gain on sites.</p> <p>In April 2019, The Council declared a Climate Emergency. In the chapter in Local Plan Part 1 entitled Addressing the Climate Emergency, The Council sets out a strategic objective to build the borough's climate change resilience by targeting net-zero carbon emissions by 2030. This will be achieved by delivering more energy efficient development that is constructed to a new sustainable design, and where possible convert, whether it's new build or the retrofitting of existing property, reducing the dependency on cars by encouraging modal shift to more active forms of transport such as walking and cycling, consuming less and recycling more which is in line with the GVA's Circular Economy Statement and the promotion of nature, health and wellbeing to increase resilience against climate change conditions such as heatwaves and flooding.</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC)</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/unimpaired sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchment areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p>
Jake Crossland				S402- New Spitalfields Market	Yes	No	<p>I object to the plans at S402 - New Spitalfields Market. The tall towers proposed (and the huge population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces, it acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by 2020 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.</p>	<p>The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and local health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and mental health outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low employment site (locally significant industrial site) with good road (A12) connections with the potential to create goods railway links to the site, with no residential neighbours. This would be a suitable modification.</p>	No		<p>The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.</p> <p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver a higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/unimpaired sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchment areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p>
Laura Downing				S402- New Spitalfields Market	Yes	No	<p>I object to the plans at S402 - New Spitalfields Market. The tall towers proposed (and the huge population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces, rightly reflecting the importance of open green space and biodiversity for our mental and physical health. The open green space of the Marshes has been a saviour for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.</p>	<p>Reduce height significantly or return land to marshes</p>	No		<p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. This policy will apply to all new development sites in the Borough.</p>
Alice Bearn				S402- New Spitalfields Market	Yes	No	<p>Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for carbon effects to ensure no adverse effect on the Epping Forest SAC. However, at the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes and smaller scale parks such as Pocket Park that has been destroyed in this construction. To have two different approaches to the protection of green spaces in the borough is unsound. While protecting Epping Forest is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes and pocket park. Pocket park holds over 100 trees and its destruction will increase the likelihood of flooding in the area should the River Lea level therefore its lack of protection with the marshes, compared to Epping Forest is unsound.</p>	<p>The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parks, lighting, pollution and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes and Pocket Park can, then the development should be refused. These sites are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes and further destruction of local green spaces. I suggest the modification that this site be kept as R, that Queen Way Pocket Park is retained. The number of units and the size of the towers should be significantly decreased, to reduce population pressure on a vulnerable natural area that can absorb it. The figures reported for population increase are in line with pre-pandemic and pre-Renters statistics, which which understand are the official figures. It is clear that population increase at this site will not happen in the next 10 years, therefore the modifications suggested are sound.</p>	No		<p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC)</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse effect or indirect effect on the biodiversity or nature conservation value on any land or area with the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINC), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development.</p> <p>Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 91 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p>

Rebecca Stewart				SAC2- New Spitalfields Market	Yes	No	object to the plans at SAC2 - New Spitalfields Market. The tall towers proposed (and the huge population increase this will bring to the area) will completely destroy the areas of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 1000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a haven for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy this. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers at along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.	The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is a particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest housing the site as it is, a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. With our forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create good jobs (heavy to the site, with no residential neighbours. This would be a suitable modification.	No	-	Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). Through the evidence published in the Character Intensification Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
Janet Donalson				SAC2- New Spitalfields Market	Yes	No	Access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. Efforts are made to "mitigate" for urban effects to ensure no adverse effect on the Epping Forest SAC. The marshes should also be protected and not be used to support intensive development. Protecting Epping Forest SAC is driven by legislation, why is the same approach not taken towards that site. It is also found to build on marsh area giving rising water levels - worst flooding will be a risk. I therefore object to the proposed plans for SAC2 as building over 2,750 homes, with a projected population increase of 5000 people, on a brown floodplain is unsound. New Spitalfields Market will put high population pressure on the surrounding marshland, with 2,750 homes bringing an estimated 5000-6000 more people to the area, alongside an increase in domestic pets. This population increase will in turn increase congestion, air, noise and light pollution on the vulnerable marshland area it sits on. The proposed site is a valuable green environment, with the history side of the Old River being a Site of Importance for Nature Conservation (SINC), yet there is no adequate mention of this conservation status in the proposal. The tall towers proposed (and the huge population increase this will bring to the area) will completely destroy the areas of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 1000 clinical studies in the last 5 years alone	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of pets, lighting and the impact of tall buildings. These plans will lead to a line of towers at along the east side of the site. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create good jobs (heavy to the site, with no residential neighbours. This is compatible with open green spaces affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification. The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is a particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. The site as marshland has the potential to absorb rising levels of water (its estimated that it can absorb 11,000 gallons of water a year) and protect other areas of the borough from flooding, while also thriving as a site of biodiversity that marshland brings. The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of pets, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, as Hackney Marshes can, then the development should be reframed.	No	-	Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. Nigel Godfrey				SAC2- New Spitalfields Market	No Response	No Response	It's out of scale and will damage the local area. Hackney Marshes are a unique resource and environment in London. You are taking an area one third the size of East Village and trying to build the same number of homes on it. The stratified meadows, to which this should be related even though the planning authority is different due to the location of the borough boundary, has building heights decreasing as you move away from the high speed railway line. This site should fit in with that approach. There are no other tall towers nearby, other than one on Riddishall Road - 13 stories which already looks ugly and out of place. Proceeding with such a high density development will be creating a ghetto for the future.	Max of four stories per building.	No	-	Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. If yes, please explain why?	Council's response	
Francois Dismore				SAD2- New Spitalfields Market	No	No	The proposed development of the site is unsound for the following reasons: The site is floodplain the projection of both risk of river and tidal flooding is very likely given the disruption to weather systems due to climate change - the additional number of people and their parts being in the planned 2,700 homes with bridge access to the nearby Marshes will create substantial detrimental disturbance to the wildlife using this site of importance for Nature Conservation (NCC), the wooded area above the River Lea and the River itself at habitat the nearby Auisland Road sewer storm overflow. Home No. C58C585, opened 28 times for a total of 373 hours in 2020; the tall buildings will contribute significant light pollution too. The two tall buildings, of 18 to 30 stories, proposed will reduce the sense of openness of the Marshes MOC. The Core Strategy Document notes, southside of the river and marshes but highlights the site as 'gateway to the borough and only considers views of, not from, the Marshes.	Option 1: Return the site to marshland in light of flood risk or, in substantial part develop flood protection for neighbouring infrastructure enhancing the existing and biodiversity including daylighting the culverted river. Create sustainable urban drainage to reduce sewage spill and improve water quality of the London Lower Lea Catchment (e.g. further improving habitat for local wildlife such as our IUCN red-listed eels, Anguilla anguilla). Option 2: Leave the site as it is, as a low rise, light industrial site which is compatible with Open Land. Waltham Forest needs employment sites - this is already a locally significant industrial site with no residential neighbours, with good road connections (A12) and potential to create on-site goods (always) link. However augment the site with flood protection and SACs beneficial to biodiversity, the wider area and the Lower Lea Catchment as per Option 1.	Transparency is important for residents to witness who is setting our natural heritage, MOC, underpinning the designated protections afforded our green and blue spaces and enlarging our public health and climate resilience so that we can hold them to account.		Having site allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. Through the evidence published in the Character Intensification Study, The Local Plan policies have been prepared to ensure that on sites where higher density development needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure is identified in the Infrastructure Delivery Plan (IDP) can be secured. The IDPA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)	
Ana				SAD2- New Spitalfields Market	Yes	No	No	The plans are going to threaten biodiversity in an area that is already overpopulated and over used. The pandemic has taught us about the importance of communal green spaces and the new developments will be reducing the green spaces we so desperately need to protect in our communities. I appreciate there is an urgent need for social housing but there is also an urgent need to maintain our green spaces. The new developments would bring in 5000 to 6000 new people to an already overpopulated area.		Yes	-	The Local Plan policies that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. Through the evidence published in the Character Intensification Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure is identified in the Infrastructure Delivery Plan (IDP) can be secured. There are many definitions of affordable housing. Because of the severity of the housing crisis, an increasing number of households on a range of income are affected. This means a range of options are needed. Low-cost rent including Social Rent and London Affordable Rent will form the basis of genuinely affordable homes, however intermediate housing can and will still play an important role. Shared Ownership for example, supports home ownership aspirations for people who might otherwise struggle to get on the housing ladder. The allocations require affordable housing in line with the policy approach set out in Local Plan 1. The Local Plan sets out requirements in Policy 14 and 15 for the proportions of homes in a scheme which are expected to be low-cost rented, and which are to be intermediate and the expected mix of sizes. Variations are considered when they can be justified based on a number of factors including the location, area characteristics, design constraints, scheme viability and end-user affordability.
Talisa Crichton-Miller				SAD2- New Spitalfields Market	No Response	No	No Response	I believe this development is unsound due to being so close to Heddeny marshes which is such an important green space and vital to preserve its sense of openness. This is done to protect Epping Forest and from factories Marshes deserves the same protection. It's a vital resource to help people's health and well-being and I'm worried this development will impact on the feel of this space and ruin the feeling of openness and nature.	I suggest that the site be returned to marshland in light of the clear benefits open space has on our mental, physical and social health. Also building such a lot of new infrastructure on flood plain I think is foolish and unwise with the risks of climate change.	No		The IDPA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the Borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Site of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINC), Special Areas for Conservation (SAC), Ramsar sites, or Special Protection Area (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.
Larissa Lockwood				SAD2- New Spitalfields Market	Yes	No	Yes	Flood management, biodiversity, human health and well-being, temperature control, air pollution, green spaces are essential and we risk harming more people than helping by building on such spaces. Waltham Forest Council rightly acknowledges that access to green spaces particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is given legislation, there is no reason why the same approach cannot be taken towards the marshes. I object to the plans at SAD2 - New Spitalfields Market. The tall towers proposed (and the huge population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 3000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going	The relationship between people and green spaces should be consistent across the Borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people in the number of parks, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes currently can't, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (locally significant industrial site) with good road (A12) connections with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification. The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low rise employment site (locally significant industrial site) with good road (A12) connections with the potential to create goods railway link to the site, with no residential neighbours. This would be a suitable modification.	No	Most people don't even know about their planned developments and they are going to undermine their health and wellbeing and possibly flood their homes and livelihoods.	Having site allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The new Local Plan sets stringent environmental standards, including with respect to pollution. It requires that development should meet or improve upon air quality neutral standards over the lifetime of a development and does not contribute to a decrease in air quality during the construction or operating stages of development. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.

If yes, please explain why?	Council's response	
Charlie				S402- New Spitalfields Market	Yes	No	Yes	We need a stronger approach to protecting the marshes (Hoxney and Walthamstow) and it seems as though there is an inconsistency in the council's approach towards the protection of low value conservation sites in the borough. Epping Forest and the Marshes, which is slowly having creeping development appear from different sides. Local can no longer sit in the marshes without seeing tower blocks appearing on the edges in every direction and the impact upon nature wildlife and local citizens is enormous. These green spaces should be protected from increasing high rise development in particular, to preserve this vital resource as it is for future generations of Londoners.	More attention to people's wishes in relation to their own communities. People don't just want more development especially with high rises, to what are mostly low rise residential areas and industrial areas... Lower rise developments should, be prioritised, which cannot be seen from all angles and dominate over the only natural green space we have in this area. The marshes should be a place of refuge and are a vital resource for local people who use them. With developments appearing from every side, the number of people has increased exponentially and the impact this has on wildlife and local infrastructure is enormous. More consistency in approach towards conservation of green spaces across the borough, i.e. Epping and Marshes.			Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.
Marion O'Brian				S402- New Spitalfields Market	Yes	No	No	There is an inconsistency in the council's approach towards the protection of low value conservation sites in the borough. Epping Forest and the Marshes, where creeping development (some on flood plains) is appearing from different sides. This will have a negative impact on nature and local citizens. These green spaces should be protected from increasing high rise developments and preserved as the vital resource they are.	More attention to people's wishes in relation to their own communities, restricting the height of buildings to 5th floors, providing social and truly affordable housing. The marshes should be a place of refuge and are a vital resource for local people who use them and should be preserved.	No	-	Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.
Amy Bello				S402- New Spitalfields Market	Yes	No	Yes	The tall building suggested at S402 - New Spitalfields Market will put huge population pressure on the surrounding marshland, with 2,750 homes bringing an estimated 5000-6000 more people to the area, alongside an increase in domestic pets. This population increase will in turn increase congestion, air, noise and light pollution on the vulnerable marshland area if it sits on. The proposed site is a vulnerable river environment, with the Hoxney side of the Old River Lea being a Site of Importance for Nature Conservation (SINC), yet there is no adequate mention of this conservation status in the proposal as it is around the Epping Forest area. This use of this site to house another 5000-6000 people is putting huge population pressure on a vulnerable SINC that will not be able to withstand the weight of increased pollution and population density, therefore I wish to object to this proposal as it is unsound.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of pets, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, or existing Marshes can't, then the development should be reframed. I suggest that this site be returned to marshland land to protect conservation status as an SINC. Failing that, the proposed MP is a low rise density Significant Industrial Site that Waltham Forest needs anyway, that has minimal impact on the vulnerable river environment & sit on	No	Because its essential that the users of the marshes are heard and included in this	Through the evidence published in the Character Intersification Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure is identified in the Infrastructure Delivery Plan (IDP) can be secured.
Millic Rich				S402- New Spitalfields Market	No	No	No	object to the plans at S402 - New Spitalfields Market. The tall towers (and the huge population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have. That is unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 1000 clinical studies in the last 5 years alone. Alex Jones				S402- New Spitalfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to 'minimise access to Epping Forest' and 'mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, to the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes. The proposed site S402 - New Spitalfields Market is located on a known flood plain. If it is built on, this site will be there for many years to come. With more extreme weather, rain and tidal seas that are predicted with climate change, there is a severe risk of flooding on this site. Should the London Plan or any other plan, it is a clear risk from tidal flooding. Therefore I would suggest that the site be returned to marshland in light of the flood risk this area is under, especially with the predicted changes that will occur in the coming years with climate change. The site as marshland has the potential to absorb rising levels of water (its estimated that it now absorbs 1,000 gallons of water a year) and protect other areas of the borough from flooding, while also thriving as a site of biodiversity that marshland brings. Failing this, I suggest the site is left as is, as a light industrial site where the risk of large loss of human life and property in the event of flooding is reduced.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of cars, lighting and the impact of tall buildings. If green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers along the east side of the Marshes. I suggest the modification that this site be kept as is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good quality links to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No	-	The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC). The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.

Joseph Lewis				S402 - New Spitalfields Market	No	No	<p>Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.</p> <p>The proposed site S402 - New Spitalfields Market is located on a known flood plain. If it is built on, this site will be there for many years to come. With more extreme weather, river and tidal rises that are predicted with climate change, there is a severe risk of flooding on this site. Should the London barrier ever fail, it is also at risk from tidal flooding. Therefore subject to the proposed plans for site S402, as building over 2,750 homes, with a predicted population increase of 5000-6000 people, on a known floodplain is unsound.</p>	<p>The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refrained. Furthermore, these plans are harmful as they undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good railway links to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.</p> <p>I would suggest that the site be returned to marshland in light of the flood risk this area is under, especially with the predicted changes that will occur in the coming years with climate change. The site as marshland has the potential to absorb rising levels of water (its estimated that 1 tree absorbs 1,000 gallons of water a year) and protect other areas of the borough from flooding, while also thriving as a site of biodiversity that marshland brings. Failing this, I suggest the site is left as it is, as a light industrial site where the risk of large loss of human life and property in the event of flooding is reduced.</p>	No	I selected other as my gender is not the point. My sex is female.	<p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC)</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. 				S402- New Spitalfields Market	Yes	No	Yes	The plan is inconsistent with requirements for building around Epping Forest. Just as Epping Forest cannot have high-density and tall building built around it, neither should Hoxney Marshes.	Only very low density housing should be considered on the site. Otherwise it should be incorporated into Hoxney Marshes as additional green space, or converted into public/voicover, light commercial, or small business workshops.			The HMA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the Borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINCS), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development. Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
Nicholas Rogers				S402- New Spitalfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to 'minimise access to Epping Forest and 'mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of cars, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The HMA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC). The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Nicola Potts				S402- New Spitalfields Market	Yes	No	Yes	The size and scale (set out in the indicative development capacity) is not in keeping with the local area which includes the open green space and nature reserves of Hoxney and Waltham Marshes which neighbour the site. Development of this size and scale would threaten, rather than enhance, the special character of the local area which is a haven for wildlife, and an important open space for Londoners to enjoy nature.	The development opportunity should be scaled back with fewer units and without 'opportunities for height'.	No		Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. Through the evidence published in the Character Intensification Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
Nina Sprange				S402- New Spitalfields Market	No	No	No	The plans are unsound as they intend on infringing on green space used unilaterally by the public, improving not only the borough's biodiversity, but the well-being of its residents.	Protecting more of the green space and adding more affordable housing for the plans.	No		The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the Borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINCS), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development. The local plan policy Biodiversity and Goodiversity will seek to protect and enhance biodiversity and goodiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green 'buffers' and 'corridors,' 'wild' public amenity, green roofs and tree planting which will produce biodiversity net gain on site. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.

Caroline Day				S402- New Spitalfields Market	No	Response	No	<p>The Local Plan for the New Spitalfields site is unsound. The proposed 2,750 homes will constitute a massive population pressure on East Marsh, North and South Marsh of Hackney Marshes. With the current population, there is already unsustainable use and a damaging impact upon the sensitive river area, a Site of Importance for Nature Conservation, this reached a peak during lockdown, resulting in a large amount of anti-social behaviour, river bathing in polluted waters, a massive litter problem and erosion of the river banks. The population of local longhairs and small mammals suffered as a result. Hackney Council sustained a huge financial burden cleaning and attempting to manage the area. To add such a population directly adjacent to the marshes would not be ecologically sound, regardless of attempted mitigations. Adding a bridge over the River Lee will entail construction on a sensitive river habitat and will encourage further damaging recreational use of the area. Tall buildings of 18 - 30 storeys will reduce sense of openness of Marshes. The sense of openness of the Marshes has already been impacted by high-rise development at Stratford. However, tall towers directly next to the marshes will undermine the sense of openness, a protected characteristic of MOL.</p> <p>The site is 200% in Flood Zone 2. There are 3 recorded flood events within 100m of the site. Between this site and S403, there is a significant risk of hazard from flooding. The threat of extreme weather events is increasing exponentially and estimates provided are therefore conservative. With the River Lee flowing along the west of the site, and the Dagburn Brook being culverted beneath the site; the risk of river flooding must be seriously considered with and a precautionary approach taken. The proposed use for the site includes residential uses which are defined as "More Vulnerable" where Vulnerable development is currently permitted in Flood Zone 2, and the Exception Test is not required. However, given the risk of flooding from the River Lee to the wider area and to the site itself in the future as a result of the impacts of climate change, it is still important to consider how the potential flood exposure from the River Lee can be managed.</p> <p>In this area there are few open green spaces. Overdevelopment with tall housing blocks reduces openness and brings too many people to the area which it cannot support. Flood risk means should be kept open.</p>	<p>This land should be returned to marshland; this has the following advantages over what is currently proposed: it will tightly comply with the duty to protect the characteristics of Metropolitan Open Land; it will increase climate resilience and reduce flood risk, at a critical time, rather than contribute to additional flood risk in a more vulnerable location. The relationship between people and green spaces should be consistent across the Borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of cars, lighting and the impact of tall buildings. Hackney Marshes is adjacent to the proposed development and cannot sustainably absorb the impacts of the development, therefore the development should be completely reframed and replaced with an alternative which is superior in all aspects.</p>	No	<p>More detail may be required, with emerging evidence and new documents being considered.</p>	<p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p> <p>Through the evidence published in the Character Identification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.</p>
Georgia Turnbull				S402- New Spitalfields Market	No	No	No	<p>In this area there are few open green spaces. Overdevelopment with tall housing blocks reduces openness and brings too many people to the area which it cannot support. Flood risk means should be kept open.</p>		No		<p>Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.</p> <p>Through the evidence published in the Character Identification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p>
Felicity Jones				S402- New Spitalfields Market	No	No	Yes	<p>I think the plan is unsound as it will put huge strain on local biodiversity and wildlife. The number of people going to the marshes will increase and totally ruin the sense of openness of the marshes which are a haven for local people. Having access to such places (which we do not have in London) has a massive positive effect on mental wellbeing that will be lost. The tower blocks will create noise and add extra congestion of people, vehicles, pollution, noise and light to a sensitive area. I am also to believe the area is a flood zone. Surely building on this will lessen this vital natural service which will become increasingly needed as we face more extreme weather in the UK like flash floods? I am a local resident and have seen my area, not far from my Hackney Wick flood twice in the last year.</p>	<p>I would like to see the site returned to marshland for the community and local wildlife to enjoy. Having such places increases mental wellbeing and therefore takes pressure from the NHS. Having access to such places has proven to lower crime and help people recover from illness more quickly. We have certainly felt these positive effects for the last 20 years and especially during lockdown. The site as marshland has the potential to absorb rising levels of water (its estimated that 1 tree absorbs 11,000 gallons of water a year) and protect other areas of the Borough from flooding. It also provides a place for wildlife which is unique and should be valued. Finally, I suggest the site is left as it is, as a light industrial site where the risk of large loss of human life and property in the event of flooding is reduced.</p>	No		<p>Through the evidence published in the Character Identification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. If yes, please explain why?	Council's response
Alan Birtles				S402- New Spitalfields Market	Yes	No	Yes	think the plan is unsound as it includes very high tower blocks next to green open spaces which will reduce the openness of the green spaces. The plan suggests that a significant amount of open space will be lost. Obviously affordable housing is important but open green spaces are critical for people living in the area for their physical, mental health and well being. Are the proposed tower blocks to be for 2000 affordable housing. It is not desirable to have residents living in such high buildings. Reducing openness to open spaces also seems to be squeezing the space even more. This will inevitably have a detrimental effect on the biodiversity of the marshes. This something that is critical to protect as well. Increasing open green areas are a priority for the council but should all be managed with a common approach. The marshes should be protected by legislation in the same way as Epping Forest is being protected. This plan includes 50 storey tower blocks that will be detrimental to maintaining the openness of the marshes for local residents. The height of the tower blocks will in all likelihood be detrimental to the residents living in them. The south of the borough is more economically deprived and reducing green open spaces is likely to have a direct impact on residents' health which in turn will impact on already stretched NHS resources.	In my view I think the modification re this plan would be to return the site to marshland as the benefits to local residents having an open green space to enjoy will help people maintain healthy, well balanced lives in turn protecting NHS and other council services from additional pressures. It will also protect and maintain the biodiversity of the marshes which is hugely important in the context of protecting the environment. The area is a flood plain and there is no accurate quantifying the damage the proposed plan might have on the area in the coming years. Failing that I would argue that the area be used for new and innovative employment ideas. The residents in the area would benefit from increased job opportunities. Local transport routes are already in place which would support the option.	No	I am responding as I lived locally in Greenwich from 2019-2021. I also used to teach in Tower Hamlets. I have known the Hackney Marshes for many years and feel strongly about protecting them.	Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINCS), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development.
-				S402- New Spitalfields Market	No	No	No	You are cramming too many people into the borough just to get council tax and making it impossible for the long term residents to live a normal life. The borough is dirty, over polluted and governed by a council worthy of either a 1 or the dirtiest the attitudes and comments USDR has all that it shows to residents. LISTEN	We need sports facilities and green spaces AREA BETTER COUNCIL.	No	-	Through the evidence published in the Character Intensification Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development of higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on preserving existing parks and open spaces and enhancing access for leisure, sport and recreation. There is a commitment in the policy to try to ensure that there is adequate provision of recreational spaces, indoor and outdoor sports facilities and parks for all sections of the community, and to preserve the existing level of provision of playing pitches. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Tasha Stobie				S402- New Spitalfields Market	Yes	No	Yes	consider the plans for S402- New Spitalfields Market to be unsound as the development of high rise buildings overlooking the East Marshes and the River Lea would completely destroy the sense of open green space and make the marsh feel penned in and destroy the beautiful, expansive open sky that I enjoy on my regular walks around the perimeter of East Marshes and blue rides on the river path in the main marshes. It will throw the area into shade. I live in E20 where the ever increasing number of multi storey and high rise buildings makes the area feel closed in. I REALLY value being able to walk over to East Marshes and enjoy the open space. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 2000 critical studies in the last 5 years alone. The open green space of the Marshes has been a haven for so many of us local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.	The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community, and the resultant pressure this takes off primary care services is evident. This is, particularly true in the south of the borough that is more deprived, with a close link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment ideas - this is already a low rise employment site (locally significant industrial site) with good road (A12) connectors with the potential to create good railway links to the site, with no residential neighbours. This would be a suitable modification.	No	-	Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). The Local Plan requires that any new development must respect the amenity of existing residents and avoid harmful impacts from overlooking, enclosure, loss of privacy and loss of daylight/sunlight.
Alexandra Cusack				S402- New Spitalfields Market	Yes	No	Yes	Clause 3.9.50 of The London Plan 2021 states "The list of impacts of tall buildings in Policy D9 Tall buildings is not exhaustive and other impacts may need to be taken into consideration. For example, the impact of new tall buildings in proximity to waterbodies supporting notable bird species upon the birds' flight lines may need to be considered. At East River Basin, Water Works, the Walthamrow and Hackney Marshes and the River Lea are known for supporting notable bird species which may be affected by the new tall buildings. These are some of the notable bird species present in the local conservation areas which are also included in the BTO 'Birds of Conservation Concerns (Classification) Common Sandpiper, Green Sandpiper, Wood Sandpiper, Pochard, Gadwall, Shoveler, Willow Warbler, Linnet, Song Thrush, Reed Bunting (source: https://londonbirders.london.com/wiki/Waterworks_NR and https://wtc.wot.org.uk/?member=lee-valley-regional-park). I therefore find the S402- New Spitalfields Market plan unsound.	Alternative sites should be sought for building residential towers, away from areas and water bodies known for supporting notable bird species.	No	-	Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. Algal Woodman				S402- New Spitalfields Market	Yes	No	Yes	<p>welcome Waltham Forest Council's commitment to protecting Metropolitan Open Land (MOL) in the borough. Open green spaces are essential for physical and mental health and wellbeing, and it is very heartening to see that there are no proposals for developments on MOL. It must be said, however, that numerous tall developments in Leyton and Lea Bridge, including the development, will affect the openness of MOL, a characteristic of MOL that must be protected.</p> <p>Furthermore, the habitats of the marshes "Waltham Forest Marsh (as SSSI), Upper Marsh and Hackney Marshes" must be protected from the damage caused by an increase in the number of people, an increase in the number of pets and an increase in lighting and so on. If Epping Forest SAC is deemed worth of protection from development in this site allocations document, so should our equally important green spaces flanking the west of the borough. To do otherwise is inconceivable and, thus, unsound.</p> <p>While Waltham Forest Council has declared a climate emergency, its actions are not aligned with the serious consequences of climate change and biodiversity collapse and this site demonstrates this well. For example, during the numerous consultations about this site, local people argued that the area to the north of the site, which is presently inaccessible and therefore a home to nature, should be retained and enhanced as a haven for nature. The argument seemed to gain traction amongst Council representatives, but this current iteration of the site plan pushes development and connectivity into a currently wild area. It is unsound to plan for the environment at a policy level, but encourage development that destroys nature in practice.</p>	<p>This site is flood plan and, if New Spitalfields Market moves, it should ideally return to marshland. Not only is it unsound to build homes on a flood plain, the area, including the new residents in the new tower blocks being built, would benefit from more green space, the first floodwin, in 2020, demonstrated the huge pressure on existing open spaces nearby and nature suffered as a result. At the very least, however, the site should continue as a site for employment, with flood mitigation and habitat protection built into the new design.</p>	Yes	The local plan is focused on people and development and it is essential that the needs of the environment and wildlife are fully represented.	<p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.</p> <p>Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.</p>
Clare Taylor				S402- New Spitalfields Market	Yes	No	Yes	<p>The old River Lea is a rare urban site of importance for nature conservation, the proposed bridge would allow access from a major development, disturbing nesting longbills and other birds and risk general disruption to the habitat.</p> <p>The height of the development is inappropriate for the situation, currently that view from the marshes is of wooded area with nothing rising above it. The site is on a floodplain and the risk of flooding from severe weather events is set to increase.</p>	<p>Retain the site as low rise light industrial building, with no access to the river. This would retain the current level of protection to the ecology of the river bank, retain the current skyline and view across from Hackney Marshes and be able to provide much needed local employment. Avoiding substantial development on a floodplain is sound sense.</p>	Yes	The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.	<p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Amey Biffles				SAC2- New Spitalfields Market	Yes	No	Yes	object to the plans at SAC2 - New Spitalfields Market. The large number of new housing units and tall towers proposed will completely destroy the sense of open green space that the Marshes have. I run a weekly community group for mental health on the marshes and the sense of open space on them is so supportive to good mental health for so many people. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 1000 clinical studies in the last 5 years alone. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I fundamentally object to these proposals.	would suggest these modifications: 1) that the site be returned to marshland in light of the flood risk this area is under, especially with the predicted changes that will occur in the coming years with climate change. Failing this, I suggest 2) Leave the site as it is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity.		Absolutely, so the voices of the local community can be heard.	The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINC), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
Adam Cochrane				SAC2- New Spitalfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green space, is essential for physical and mental health and wellbeing, in the north of the borough. Developments must be designed to "minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, to the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of cars, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create goods railway links to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	Yes	-	The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EFSA) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINC), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Peter Carroll				SAC2- New Spitalfields Market	No	No	No	Needs to enhance greenspace in marshes	Needs to enhance greenspace in marshes	No	-	The Council is committed to ensuring the protection and enhancement of its green spaces both inside the Epping Forest and the Lee Valley Regional Park and other green spaces that are within the borough boundary. The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINC), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development. In order to achieve this, the Council has developed a Sustainable Alternative Natural Green Spaces Strategy (SANSS) in order to provide residents and air quality pressures specifically in Epping Forest. Development coming forward in the borough will also have to make payments towards the Epping Forest Strategic Access Management and Monitoring Strategy (SAMMS), funds from which will be used to deliver projects which help to secure the long term future vitality of the Epping Forest Special Area of Conservation.
Monica Press				SAC2- New Spitalfields Market	Yes	No	Yes	The proposed site SAC2 - New Spitalfields Market is located on a known flood plain. If it is built on, this site will be there for many years to come. With more extreme weather, river and tidal rises that are predicted with climate change, there is a severe risk of flooding on this site. Should the London barrier ever fail, it is also at risk from tidal flooding. I therefore object to the proposed plans for site SAC2, as building over 2,750 homes, with a predicted population increase of 5000-6000 people, on a known floodplain is unsound.	I would suggest that the site be returned to marshland in light of the flood risk this area is under, especially with the predicted changes that will occur in the coming years with climate change. The site as marshland has the potential to absorb rising levels of water (It is estimated that 1 tree absorbs 1,000 gallons of water a year) and protect other areas of the borough from flooding, while also thriving as a site of biodiversity that marshland brings. Failing this, I suggest the site is left as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create goods railway links to the site, with no residential neighbours. This will also mean that the risk of large loss of human life and property in the event of flooding is reduced.	Yes	-	Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. Through the evidence published in the Character Interimification Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocation Document (Local Plan Part 2) means that through development by infrastructure is identified in the Infrastructure Delivery Plan (IDP) can be secured.
Luke Twomey				SAC2- New Spitalfields Market	Yes	No	Yes	The proposed site SAC2 - New Spitalfields Market is located on a known flood plain. Isidra Alampara				S422- New Spitalfields Market	No	No	No	<p>1. Because a balance is needed between green areas and urban commercial developments. The council is choosing indiscriminate development of south side determined to that and its inhabitants that will see the local green areas and flora substantially reduced.</p> <p>2. Covid demonstrated the only way sites can remain attractive during continued prohibitions/ lockdowns is by means of allowing neighbours to access public green areas. The Marshes were a source of happiness and well being for the local neighbours.</p> <p>3. The environmental impact assessment of this development is insufficient and incomplete. There is little information on the short/med long term impact, little to no explicit mitigation and compensation plans and how this is going to impact the risk of flood.</p> <p>4. Several reports have highlighted the risk of flood that development of smaller scale than this project can entail. Water table in the already built areas near the Hackney marshes have increased drastically. In my street only, there were several incidents and insurance companies involvements, asked them as a problem due to many factors including the significant rise of development around the Lea River. We have not seen an appropriate answer to this problem that would only exacerbate due to climate change. All these projects are not being considered under that light and how viable they will be long term and we believe the authorities are being narrow minded and driven but short term benefits/ profits regarding the concerns of the sustainability of this long term.</p>	<p>2. Reduce the scale of the project.</p> <p>3. Invest in proper reports that would assess the impact of such projects in wildlife occupants:</p> <p>1. Serious reports and urban planning that considers the risk of flood in the area. Water table has been rising already and floods were spotted already without adequate measures been taken to reduce this, projects like this one are not viable long term or become too burdensome for the whole community. Again this was not done with the level of care and will be a disaster as once these developments go ahead to move or protect all the people will be responsible.</p> <p>4. Proper mitigation actions that would make up for the environmental impact of this project. As we see in this taking green spaces into more concrete but there is once mitigation, remediation, replacement etc of the affected green areas. It's a shame that birds and trees do not pay here because this seems a pretty rushed way for the council to raise collection but does not seem to have been properly considered long term.</p>	Yes	<p>Because as explained there seem to be a lack of preparation and in the case of transparency everyone should feel comfortable to raise their concerns and if the plan is sound I do not see why the council cannot defend its case. Transparency and knowledge are always better way to ensure things are done following protocols and in the public interest.</p>	<p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lea Valley Regional Park (Special Protection Area (SPA) and Ramsar).</p> <p>The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.</p> <p>The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. 				S422- New Spitalfields Market	Yes	No	Yes	<p>I object to the plans at S422 - New Spitalfields Market. The tall towers proposed (and the high population increase this will bring to the area) will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 2000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of our local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.</p>	The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes of primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create good railway links to the site, with no residential neighbours. This would be a suitable modification.	No	-	<p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver a higher density in the preparation of the Site Allocation document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.</p> <p>The Local Plan requires a character-led approach to intensification, including tall buildings and building heights, in accordance with London Plan Policy D1. The Local Plan recognises that, based on an understanding of character and context, some sites or areas in the borough are more appropriate for greater levels of intensification and/or height than others. This character-led approach is supported by evidence from the Characterisation and Intensification Study (2019).</p>
David				S422- New Spitalfields Market	No Response	No	No	<p>Green open spaces are very important. Particularly in the city. The Marshes is a special place, and the proposed building of the tower blocks will have a very negative impact to the sense of openness and wellness of the marshes. It is a very big development. The marshes must be protected.</p>	Keep it as a light industrial site. For employment. Green spaces need protection from developments which will cause damage by an increased number of people		-	<p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Judd Kempson				S422- New Spitalfields Market	No Response	No	No	<p>It does not adequately safeguard the biodiversity of Hackney Marshes nor is it sensitive as claimed. It is scandalous that in the age of climate emergency so much more carbon is planned to be emitted instead of focusing on rewilding and sustainable reprofiting of the existing building stock.</p> <p>Epping Forest and the Marshes should be protected from development equally on all sides.</p>	The plans presented with their density, use and lack of safeguards to define, deliver, and validate net zero performance are contrary to the council's climate emergency declaration in 2021.		-	<p>The local plan policy Biodiversity and Geodiversity will seek to protect and enhance biodiversity and geodiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green 'buffers' and 'corridors', 'wild' public amenity, green roofs and tree planting which will produce biodiversity net gain on sites.</p> <p>In April 2019, The Council declared a Climate Emergency. In the chapter in Local Plan Part 1 entitled Addressing the Climate Emergency, The Council sets out a strategic objective to build the borough's climate change resilience by targeting net-zero carbon emissions by 2030. This will be achieved by delivering more energy efficient development that is constructed to a more sustainable design and where possible connect, whether it's new build or the re-profiting of existing property, reducing the dependency on cars by encouraging modal shift to more active forms of transport such as walking and cycling, consuming less and recycling more which is inline with the GVA's Circular Economy Statement and the promotion of nature, health and wellbeing to increase resilience against climate change conditions such as heatwaves and flooding.</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lea Valley Regional Park (Special Protection Area (SPA) and Ramsar).</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EFSAC).</p>

Consultee	Consultee Organisation Details	Agent	Agent Organisation Details	Site Number	Legally compliant	Sound	Duty to Cooperate	Comments detailing why the plan is not legally compliant, unsound or fails to comply with the Duty to Cooperate	Modification(s) you consider necessary to make the Local Plan legally compliant and sound, in respect of any legal compliance or soundness matters identified	Do you consider it necessary to participate in examination hearing session(s)?	If yes, please explain why?	Council's response
				S402- New Spitalfields Market	No Response	No	Yes	Ground - particularly object to the height and density of this plan, especially as it is close in proximity to Hackney Marshes. There is already a huge bank of extremely tall buildings which emit a huge amount of light over the marshes area and what is planned would greatly increase this. This green space is not just pretty to be looked at but provides valuable filtering that we cannot afford to lose in a climate change environment. The land is a flood plain and no doubt would have been built on in the 19th century if it had been deemed suitable. When we have the technology to build now it doesn't mean it would not have an effect on the safety of people living there or on the environment as a whole. This has been demonstrated by the flooding of Stratford (including the station) in 2021.	I would preferably like to see the land returned to marshland but if this is not possible the current Market site should be retained as a site for small sustainable businesses. I would also question adding a bridge over the River Lea would not be the best thing, as increased access would lead to harm to the river ecology and the land through over use and litter. This was demonstrated by "Hackney Beach" during the Covid lockdowns and not fully recovered. The financial burden to the Council and its reputation as a borough that has declared itself to mitigate Climate Change would be compromised. There is also the issue of these plans impacting on the neighbouring borough of Hackney as they are close to the border.			Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.
				S402- New Spitalfields Market	Yes	No	Yes	Endangerment to wildlife, impact on CO2 emissions and flood resilience in the area.	Change the location of the proposal plan to avoid it affecting the area.			The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. In April 2019, The Council declared a Climate Emergency. In the chapter in Local Plan Part 1 entitled Addressing the Climate Emergency, The Council sets out a strategic objective to build the borough's climate change resilience by targeting net-zero carbon emissions by 2030. This will be achieved by delivering more energy efficient development that is constructed to a more sustainable design and where possible connect, whether it is new build or the retrofitting of existing property, reducing the dependency on cars by encouraging modal shift to more active forms of transport such as walking and cycling, consuming less and recycling more which is in line with the UK's Circular Economy Statement and the promotion of nature, health and wellbeing to increase resilience against climate change conditions such as heatwaves and flooding. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.
Cal Bateman				S402- New Spitalfields Market	Yes	No	Yes	I find it unsound to build large properties next to large, wild, open spaces. The beauty of the marshes is their openness, providing a much-needed respite site from the rest of the city. These developments will also increase footfall into the marshes and thereby increase damaging the biodiversity of the area.	I envisage nature restoration and restore to marshland, to benefit the environment and reduce flood risk 2) have site as light industrial site			Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.
Ben Hubbard				S402- New Spitalfields Market	No Response	No	No Response	The proposed changes dramatically alter the character of an irreplaceable green area with diverse land use and lots of wildlife. In its current state the market is hidden behind established trees and shrubbery.	To propose a much lower height of lower so as to not disturb the skyline.	No		Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Emma Kay				S402- New Spitalfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unacceptably inconsistent. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes. A sense of openness is what defines the marshes and why people flock to them. This sense of openness is very rare in London. The proposal will remove this sense of openness, the high rise housing proposed is not appropriate to the surroundings.	I am user of both Epping Forest and the marshes. The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people in the number of pets, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites and there is opportunity to develop housing in the borough without these high rise developments. This is already a low rise employment site (Local Plan Significant Industrial Site) with good road (A12) connections with the potential to create goods railway links to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EFASAC) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.

Adrianna Pietrusienczyk				SAC2- New Spillfields Market	No	No	No	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of pets, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A22) connectors with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.</p>	No	<p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC)</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p>
				S402- New Spillfields Market	No	Response	No	<p>Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, to the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.</p>	<p>The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be reframed. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A22) connectors with the potential to create goods railway link to the site, with no residential neighbours. Alex Miller				S402- New Spillfields Market	Yes	No	Yes	<p>Waltham Forest Council correctly recognises that having access to open green spaces is essential for the physical and mental wellbeing of people. We can see the acknowledgement of this, where in the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, this is not the same for the south of the borough where access to the marshes is being used to support intensive development. It is just as imperative to protect the marshes as it is to protect Epping Forest. Having two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.</p>	<p>The relationship between people and green spaces should be consistent across the borough. All green spaces should be protected from developments which will cause damage. The damage from this development will undoubtedly be caused by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, then the development should be reframed. The marshes certainly can't sustainably absorb the impacts of this proposed development. Therefore the development MUST be reframed. Additionally, these plans are harmful as they will undoubtedly lead to a line of towers along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A22) connectors with the potential to create goods railway link to the site, with no residential neighbours. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A22) connectors with the potential to create good railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Dan Farrelly				S402- New Spillfields Market	Yes	No	Yes	Waltham Forest Council is correct in their understanding that access to open green spaces is an essential factor in the mental and physical wellbeing of local residents. This is demonstrated well in their attempts to preserve green space in the north of the borough, minimising access to Epping Forest in an attempt to mitigate urban effects and ultimately aim to ensure "no adverse effect on the Epping Forest SAC. Unfortunately this is not mirrored in the treatment of green space in the south of the borough. This proposal would lead to intense development in the area and ultimately at high expense of the green space. The disparity in approach to Epping Forest and the marshes is completely unsound and problematic. Protecting Epping Forest is essential, but so is protecting the marshes. To have this glaring difference in the approach to green spaces within the borough is unsound and extremely troubling to a local who has kept within walking distance from the marshes my whole life. Epping Forest SAC is protected by legislation and I see no reason why it isn't equally important that the marshes are protected by similar means rather than lost to capitalist development.	I don't know how this development could be considered sound. An advantage that if the relationship between people and green space should be held consistently and with equal regard throughout the borough. Green spaces must be protected from the developments that will ultimately degrade them, as the increased number of people, pets, buildings, light, noise and general pollution caused by the development would surely result in. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which would degrade Marshes certainly can't, then the development should be refused. I strongly suggest that this site remains as it currently is. This would be the borough's approach to green space into alignment. The glaring disparity in approach to Epping Forest SAC and the Marshes is inherently unsound. On a human level and as a local resident, the continuation of this development is heart-breaking to me and many others who have frequented this site over a lifetime. I simply cannot stress how much this site means to so many people and to think that it could be so adversely affected in the pursuit of more high rise, unaffordable housing, which is ultimately high profiting and offers very little for locals, is devastating. I am pleading for this to not go ahead.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Calie Webb				S402- New Spillfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of pets, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A22) connectors with the potential to create good railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create goods railway links to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Ian Pearson				SAC2- New Spillfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, to the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes. In my own experience with this place, I used to come here during the first lockdown. It was a difficult time mentally, but being able to come to these wide open spaces reminded me that I didn't need to feel crushed by the weight of the city surrounding me. We need to be able to work with what already exists and find the value in such spaces, and paving the way for something which impact is ambiguous and may not be a fair trade-off. In the end, what will be left?	would suggest that the site be returned to marshland in light of the flood risk this area is under, especially with the predicted changes that will occur in the coming years with climate change. The site is marshland has the potential to absorb rising levels of water. It is estimated that 1 tree absorbs 1,000 gallons of water a year and protect other areas of the borough from flooding, while also thriving as a site of biodiversity that marshland brings. Failing this, I suggest the site be kept as it is, as a light industrial site where the risk of large loss of human life and property in the event of flooding is reduced.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes. This space contributes towards positive mental health for people in the area particularly because it has an openness away from the built environment which would be destroyed by the presence of new tower blocks.	The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits of open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, as a light industrial site that has minimal impact on the openness of the surrounding green space and landscape. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create goods railway link to the site, with no residential neighbours. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Roy Crawford				SAC2- New Spillfields Market	No Response	No	No Response	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of pets, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly cannot, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. Elizabeth Pauline				S402- New Spillfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.

				S402- New Spillfields Market	No			Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The modifications I suggest are that the site be returned to marshland, in light of the clear benefits to physical and mental health and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes on primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and poorer health outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create goods railway link to the site, with no residential neighbours. This would be a suitable modification. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No	The HBA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC) The HBA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Man Hon Luk				S402- New Spillfields Market	Yes	No	Yes	Waltham Forest Council appropriately recognises that admission to green spaces, especially open green spaces, is fundamental for physical and emotional well being and prosperity. In the north of the district, interventions should be intended to limit admission to Epping Forest and "moderate for metropolitan impacts to guarantee no antagonistic impact on the Epping Forest SAC. In that as it may, in the south of the district, admittance to the swamps is being utilised to help serious turn of events. Securing Epping Forest is fundamental, however it is likewise fundamental to protect the marshes. To have two unique ways to deal with the assurance of green open spaces in the district is unsound. While securing Epping Forest SAC is driven by legislation, there is not a really obvious explanation for why a similar methodology can't be taken towards the marshes.	The changes I propose are that the site be gotten back to marshland, considering the unmitigable advantages open space has on our psychological, physical and social wellbeing. The advantages that open marshland has for the neighborhood and more extensive local area and the resultant tension this takes off essential consideration administrators is obvious. This is especially evident in the south of the ward that is more denied, with an unmistakable connection between more significant levels of lower financial status and decreased medical services results. Beyond the arrival of the site by normal means (i.e., I recommend leaving the site for what it's worth, as a light modern site that significantly affects the transparency of the encompassing green space and biodiversity. Waltham Forest necessities work destinations- this is a case of a low cost business site (Locally Significant Industrial Site) with great street (A2) associations with the possibility to make products all roads connect to the site, with no private neighbors. This would be an appropriate alteration.	No	The HBA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC) The HBA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Isabella Butcher				S402- New Spillfields Market	No			Waltham Forest Council is correct in their understanding that access to green open spaces is an essential factor in the mental and physical well-being of local residents. This is demonstrated well in their attempts to preserve green space in the north of the borough, minimising access to Epping Forest in an attempt to mitigate urban effects and ultimately aim to ensure "no adverse effect on the Epping Forest SAC. Unfortunately this is not mirrored in the treatment of green spaces in the south of the borough. This proposal would lead to intense development in the area and ultimately a high exposure of the green space. The disparity in approach to Epping Forest and the marshes is completely unsound and problematic. Protecting Epping Forest is essential, but so is protecting the marshes. To have this glaring difference in the approach to green spaces within the borough is unsound and extremely undesirable to me as a local who has lived within walking distance from the marshes my whole life. Epping Forest SAC is protected by legislation and I see no reason why it isn't equally important that the marshes are protected by similar means rather than lost to capitalist development.	I am adamant that if the relationship between people and green space should be considered consistently in the mental and physical well-being of the borough. Green spaces must be protected from developments that will ultimately degrade them, as the increased number of people, parts, buildings, light, noise and general pollution caused by the development would surely result in. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which I would argue Marshes certainly can't, then the development should be refused. I strongly suggest that this site remains as it currently is. This would bring the boroughs approach to green space into alignment. The glaring disparity in approach to Epping Forest SAC and the Marshes is inherently unsound. On a human and local level, the continuation of the development would be undesirable to me and others who have frequented this site over a lifetime. I simply cannot stress how much this site means to so many people and to think it could be so adversely affected in the pursuit of more high rise, unaffordable housing, which is ultimately legal proofreading and offers very little for locals, is devastating. I am pleading for this to not go ahead.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Furthermore, these sites are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Will Millard				SAC2- New Spillfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, to the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refused. Furthermore, these sites are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create goods railway link to the site, with no residential neighbours. 				S402- New Spillfields Market	No	Response	No	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. This is well documented and is recognised by the Council itself. In the north of the borough, Epping Forest is protected from the harmful impacts of development, the Marshes are no less important to those who live near them. The openness of the green space is of paramount importance in order to get these effects, as is the fact that the Marshes is a natural habitat and an area of huge importance for biodiversity. Engineered green spaces within a dense development are no substitute, and will in no way compensate for the loss of the sense of openness and escape from the urban environment which makes the Marshes such a valuable asset to the borough and neighbouring Fradley. It also seems foolhardy to build such a significant development on a flood plain when we have already experienced flooding across the borough and more extremes of weather are expected.	Ideally the area should be returned to marshland which could actually contribute to mitigating the effects of climate change. Failing that, the site should be retained as a low rise site providing employment. If housing development is considered essential, the scale should be much reduced. The buildings kept low to minimise the visual impact of the development on the remaining green space, with a commensurate reduction in the overall scale to reduce the impact of increased population.			<p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC)</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. This policy will apply to all new development sites in the Borough.
Jane Reynolds				S402- New Spitalfields Market	Yes	No	Yes	I believe that we should protect open green spaces in the same way that open green spaces are protected in Epping Forest.		No		The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINC), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA), will not normally be granted planning permission without appropriate mitigation measures in place prior to development. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
Iain Pettifer				S402- New Spitalfields Market	Yes	No	Yes	As a resident local to the marshes for the last 9 years, I'm glad that Waltham Forest Council acknowledge the importance of green spaces, particularly open green spaces, and I have personally found it a vital location to help with my own mental health, as well as exercising. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. It is just as essential to protect the marshes as it is Epping Forest. Two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes. The amount of homes new homes planned (2750) will put high population pressure on the marshes, while the scale of the development (50-80 storey high) will drastically effect the view from the marshes, it will no longer be an "open space" The scale of the construction will also significantly effect the wildlife and landscape.	A sensible solution would be to return this site to marshland to mitigate flood risk, especially when considering future climate change, or keep the site as a light industrial site and provide more jobs for the area. Green spaces should be protected at all costs from developments which will cause damage by an increase in the number of people, in the number of pets, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, then the development should be refused. The healthy marshes are a haven for so many people, especially in the last few years, and this should be protected at all costs.	Yes	As a local resident I want to ensure we are not left out of the planning.	The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
Ara Smith				S402- New Spitalfields Market	No	No	No	This Greenland is necessary for locals and citizens of London - without it there will be more pollution and noise pollution and people will not have anywhere nice to go for a walk. Green spaces are necessary.	Do not build anything over the green space.	Yes		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The new Local Plan sets stringent environmental standards, including with respect to pollution. It requires that development should meet or improve upon air quality neutral standards over the lifetime of a development and does not contribute to a decrease in air quality during the construction or operating stages of development.
Nikki D Labin				S402- New Spitalfields Market	No Response	No	No Response	Ground - high rise blocks next to open green space reduces the amenity value and degrades the nature and essence of the open-space landscape	Reduce heights of blocks	Yes		Through the evidence published in the Character Identification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
										No

George Arabella				S402- New Spitalfields Market	No	No	No	These are highly used spaces that are important for local residents, residents from afar (I regularly come here for my physical and mental health and wellbeing). These green spaces are ESSENTIAL for so many, have enough housing blocks in the city. I think it is inhumane to take away our green spaces.	The relationship between people and natural green spaces and their wellbeing is unarguable. Please stop chasing money and put our health and natural ecosystems first.		This should not go ahead at all	The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
Daisy Hutchinson				S402- New Spitalfields Market	Yes	No	Yes	Argument for importance of green space on mental health: I object to the plans at S402- New Spitalfields Market. The tall towers proposed and the high population increase this will bring to the area) and completely destroy the sense of open green space and biodiversity that the Marshes have, that is unique in London. Waltham Forest has had a duty to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 1000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of us local residents. Many people attribute their mental health and wellbeing to being able to access the open space of the Marshes, not just during good but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these plans are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely un sound and I object to these proposals. Argument for danger of construction on a Floodplain: The proposed site S402- New Spitalfields Market is located on a known flood plain. If it is built on, this site will be there for many years to come. With more extreme weather, river and tidal rises that are predicted with climate change, there is a severe risk of flooding on this site. Should the London barrier ever fail, it's also at risk from tidal flooding. I therefore object to the proposed plans for site S402, as building over 2,700 homes, with a predicted population increase of 5000-6000 people, on a known floodplain is un sound.	Argument for importance of green space on mental health: The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off ordinary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites, this is already a low rise employment site (locally significant industrial site) with good road (A2) connections with the potential to create good quality railway links to the site, with no residential neighbours. This would be a suitable modification. Argument for danger of construction on a Floodplain: I would suggest that the site be returned to marshland in light of the flood risk this area is under, especially with the predicted changes that will occur in the coming years with climate change. The site as marshland has the potential to absorb rising levels of water (its estimated that it can absorb 1,1000 gallons of water a year) and protect other areas of the borough from flooding, while also serving as a site of biodiversity that marshland brings. Failing this, I suggest the site is left as is, as a light industrial site where the risk of loss of human life and property in the event of flooding is reduced. Argument for increased population and congestion to the area:	Yes	-	The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
Jade Crossland				S402- New Spitalfields Market	Yes	No	Yes	The proposed development at S402- New Spitalfields Market will put huge population pressure on the surrounding marshland, with 2,750 homes bringing an estimated 5000-6000 more people to the area, alongside an increase in domestic cars. This population increase will in turn increase congestion, air, noise and light pollution on the vulnerable marshland area it sits on. The proposed site is a vulnerable river environment, with the Hackney side of the Old River Lea being a Site of Importance for Nature Conservation (SINC), and there is no adequate mention of this conservation status in the proposal as it is around the Epping Forest area. This use of this site to house another 5000-6000 people is putting huge population pressure on a vulnerable SINC that will not be able to withstand the weight of increased pollution and population density, therefore I wish to object to this proposal as it is un sound.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of cars, lighting and the impact of tall buildings. If green spaces near to a proposed development cannot sustainably absorb the impacts of the development, as in the case of Marshes car, then the development should be reframed. I suggest that this site be returned to marshland land to protect its conservation status as a SINC. Failing that the site should be left as is, as a low rise locally significant industrial site that Waltham Forest needs anyway, that has minimal impact on the vulnerable river environment it sits on.	No	-	Through the evidence published in the Character Intensification Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development of higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The new Local Plan sets stringent environmental standards, including with respect to pollution. It requires that development should meet or improve upon air quality neutral standards over the lifetime of a development and does not contribute to a decrease in air quality during the construction or operating stages of development.
Catherine				S402- New Spitalfields Market	No	No	No	loss of green space, lack of amenity, threat to floodplain, destructive to wildlife	scrap this scheme	No	-	The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exemption test that there are wider sustainability benefits to the community that outweigh flood risk and that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. The Local Plan states that the loss of existing social or community infrastructure will usually not be permitted unless there are adequate alternative facilities. It is no longer required or would not lead to a shortfall in provision.
				S402- New Spitalfields Market	Yes	No	Yes	I think it is un sound as it will drastically change a haven within the city, making it feel more industrial and reducing the sense of openness. In the pandemic the marshes were a beneficial space for people to relax while feeling space. The plans also risk affecting wildlife and mental health of surrounding communities.	Either don't develop the site like this or massively reduce the high of the developments	No	-	The Local Plan requires a character-led approach to intensification, including tall buildings and building heights, in accordance with London Plan Policy D1. The Local Plan recognises that, based on an understanding of character and context, some sites or areas in the borough are more appropriate for greater levels of intensification and/or height than others. This character-led approach is supported by evidence from the Characterisation and Intensification Study (2019). The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant long environment for all sections of the population in Waltham Forest.

Amey Balfas				S402- New Spillfields Market	No	No	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of pets, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of development, then the development should be re-located. I suggest that this site is kept as it is, as a light industrial site. Waltham Forest needs employment sites with good road (A12) connections with the potential to create goods railway link to the site, with no residential neighbour. This is compatible with open space and would be a suitable modification.	Yes	Absolutely, so the voices of the local community can be heard.	<p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. This policy will apply to all new development sites in the Borough.</p>
Isa				S402- New Spillfields Market	Yes	No	Response Green spaces are essential to physical and mental wellbeing, as stated by the Waltham Forest Council, and must also be protected from damage from an increase in people, tall buildings, pets and lighting. Before the Marshes should be preserved just as Epping Forest is preserved as an open green space. Waltham Forest has said it wants to protect and enhance green spaces, and the towers proposed will destroy the unique biodiversity of the Marshes. To build over these open spaces that have been so precious to our physical, mental and social wellbeing during COVID 19 and earlier would be completely unsound.	Protection of green spaces must be consistent throughout the borough, meaning the Marshes should be granted the same level of protection as Epping Forest. The Marshes certainly cannot absorb the impacts of the proposed plan - which will lead to a line of tower blocks along the east side of the Marshes - and this plan must be reformed, and the Marshes kept as it is, a light industrial site with minimal impact of the satellite and open green space.	Yes	-	<p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. 				S402- New Spillfields Market	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green open spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refused. Furthermore, these plans are harmful as they will undoubtedly lead to a loss of forest all along the east side of the Marshes. I suggest the modification that this site be kept as it is, as a light industrial site. Waltham Forest needs employment sites - this is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create goods railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	Yes	-	The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINCs), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development.
Mark Lumley				S402- New Spillfields Market	No	No	No	Encroaches on the river Lea habitat and the scale is disproportionate to the sensitive site.	Retain more green-space around and along side of the river, and make wildlife habitat corridors, dramatically reduce the scale of the development and ensure all accommodation has good access to external spaces.	Yes	To review changes and comment	The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The local plan policy Biodiversity and Goodness will seek to protect and enhance biodiversity and goodness resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green 'buffers' and corridors, 'wild' public amenity, green roofs and tree planting which will produce biodiversity net gain on sites. The London Plan (2021) sets a 20 year minimum housing target for Waltham Forest of 32,640 new homes (1,264 per year) based on a London-wide assessment of capacity/available sites in 2017/18. The original draft London Plan figure was equivalent to approx. 1,800 homes per year, but targets were downgraded across London by the Planning Inspectors examining the London Plan as the formula used to calculate supply from small sites was not shown to be justified. The revised target falls short of the Council's identified housing need of 1,810 new homes per year, as well as the London Plan identified need for 65,000 homes per year across London.

Consultee	Consultee Organisation Details	Agent	Agent Organisation Details	Site Number	Legally Compliant	Sound	Duty to Cooperate Compliance	Comments detailing why the plan is not legally compliant, unsound or fails to comply with the Duty to Cooperate	Modification(s) you consider necessary to make the Local Plan legally compliant and sound, in respect of any legal compliance or soundness matters identified	Do you consider it necessary to participate in examination hearing session(s)?	If yes, please explain why?	Council's response
Andrew Pitt				S402- New Spitalfields Market	No Response	No	No Response	The Marshes have been a sanctuary to me over the last couple of tumultuous years. Being able to go to a nearby expanse of openness with unobstructed views has been life saving. Taking this away with high-rise is totally unsound. There will no doubt be a lasting impact on the surrounding environment. There has been so much development to the south of the plan, this seems like yet another money grab rather than truly motivated by building the community in a healthy way.	Significantly reducing the height of proposed development. Preferably convert these spaces into more parkland.			The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
Zoe Garbutt				S402- New Spitalfields Market	Yes	No	Yes	The buildings are too high which will have an impact on the marshes nearby - this will affect the cause of openness. The buildings will have an impact on the biodiversity of the marshes and surrounding area through light pollution and the height of the building overshadowing the marshes. The housing proposed also isn't for those most in need. Building works are highly detrimental to the environment	#NAME?	No		Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
Paul Bolding				S402- New Spitalfields Market	No Response	No	Yes	It's inconceivable to seek to minimise access to Epping Forest in one part of the borough, as the council rightly does, and yet put forward proposals like this that will lead to over-use of the marshes. The scale and massing of these blocks is such that they would dominate an important open space and greatly reduce their amenity by imposing a feeling of enclosure and being surrounded. An important part of the enjoyment of these open spaces is to get away from the pressures of daily life and no cost to the ordinary people of London. These blocks - and those that will follow this dangerous precedent - would hugely reduce that enjoyment for all Londoners.	Return the site to marshland or greatly reduce the height and massing of any development so that it's hardly visible from the marshes. That might allow the council to do its duty to protect its status as a Site of Importance for Nature Conservation.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. 				S402- New Spitalfields Market	No Response	No	No Response	This plan will irrevocably change the nature, biodiversity and social benefits of a precious local asset - ie green space. Affordable housing is desperately needed but, as has happened with so many similar developments, there is little if any benefit for low income families in need of housing and huge profits for foreign investors.				<p>The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.</p> <p>There are many definitions of affordable housing. Because of the severity of the housing crisis, an increasing number of households on a range of income are affected. This means a range of options are needed. Low-cost rent including Social Rent and London Affordable Rent will form the basis of genuinely affordable homes, however intermediate housing can and will still play an important role. Shared Ownership for example, supports home ownership aspirations for people who might otherwise struggle to get on the housing ladder.</p> <p>The allocations require affordable housing in line with the policy approach set out in Local Plan 1.</p> <p>The Local Plan sets out requirements in Policy 14 and 15 for the proportions of homes in a scheme which are expected to be low-cost rented, and which are to be intermediate and the expected mix of sizes. Variations are considered when they can be justified based on a number of factors including site location, area characteristics, design constraints, scheme viability and end-user affordability.</p>
				S402- New Spitalfields Market	Yes	No	Yes	The boundaries of the marsh will be eroded by the tall towers, which will completely change the appearance and feel of the wide open spaces. The development will mean more people, more footfall, more cars in the area, more traffic on the edges, more wheats, bicycles/trams/scooters across the marshes. It will have knock on effects on the biodiversity of the area, and will cause environmental damage to wildlife and plants.	Hickney Marshes should be protected in the same way that Epping Forest is and any plans for its development should follow consistent approaches with restrictions on building and developing around Epping Forest. There are other needs for Waltham Forest which could be met through further light industrial development (with low buildings) such as the sites that already exist. This is in keeping with the areas current character.			<p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Marcia Vidal				S402- New Spitalfields Market	Yes	No	Yes	The plans to build here will totally destroy the openness of the natural area which has been so beneficial to thousands of peoples mental health, especially over the past two years. Waltham Forest claims to want to protect green spaces and has just measures in place to do so with Epping Forest is to approach development over the marshes with a completely contradicting attitude in incredibly unsound	The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Failing the return of the site to natural marshland, I suggest leaving the site as it is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity.			<p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasizes the provision of GP practice and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p>
Marina Polozov				S402- New Spitalfields Market	No Response	No	No	The council of Waltham Forest rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. Protecting the green space and it's biodiversity should be one of the top priorities of Waltham Forest council and it's residents. Spaces such as this have save the mental health of many citizens especially during the pandemic and the lockdowns and these proposed tower blocks and houses will completely destroy that	If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be refused. Furthermore, these towers are harmful as they will undoubtedly lead to a line of towers all along the west side of the Marshes	No		<p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Richard William Harris				S402- New Spitalfields Market	No	No	No	The adjoining area to the marshes is extremely sensitive to any further development. It is essential to retain the openness leading up to the proposed development as it contributes to the overall wonder and effectiveness of the marshes to users. Building up to and against the protected marshes will have significant detrimental impact on the habitat and quality of experience to users enjoyment of the area.	Retain the current footprint of the market and enhance, rather than develop, the area of separation.	No	-	The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINCs), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
Tara McCormack				S402- New Spitalfields Market	Yes	No	Yes	The Hackney marshes are so important to the locals and surrounding areas, don't do this		No	-	The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. -				S402- New Spitalfields Market	No	No	No	completely unreasonable and environmentally contains no effort to reduce emissions. This is untenable and completely at odds with the government mandate to reduce emissions to net zero. The use of concrete which emits CO2 and other harmful chemicals, ground contamination and artificial plastic use has not been considered. On these grounds this development is illegal and will ruin the marshes.	**** you for trying to develop and ruin one of the few green spaces that is free in Hackney, you are supposed to be looking after people and instead you are trying to line your ***** pockets, scumbags the lot of you.	-	-	In April 2023, the Council declared a Climate Emergency. Reducing private car travel will improve air quality by reducing air pollution. This will also be of benefit for the health of our residents. Most residential development proposed within the Plan is car-free and employment development is car-sept. Additionally, the policies in Local Plan Part L ensure that development coming forward in the borough meets and where possible improves air quality standards over its lifetime and does not contribute to a decrease in air quality during the construction or operation stage as a passive measure. The new Local Plan sets stringent environmental standards, including with respect to pollution. It requires that development should meet or improve upon air quality neutral standards over the lifetime of a development and does not contribute to a decrease in air quality during the construction or operating stages of development. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Ramsar site.
Ella				S402- New Spitalfields Market	No	No	No	do not think the plan takes into account the users of the marshes, and families who need affordable housing.	If built, the housing should be affordable and accessible. It should also not impose on the marshes or interfere with the natural habitat that it provides. The marshes are such an important space for people and community in so many ways, as well as the diverse wildlife that it is home to therefore it is hugely important that we do not do anything to threaten this.	No	-	The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. There are many definitions of affordable housing. Because of the severity of the housing crisis, an increasing number of households on a range of income are affected. This means a range of options are needed. Low-cost rent including Social Rent and London Affordable Rent will form the basis of genuinely affordable homes, however intermediate housing can and will still play an important role. Shared Ownership for example, supports home ownership aspirations for people who might otherwise struggle to get on the housing ladder. The allocations require affordable housing in line with the policy approach set out in Local Plan 1.
Iona				S402- New Spitalfields Market	No	No	No	No high rise flats on Lea marshes	No high rise flats on Lea marshes	No	No high rise flats on Lea marshes	Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. This response is noted.
										Yes		

Consultee	Consultee Organisation Details	Agent	Agent Organisation Details	Site Number	Legally Compliant	Sound	Duty to Cooperate Compliance	Comments detailing why the plan is not legally compliant, unsound or fails to comply with the Duty to Cooperate	Modification(s) you consider necessary to make the Local Plan legally compliant and sound, in respect of any legal compliance or soundness matters identified	Do you consider it necessary to participate in examination hearing session(s)? This response is noted.
Richard Cooper				S402- New Spitalfields Market	No Response	No		Local Plan is unsound as it detract from a natural area providing fresh air and greenery. I also think it unsound to build on or near marshes. It is a nature drainage area.				The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.
-				S402- New Spitalfields Market	Yes	No	Yes	The Local Plan is unsound as it limits the openness of the spaces. It would affect the fauna that lives within the Marshes and add unnecessary pressure to the transport in the area.	I would suggest to either leave the site as it currently is or to substantially reduce the height of the towers.	No		Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. 				S402- New Spitalfields Market	Yes	No	No	FIRST BOX: I object to the plans at S402 - New Spitalfields Market. The tall towers proposed (and the huge population increase this will bring to the area) will completely destroy the some of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 5000 clinical studies in the last 5 years alone. The open green space of the Marshes has been a saviour for so many of us local residents. Many people attribute their mental health and wellbeing to being able to access the open spaces of the Marshes, not just during covid but for the last 20 years and longer. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks and houses will completely destroy that. Furthermore, these sites are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes. Therefore to bring forward these tower blocks that are going to devastate the open space and biodiversity of the area is completely unsound and I object to these proposals.	SECOND BOX: The modifications I suggest are that the site be returned to marshland, in light of the clear benefits open space has on our mental, physical and social health. The benefits that open marshland has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between higher levels of lower socio-economic status and reduced healthcare outcomes. Giving the return of this site to 'natural marshland', I suggest leaving the site as it is, as a light industrial site that has minimal impact on the openness of the surrounding green space and biodiversity. Waltham Forest needs employment sites - this is already a low rise employment site (locally Significant Industrial Sites) with good road (A12) connections with the potential to create good quality links to the city, with no residential neighbours. This would be a suitable modification.			Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.
				S402- New Spitalfields Market	No Response	No Response	No Response	I object on the grounds that the proposed development will inevitably change the character of the landscape for the worse in terms of regenerating the diversity of wildlife and nature at a time when we need to hold onto every precious scrap of nature.				The local plan policy Biodiversity and Gooddiversity will seek to protect and enhance biodiversity and gooddiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green "buffers" and corridors, "wild" public amenity, green roofs and tree planting which will produce biodiversity net gain on sites. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
				S402- New Spitalfields Market	No Response	No	No	This is a large area of historic marshes and the construction of new flats will negatively affect the wildlife in the area				In Local Plan Part 1, Policy 72 - Designated Heritage Assets; There is a strong presumption in favour of retention and enhancement of Designated Heritage Assets such as Grade II listed buildings and their settings as their retention helps to ensure the boroughs history, identity and sense of place are protected for future generations to celebrate and enjoy. Planning permission will not be granted unless robust justification is provided in the planning process for any deviance from these clauses that would lead to either substantial harm or total loss of a designated heritage asset in the borough. The local plan policy Biodiversity and Gooddiversity will seek to protect and enhance biodiversity and gooddiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green "buffers" and corridors, "wild" public amenity, green roofs and tree planting which will produce biodiversity net gain on sites.
				S402- New Spitalfields Market	No	No	No	The local ecosystem is going to be in extreme danger with these new developments and a whole area of rich history will be wiped out		No		The local plan policy Biodiversity and Gooddiversity will seek to protect and enhance biodiversity and gooddiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green "buffers" and corridors, "wild" public amenity, green roofs and tree planting which will produce biodiversity net gain on sites. In Local Plan Part 1, Policy 72 - Designated Heritage Assets; There is a strong presumption in favour of retention and enhancement of Designated Heritage Assets such as Grade II listed buildings and their settings as their retention helps to ensure the boroughs history, identity and sense of place are protected for future generations to celebrate and enjoy. Planning permission will not be granted unless robust justification is provided in the planning process for any deviance from these clauses that would lead to either substantial harm or total loss of a designated heritage asset in the borough.
				S402- New Spitalfields Market	Yes	No	Yes	It is essential to protect the marshes. We should be protecting green spaces across the borough, the marshes are a vital space for local residents health and wellbeing. It's also a flood plain that has the potential to absorb rising levels of water, which we will need urgently to protect the area from the impact of climate change.	I suggest returning this space to marshland. For the benefit of those in the local community.		compliance with the reg 19 process	Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
										Yes

Deborah Bill				S402- New Spitalfields Market	Yes	No	Yes	The habitat of Hackney Marshes needs protection, as Epping Forest is, as it provides a vital habitat for wildlife and also flood drainage for nearby housing properties. Building there would be building on a flood plain, which is unsound.	Keep the area as a small industrial site, as it is, which has little impact on the Marshes. Or, to increase the ability of the Marshes to absorb flood water, restore it to marshland which would restore biodiversity and further protect existing surrounding properties.			Hearing sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93. Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
				S402- New Spitalfields Market	Yes	No	Yes		Should not be so close to canals and protected wetland area	No		The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas of Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the Borough. There is a statutory requirement to consult Natural England in cases where development may affect these sites. Any development proposals that pose an adverse direct or indirect effect on the biodiversity or nature conservation value on any land or area within the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINCs), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) will not normally be granted planning permission without appropriate mitigation measures in place prior to development.
S Ferguson				S402- New Spitalfields Market	Yes	No	Yes	Hackney Marshes is an essential area for people to access for mental health and wildlife which has been massively reduced in the last 40 years. These developments will help and encourage neither of the above especially wildlife. We need to be looking to increase biodiversity not decrease it.	The relationship between people and green spaces should be consistent across the borough. This development isn't showing consistency. The site should either be returned to marsh levels or left as it is.			The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.
				S402- New Spitalfields Market	No	No	No	I believe it is unsound because it has a wholly negative impact on the habitat and ecosystem of the area and has a wholly negative impact on the mental health of people who rely on the area for fresh air, exercise and open space	Do not build			The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Nicola Morrison				S402- New Spitalfields Market	Yes	No	Yes	There is an emphasis on protecting access to Epping Forest in the north of the borough but a reverse strategy in the south of the borough. The marshes are an valuable for residents and as important for wildlife and climate change as the forest and should be protected too. Having two opposing strategies in the same borough is unsound. The proposals for building area are on a flood plain making this an unsound idea.	This area should be kept as a light industrial site - it cannot support the development it has been earmarked for. This would have less negative impact on the marshes through tall buildings, pets, people and light pollution. Due to the risk of flooding the area should be kept as a light industrial with amendments made to mitigate flooding through permeable surfaces, planting and drainage) or returned to the marshes as highly absorbent green space.			The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.
Naama Ellis				S402- New Spitalfields Market	Yes	No	Yes	I think this proposal is unsound for the following reasons: The marshes should be protected as an open green space in the same way that Epping Forest is protected. Waltham Forest Council has acknowledged the importance of open green spaces as essential for mental and physical health. Designs near Epping Forest must be designed to "minimise access to Epping Forest but near the marshes access to the marshes is being used to support development. It is unsound to have two different and contradictory approaches to open green spaces in the same borough. Epping Forest SAC is framed by legislation, why isn't the same approach being taken to the marshes?	The approach to the relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments that will cause damage through increased numbers of people and pets, poor lighting and the impact of tall buildings. I suggest the site remains as a light industrial site providing accessible employment, something Waltham Forest needs, whilst presenting minimal risk to the marshes, or alternatively is returned to marshland, given the risk of flooding on the site owing to it being a floodplain which is at increased risk of flooding as we experience more and more extreme weather.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EFSAC) The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Asha				S402- New Spitalfields Market	Yes	No	Yes	I have been a WF resident my whole life, have lived next to and gone to school next to the Marshes, Lee Marshes is a special site for plants and wildlife, it's a haven for the local community who use it for education, recreation and for health. The proposed plans are unsound as they would significantly adversely affect the Marshes and its wildlife and landscape and in turn impacting the local communities who use it daily. This I believe would go against the wishes of Waltham Forest Council who recognise the importance of green spaces. In other areas of the borough plans next to Epping Forest are showing consideration for green spaces, I believe this should be the case for the Marshes too.	Due to the nature of the plans above, I believe the only modification in this case would be to leave the site as is, with light industrial use. This is the only way to ensure no disturbance is made to the natural environment.	No		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The local plan policy Biodiversity and Geodiversity will seek to protect and enhance biodiversity and geodiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green 'buffers' and corridors, 'wild' public amenity, green roofs and tree planting which will produce biodiversity net gain on site.
Jane Reynolds				S402- New Spitalfields Market	Yes	No	Yes	If the surroundings of Lee Valley and Hackney marshes are built around it changes the open space feel and also will affect the biodiversity.	Low rise flats. Smaller development. Council / Affordable rent percentage increased in that.	No		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The local plan policy Biodiversity and Geodiversity will seek to protect and enhance biodiversity and geodiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green 'buffers' and corridors, 'wild' public amenity, green roofs and tree planting which will produce biodiversity net gain on site.
Melanie Salisbury				S402- New Spitalfields Market	Yes	No	Yes	In the north of the borough, developments must be designed to "minimise access to Epping Forest" and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC". However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. To have two different approaches to the protection of open green spaces in the borough is unsound. While protecting Epping Forest SAC is given by legislation, there is no reason why the same approach cannot be taken towards the marshes. Houses who have lived along the Lee River for many years are being pushed out, and pushed out under the false pretence to give more space to the rivers and take care of the natural surroundings!!	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments and the impact of tall buildings. I live next to the river Lee where I spend time out the nature of the marshes nearly everyday. It became a liability for so many over the last two years where the mental health of so many needed support. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, which the Marshes certainly can't, then the development should be re-framed. Furthermore, these plans are harmful as they undoubtedly lead to a row of towers all along the east side of the Marshes. I suggest the modification that this site be kept as is, as a light industrial site. Waltham Forest needs employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A2) connections with the potential to create ponds. Pathway link to the site, with no residential neighbours. This is compatible with open green spaces, offering the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EFSAC) Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.

If yes, please explain why?	Council's response
Rosanne Snow				S422- New Spitalfields Market	No Response	No	No	Hugely detrimental to the wildlife and green spaces of Hackney Marshes, which are essential for the mental health of so many locals.	The towers that are proposed are far too tall and will have huge implications for the green spaces of Hackney Marshes.			The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.
Catherine Duncan				S422- New Spitalfields Market	No Response	No	Yes	The Local Plan needs to have consideration for the users of Hackney marshes, and Walthamstow marshes, who may be residents of any bordering (or other) borough - it is a key piece of open land for many London residents! The Local Plan is unsound as its mission is based only on a criteria of identifying sites to provide housing and fit an every changing housing target, which carries a disproportionate weight, compared to maintaining a good balance of open ground and preservation of natural habitats for wildlife. The considerations are based only on the benefits for new inhabitants, with no consideration for current inhabitants. Since the site is bounded on one side by an on crossable railway track and on the other by a river, it will inevitably use the river Lea and marshes as a backyard open space. Although the marshes are an open space, they are a wildlife preserve and SSSI, need protection from mass human recreational use. The consultation on this site needs to be considered in tandem with Hackney and Newham developments, and other developments in the Lea Valley corridor. The size and proximity of these buildings to the minimal open land that we have in the urban area will overwhelm and encroach on the open space.	The Local Plan needs to be ratified by Hackney, Newham, Haringey and local residents.	No	For transparency.	The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.
Harrri Lee				S422- New Spitalfields Market	No Response	No	No	Building a significant development with high rises on the border of the marshes is inappropriate - it will reduce the natural beauty of the marshes, threaten wildlife by adding population pressure. Its also on the River Lea Flood plain - unwise to build there.	Either return to marshland or leave site as is	Yes		Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.
Eleanor Bill				S422- New Spitalfields Market	Yes	No	Yes	Will further put at risk the biodiversity of Hackney Marshes and the marshland, which is an essential flood barrier. This will risk existing surrounding properties. The site is located on a known flood plain which also puts the proposed 5000-6000 residents at risk of flooding.	Return area to marshland to aid mitigating flood risk, or leave as is to not increase flood risk	Yes		The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.
Marc Spicer				S422- New Spitalfields Market	Yes	No	Yes	object to this proposal at S422 as the impact on the same of open space on and around the marshes will be irrevocably disrupted, with a corresponding impact on the well-being of all the people who rely on the space as a source of mental and physical health, as backed up by many studies on the benefits of open outdoor green spaces in cities. Furthermore the development opens the door to continued development creep in the area, disrupting and damaging the fragile biodiversity that has long been fought for and protected by local residents.	I think the necessary modification is to further protect the site, and return it to marshland in order to improve local biodiversity, providing further green space for the well-being of Londoners and consequently reducing the pressure on public health services.	No		The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/unmoring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchment areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.

Amy Stary				S402- New Spitafields Market	Yes	No	Yes	The proposed site S402- New Spitafields Market is located on a known flood plain. If it is built on, this site will be there for many years to come. With more extreme weather, river and tidal rises that are predicted with climate change, there is a severe risk of flooding on this site. Should the London barrier ever fail, it is also at risk from tidal flooding. Therefore subject to the proposed plans for site S402, a building over 2,750 homes, with a predicted population increase of 5000-6000 people, on a known floodplain is unsound.	I would suggest that the site be returned to marshland in light of the flood risk this area is under, especially with the predicted changes that will occur in the coming years with climate change. The site as marshland has the potential to absorb rising levels of water (its estimated that 1 tree absorbs 11,000 gallons of water a year) and protect other areas of the borough from flooding, while also bringing as a site of biodiversity that marshland brings. Failing this, I suggest the site is left as it is, as a light industrial site where the risk of large loss of human life and property in the event of flooding is reduced.			Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.

The site as marshland has the potential to absorb rising levels of water (its estimated that 1 tree absorbs 11,000 gallons of water a year) and protect other areas of the borough from flooding, while also bringing as a site of biodiversity that marshland brings. Failing this, I suggest the site is left as it is, as a light industrial site where the risk of large loss of human life and property in the event of flooding is reduced.	No		Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainability benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site.
Ben Hathorley				S402- New Spitafields Market	Yes	No	Yes	The proposed site S402- New Spitafields Market is located on a known flood plain. If it is built on, this site will be there for many years to come. With more extreme weather, river and tidal rises that are predicted with climate change, there is a severe risk of flooding on this site. Should the London barrier ever fail, it is also at risk from tidal flooding. Therefore subject to the proposed plans for site S402, a building over 2,750 homes, with a predicted population increase of 5000-6000 people, on a known floodplain is unsound.	I would suggest that the site be returned to marshland in light of the flood risk this area is under, especially with the predicted changes that will occur in the coming years with climate change. The site as marshland has the potential to absorb rising levels of water (its estimated that 1 tree absorbs 11,000 gallons of water a year) and protect other areas of the borough from flooding, while also bringing as a site of biodiversity that marshland brings. 				S402- New Spitalfields Market	No Response	No	No	This plan will ruin the sanctuary that is Walthamstow marshes, also ridding it of lots of the wildlife homed here				The NPA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The local plan policy Biodiversity and Geodiversity will seek to protect and enhance biodiversity and geodiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green "buffers" and corridors, "wild" public amenity, green roofs and tree planting which will produce biodiversity net gain on site.
Skag				S402- New Spitalfields Market	No Response	No	Yes	This location is a haven for nature and families, walkers, dog walkers, bird watchers; it would ruin a very special place in London that keeps disappearing. We go there all the time and it is an absolute necessity for London to keep its nature spaces. This is not a viable place at all for more urbanisation. This is extremely concerning and unsound.	Not to build. Leave it as it is, its not because its nature that it needs to change or get rid of.			The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.
Oil Nyland				S402- New Spitalfields Market	Yes	No	Yes	The proposal is unsound because it reduces the function and openness of the Lee Marshes, which is intended to be a haven for wildlife. It may also have a negative impact of sound and light pollution.	The site should be left as it is or tower height be reduced.	No		The NPA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Local Plan requires that any new development must respect the amenity of existing residents and avoid harmful impacts from overlooking, enclosure, loss of privacy and loss of daylight/sunlight. The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.
Molly Flood				S402- New Spitalfields Market	No	No	No	It ruins an outdoor space cherished and used by so many				The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. This response is noted.
Ratie				S402- New Spitalfields Market	Yes	No	Yes	Green spaces are essential for our mental health, and have given absolute joy over the last few years. By building on these green spaces, communities will be split up, less space to walk the dog, meet with friends or play sports with mates. It goes against everything that we NEED.	Either leave the land as it is, there is no need to disturb the biodiversity if the building has to happen, a modification would be to decrease the height of the building and remember that affordable housing is needed for the community, not people who build & move out within a couple of years. But first and foremost, the best "modification" would be to leave the land as it is. We need the marshland.	No		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.

If yes, please explain why?	Council's response
Hanslope Boat				S402- New Spitalfields Market	No	No	No	obed to the S402 plans, considering the pandemic, we all learnt how important green space is for mental health and well being. And the marshes have been used by people to get some space and exercise more now than ever. Many people have benefited greatly from accessing the marshes, particularly those without access to a garden. We also need to consider the environment, and building large complexes is anything but good for the environment. We need trees not concrete.	Modifications I suggest, is reintroduce marshes and trees, to help absorb some of the air pollution and provide vital green space for local citizens.		I would like to be kept informed as this proposal is so close to historic facilities, we as a family and community use on a very frequent basis.	The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
				S402- New Spitalfields Market	Yes	No	Yes	Access to greenery in the marshes has been one of the few consistent pleasant escapes possible to me in the last 2 years. This kind of access to nature is very rare in London and one of the reasons that made me want to live on this side of the borough. I believe that further grand scale constructions will further denature the space. Londoners need more green space and less speculative high-rises.	Respect the importance of the marshes as a key nature site in the life of East London residents. Keeping the marshes wild is the best option. Alternatively minimize as much as possible the impact of new constructions on the identity of the marshes, one of the rare steady accessible open spaces in a busy city, leaving it as a low rise and trusting nature to flourish.	Yes		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Reeta Nykanen				S402- New Spitalfields Market	Yes	No	Yes	London needs this green space	It should be kept as it is without tall buildings	No		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Savannah Whalley				S402- New Spitalfields Market	Yes	No	Yes	The marshes need to be protected as open green space just like Epping Forest is protect. If Waltham Forest Council understand the importance of green space to all members of the community, it is unfair and unsound that they want to implement developments that mean that some members of the community, who live in the south of the borough, will have their access to green space taken away from them or limited because of the proposed developments. It is unsound to have conflicting/uneven approaches to protecting green space in the north and the south of the borough. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes.	I suggest that the modification be that the site is kept as it is currently. The marshes cannot sustainably handle the impact of the proposed developments, and because of this the developments should not go ahead. By keeping the site as it is, as a light industrial site, this addresses Waltham Forest's need for employment sites. This is already a low rise employment site (Locally Significant Industrial Site) with good road (A12) connections with the potential to create good railway link to the site, with no residential neighbours. This is compatible with open green space, affording the same level of protection to the Marshes as Epping Forest, and would be a suitable modification.	No		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
C.G				S402- New Spitalfields Market	No	No	No	NO TO REDEVELOPMENT OF GREEN LAND	N/A	No		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.

				S402- New Spitalfields Market	No	No	No	This damages the quality of local public green space	Restrict building heights			The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Megan Bailey				S402- New Spitalfields Market	No	No	No	We need to protect the green spaces and the community.	Low rises would be a better compromise.		Because the green space we lose and enjoy is being compromised. We do not need city straggers towering above the marshes.	The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
				S402- New Spitalfields Market	No	No	No	It will destroy green spaces	To stop from going ahead	Yes		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
Eliza Malready-Carroll				S402- New Spitalfields Market	Yes	No	Yes	Throughout lockdown the marshes provided a haven for everyone in Hackney. To have that taken away from us will be very bad. In such a congested city, the marshes are an escape. It will disrupt the openness of the area and reduce biodiversity.	Make the towers much smaller or build them somewhere else			The local plan policy Biodiversity and Gooddiversity will seeks to protect and enhance biodiversity and gooddiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green "buffers" and corridors, "wild" public amenity, green roofs and tree planting which will produce biodiversity net gain on sites.
Nash Gayman				S402- New Spitalfields Market	No	No	No	Not enough consultation and insufficient impact assessment on the local flora and fauna and on the local population. Inequalities around access to open green space in the north part of the borough where Egging Forest is afforded greater protection than marsh land in the south which arguably has more unique flora and fauna	Lower rise accommodation might make them more sound and compliant but the risk of flooding remains a single reason not to proceed with any building that would be jeopardised in future	No		The local plan policy Biodiversity and Gooddiversity will seeks to protect and enhance biodiversity and gooddiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green "buffers" and corridors, "wild" public amenity, green roofs and tree planting which will produce biodiversity net gain on sites.
				S402- New Spitalfields Market	No Response	No	No	If irreversibly changes what is an important place for activities and getting close to nature. It is simply not acceptable to do this.	None.	No		This is noted. However, it is through the adoption of Local Plans, that the required level of development can deliver both the level of housing and infrastructure to meet the identified need in a planned and sustainable way. Without this in place, development would come forward in a piecemeal manner, which would not be able to secure the adequate levels of infrastructure needed to be truly sustainable.

Consultee	Consultee Organisation Details	Agent	Agent Organisation Details	Site Number	Legally Compliant	Sound	Duty to Cooperate	Comments detailing why the plan is not legally compliant, unsound or fails to comply with the Duty to Cooperate	Modification(s) you consider necessary to make the Local Plan legally compliant and sound, in respect of any legal compliance or soundness matters identified	Do you consider it necessary to participate in examination hearing session(s)?	If yes, please explain why?	Council's response
Madda Noun				S402- New Spitalfields Market	No Response	No	No Response	Protection of the local environment- The Hackney and Walthamstow Marshes as a safe haven for wildlife should be protected and no new developments that will impact on the local biodiversity should go ahead.		No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.
Nina Pearman				S402- New Spitalfields Market	Yes	No	Yes	While improving access to green sites in the borough and acknowledging the positive impact they have on people's well-being is welcome there appears to be inconsistencies in the approach taken by the council in the case of Hackney Marshes when compared with Epping Forest also in the borough. The latter is protected in legislation that stipulates 'mitigation of urban effects', while the current proposals leaves the Hackney Marshes open to devastating urban effects. The detrimental impact of increased footfall in the marshes was felt during the lockdown during the last two pandemic years and high pollution is clearly evident from the Tottenham developments at the other end and also evident in the Hackney Downs 'renewal' developments. Evidence in the area from other developments or temporary behavioural patterns demonstrate that the plans adversely impact the sustainability of the green spaces. Applying two different approaches to open spaces in the is unsound.	I propose a consistent approach to the protection of green spaces in the borough be applied. Limiting increase in number of people (including their pets and the ensuing lighting pollution) should be a key objective to protect the green spaces. Residential towers that substantially increase density and light pollution while simultaneously destroying the experience of open space by the site's existing users. The current proposal should be reframed so as to prioritise sustainability of the green spaces and not the view that developers will use to sell the flats in their blocks. The suggested modification I propose is to retain the site as is, supporting light industry that provides necessary employment to the borough, and have a plan that provides the same protection to the marshes as given to Epping Forest.	No	I consider this a significant issue that will impact my quality of life and the value of my property and importantly has high impact on my local community. I would like to be present and have the opportunity to voice my concerns and modifications.	The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.
Mi Victoria I M Low				S402- New Spitalfields Market	No Response	No	No Response	The planned development is right on the edge of Hackney marshes which we consider essential to maintain and protect for the benefit of the environment, plant and animal species and in doing so will help protect the health of everyone in London and especially people in Hackney and Leyton from the threat of global warming and pollution. The marshes are like a green lung that we will need in our resource depleted future. The high rise building will be an eyesore (just like the ones on the other side of Leabridge road by Leabridge station already are) and the increase in people, business activity will lead to a decrease in animal and insect populations which we necessarily rely on.	Ideally the project should be stopped completely, but especially the high rise part of it. The number of houses should be dramatically scaled back their roads in particular are already busy in this area and do not support an increase in cars and traffic. The best thing you could do is turn this area back into marshland. The next best thing would be to scale it back and turn it into a space that would support green initiatives such as more allotments, community allotments or forestry.	Yes		The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar).
Ellie Cross				S402- New Spitalfields Market	No	No	No	The plans to build on Walthamstow Marshes is another disregard and destruction of the natural landscape by building developers. The marshes is home to hundreds of animals, by building large rise on this land you will be disrupting all of the wildlife in this area. Furthermore, the marshes has been an escape for many, especially in these last couple years, with covid restrictions. It is not a derelict space, unvisited or uninhabited. With the state the world is in right now, we do not need more developments like this.	Find another area to build your high rise in.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements.
Elisabeth Ardian				S402- New Spitalfields Market	Yes	No	Yes	There needs to be a consistent approach to usage of open green spaces. It is considered essential to protect Epping Forest, why then is not essential to protect the Marshes? Any open green spaces must be protected for the long term and future generations and should be subject to the same legislation as Epping Forest.	The Marshes have provided sustainable spaces for wildlife and for the use of the local population and will be adversely affected by the proposed development. Hemmed in this area with high rise developments would permanently alter the nature of the Marshes. I see no reason why the current light industrial usage cannot be maintained as to reduce it would subsequently lead to less business and employment opportunities. This provides the same level of protection for the Marshes as is in place for Epping Forest.	No		The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar).
				S402- New Spitalfields Market	No	No	No Response	This is public marsh lands. Please leave London green for a population to enjoy. Every inch is getting developed- we have enough buildings. Your kids don't 'mature' at apartments.	Don't build.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar). This response is noted.

Consultee	Consultee Organisation Details	Agent	Agent Organisation Details	Site Number	Legally Compliant	Sound	Duty to Cooperate	Comments detailing why the plan is not legally compliant, unsound or fails to comply with the Duty to Cooperate	Modification(s) you consider necessary to make the Local Plan legally compliant and sound, in respect of any legal compliance or soundness matters identified	Do you consider it necessary to participate in examination hearing session(s)?	If yes, please explain why?	Council's response
Peter Mudge				SAC2- New Spitalfields Market	No	No	Yes	This site is adjacent to the open spaces of Hackney Marshes and the Old River Lea. If the development goes ahead it will lead to a huge increase in visitors to both areas, since they will be far more easily reached from the site than any other open space. There is a small protected nature reserve in the east corner of Hackney East Marsh, and the Old River Lea and both of its banks are a site of importance for nature conservation. Both of these areas would be ruined, not just by increased footfall (if both human beings and dogs) but also by increased filtering, noise and lighting. Tall buildings along the east side of Hackney Marshes will destroy the sense of openness of the marshes. This site is a considerable distance from any other residential area, therefore it will require a whole range of facilities (shops, surgeries, schools, public transport, etc.) to be viable, and will increase or dependancy. The plans are based upon out-of-date assumptions about population growth. Current estimates of population growth are much lower. The need to protect Epping Forest from the adverse effects of development have been acknowledged by Waltham Forest Council. The need to protect the Lea Valley is even greater, because it is closer to central London.	Keep the site as a light industrial area. There is a shortage of such sites in this part of the borough. It is well connected to both the rail and motorway network.	Yes	-	The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
Sarah Venugopal				SAC2- New Spitalfields Market	Yes	No	Yes	I believe that the plans endanger the biodiversity and natural habitat of the Marshes at a time when this has never been more important to protect. I believe that the proposals do not provide affordable housing as one bedroom flats are not sustainable options and those that can afford to buy in the first place will buy to leave.	To abolish the plan completely and not build on wild land. I am disappointed and disgusted that the plans are not to expand the marshes given their role in biodiversity and climate protection. At minimum the height of the developments must be reduced.	No	-	The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
Oliver Smith				SAC2- New Spitalfields Market	Yes	No	Yes	Epping forest is protected from development and I see no reason why marshes should also be afforded similar protections as both offer open space and natural environment which is good for everyone. It is wrong to be inconsistent in the approach to two very similar areas.	There should be consistency across development in the borough. Any plans that are likely to damage the green spaces we have should be modified and the area left as is.	No	-	The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
Martin Nash				SAC2- New Spitalfields Market	Yes	No	Yes	The Marshes are a rare space in London of epic natural beauty. This development threatens everything that makes them so special.	Leave the site as it is or to reduce the height of the towers.	No	-	The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
Maria O'Brien				SAC2- New Spitalfields Market	No	No	No	It is removing the last patch of local green space, there is no need for this to be built.	Save the green space	No	-	The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar)
-				SAC2- New Spitalfields Market	No	No	No	The area is already lacking of trees, and polluted, I dont see how this could make it better.		No	-	The Local Plan requires that developments must retain and protect significant existing trees. They should take account of existing trees and retain where possible.

Julian Cheyne				S403 - Auckland Road LPS	No	Response	No	<p>Auckland Road</p> <p>Another development with tall buildings of up to 18 storeys which will have a negative impact on the visual amenity of those using nearby open spaces and allotments.</p> <p>The site allocation document provides little specific information on what is intended for this site. To do that it is necessary to look at the Draft Dayline study. This hardly seems fair as many people will have no idea of the existence of this document.</p> <p>Thus, for example, the Draft Dayline study refers to the need to take account of impacts on MCL. The development will do harm and is therefore not compliant with policy.</p> <p>This site allocation will add to the cumulative pressures on open spaces in terms of both population and the visual impact, a string of developments from New Spitalfields to the west of Auckland Road, the Score Centre, the Star Works tower, the Motion tower, the Lea Bridge Station tower, the Low Hall Depot tower or towers and further towers further north will line the Marshes on this east side in what is already the most densely populated and deprived part of the Borough.</p> <p>This part of Waltham Forest, the most densely populated and deprived part of the Borough is facing over development as a result of this and other site allocations.</p> <p>As is often repeated in Dayline studies this site is referred to as a gateway site. As has been stated elsewhere there is no need to mark these supposed gateways or arrival sites with tall buildings. Beautiful trees or murals would be suitable territorial markers, particularly in a Borough using a tree as its</p>	<p>Modification</p> <p>This site should continue as a light industrial, commercial site. Employment sites are needed in Waltham Forest and such a development will be more compatible with its neighbours and will not be harmful to the Marshes. Protection of green open spaces is required by policy. This part of the Borough is already densely populated and deprived by comparison with other parts. Development should be reduced in this area. Any housing on this site should be medium or low rise with a reduced population to prevent harm to local green open spaces which will be even more important as population increases.</p>	Yes	<p>I am a member of Save the Marshes and am concerned for the future of open spaces in this part of London</p> <p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>Through the evidence published in the Character Intensification Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>This response is noted.</p>	
Rosalyn Bibbrough				S403 - Auckland Road LPS	Yes	No	Yes	<p>Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and" mitigate for urban effects to ensure no adverse effects on the Epping Forest SAC. However, to the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes and smaller scale parks such as Pocket Park that will be destroyed in this construction. To have two different approaches to the protection of green spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes and pocket park. Pocket park hosts over 100 trees and its destruction will increase the likelihood of flooding in the area should the River Lea level therefore its lack of protection with the marshes, compared to Epping Forest is unsound.</p>	<p>The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of parts, lighting pollution and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, when the Marshes and Pocket Park are, then the development should be refused. These sites are harmful as they will undoubtedly lead to a line of towers along the east side of the Marshes and further destruction of local green spaces. I suggest the modification that this site be kept as it is, that ground Way Pocket Park is retained. The number of units and the size of the towers should be significantly decreased, to reduce population pressure on a vulnerable natural area that cost about £. The figures quoted for population increase are in line with pre-pandemic and pre-Forest statistics, which while understood are the official figures, it is clear that population increase at this scale will not happen in the next 10 years, therefore the modifications suggested are sound.</p>	No	<p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC)</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lea Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough, ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchment areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p>

Aligail Woodman				S405 - Lea Bridge Gas Holders	Yes	No	Yes	<p>I welcome Waltham Forest Councils commitment to protecting Metropolitan Open Land (MOL) in the borough. Open green spaces are essential for physical and mental health and wellbeing, and it's very heartening to see that there are no proposals for developments on MOL. It must be said, however, that numerous tall developments in Leyton and Lea Bridge, including this development, will affect the openness of MOL, a characteristic of MOL that must be protected.</p> <p>Furthermore, the habitats of the marshes "Walthamstow Marsh (as SSS), Leyton Marsh and Hackney Marshes" must be protected from the damage caused by an increase in the number of people, an increase in the number of jobs and an increase in lighting and so on. If Egging Forest SAC is deemed worth of protection from development in this site allocations document, so should our equally important green spaces flanking the west of the borough. To do otherwise is inconsistent and, thus, unsound.</p> <p>Covertly argued objections from local people to this development have been ignored, which is at odds with Waltham Forest Councils claim to want to "promote the right development in the right place at the right scale, creating attractive sustainable neighbourhoods. There is something deeply unethical about a policy that purports to create attractive and sustainable neighbourhoods but will, in practice, destroy what those already living in those neighbourhoods consider attractive and damage nearby habitats.</p>	<p>The local plan for Waltham Forest must acknowledge that limiting development particularly limiting the height of buildings" is essential if the character of the borough is to be preserved, and if existing communities are to be respected and not destroyed.</p>	Yes	<p>The local plan is focused on people and development and it is essential that the needs of the environment and wildlife are fully represented.</p> <p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Clare Weiss				S405 - Lea Bridge Gas Holders	No	No	No	This site allocation has already been agreed and permission given for development of contaminated land without providing an appropriate Health & Safety plan.	Provide nationally recognised independent air quality monitoring involving residents.		The plans for the south of the borough are unprecedented and mark a significant change from the existing Local Plan yet some of the specifics are already being committed to by developers and the Council.	The Local Plan will only support developments which have proposed mitigation measures to reduce the impact of land contamination on people and the environment, whilst the impact of development on sensitive receptors will be also carefully managed. In April 2020, The Council declared a Climate Emergency. Reducing private car travel will improve air quality by reducing air pollution. This will also be beneficial for the health of our residents. Most residential development within the Plan is car-free. Additionally, the Policies in Local Plan Part 1, ensure that development coming forward in the Borough meets and where possible improves air quality standards over its lifetime and does not contribute to a decrease in air quality during the construction or operation stage as a passive measure. To ensure that the level of growth planned in Local Plan Part 1 does not have any adverse effect on the Air Quality in the borough, The Council commissioned an Air Quality Study 2 as part of the evidence base. The approach has been to determine vehicle trip generation and distribution for each site allocation, without and with the Local Plan, and the expected net change in AADT (Average Annual Daily Trips) on roads within 200m of the Epping Forest Special Area of Conservation. The changes have been determined with full Local Plan implementation (The Local Plan scenario) and for each year between 2022 and 2038. In addition, a Sensitivity Test was undertaken to assess the potential implications should higher levels of car parking be permitted within the New Public Transport Accessibility Level (NPAL) areas of the North of the Borough and coverage of Controlled Parking Zone's (CPZ) are not extended to cover the whole of the borough. Therefore, it is considered to represent a worst case scenario of development being delivered without any further policies constraints on vehicle use being delivered through the Local Plan. One of the key conclusions of the report was the net reduction in overall traffic on most of the borough's roads in the Local Plan period.
Isahn Cheyne				S405 - Lea Bridge Gas Holders	No Response	No	No Response	This site has already been granted permission which has further caused over development in the already densely populated and deprived southern part of the Borough. The site allocation provides little detailed information on what is to happen on this site. For example it does not provide detail of the height of the towers. This requires sight of the Draft Skyline Study. Waltham Forest repeats similar themes in the Draft Skyline study for this site. The site allocation will do harm to nearby open spaces. Waltham Forest does not properly consider these harms. For example, the study refers to views of open spaces, not views from or impacts on open spaces despite reference to Metropolitan Open Land corridors. maximise opportunities for long distance views across the Leyton Jubilee Park to the Lee Valley Regional Park. The illustrative scenario therefore sets a general shoulder height across the site of three to nine storeys, stepping up to potential taller buildings of 10 to 17 storeys (this study says 11 and 17 storeys) and a tall building of 18 storeys located towards the south of the site, maximising views across the green assets. These views favour the needs of developers, not those using the Marshes or other green spaces. The study repeats wayfinding or landmark justifications for tall buildings in residential developments which are not needed in this case.	Modification Over developing already densely populated and deprived areas should be avoided. Building densely populated sites and tall buildings near open spaces, especially when they have a cumulative effect on open spaces by being built near to or in a line with other towers, should be avoided. Green open spaces are essential for the health and well being of residents and should be protected from development which creates unsustainable population pressure and harms the visual amenity of these spaces.	Yes	I am a member of Save Lea Marshes and am concerned for the future of open spaces in this part of London	Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lee Valley Regional Park (Special Protection Area (SPA) and Ramsar) The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. The Local Plan states that the loss of existing social or community infrastructure will usually not be permitted unless there are adequate alternative facilities, it is no longer required or would not lead to a shortfall in provision.
Melie Rich				S405 - Lea Bridge Gas Holders	No Response	No	No Response	The area this is going to be attached to are small narrow busy roads already. This will impact these streets negatively. Traffic along the Lea bridge road is already horrendous with people queuing back. The area will be shadowed by eight high developments that are unnecessary.	No tower blocks. Houses would be much better suited here stopping cars in blocks of flats in small residential areas with roads that won't be able to handle the impact, the streets are quiet and not built for the amount of people	Yes		Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. As set out in the Local Plan, all new residential development within the borough is required to be car-free. Moreover, developers will have an obligation to incorporate provision for accessible cycle storage and Car Clubs within their proposals. These provisions are strategically designed to encourage and support sustainable and active transport, ultimately resulting in a noteworthy alleviation of congestion, parking problems and improve air quality. Additionally, Waltham Forest Waste and Recycling guidance for the developers sets out operational requirements and measures to enable safe, regular and easy refuse collections and to alleviate traffic congestion. Moreover, the Local Plan directs planned growth to previously developed sites that are currently under-occupied and tend to generate high numbers of private car/motorised vehicle trips. Redevelopment of these sites in accordance with Local Plan policies should significantly reduce vehicle traffic across the borough.

Sam Benjamin				S405 - Lea Bridge Gas Holders	No Response	No	No	No Response	Residents are very concerned about the toxic pollution this will generate in an area surrounded by schools.		No	-	In April 2019, The Council declared a Climate Emergency. Reducing private car travel will improve air quality by reducing air pollution. This will also be beneficial for the health of our residents. Most residential development proposed within the Plan is car-free and employment development is car capped. Additionally, the Policies in Local Plan Part 1, ensure that development coming forward in the borough meets and where possible improves air quality standards over its lifetime and does not contribute to a decrease in air quality during the construction or operation stage as a passive measure.
Simon Rex				S405 - Lea Bridge Gas Holders	No	No	No	No	The plan has been given permission without a completed H&S plan which will protect neighbours from toxic releases. There is no system for benchmarking air quality before the scheme starts and no system for independent monitoring. This despite the developer's track record of failing to control toxic releases. There is no system in place for monitoring toxic build up in neighbouring homes nor any assessment nor reporting system for compound environmental stresses, which will exacerbate toxic impact. The developers have been using Clementina Estate roads to facilitate their construction despite a provision that they should not. Nothing has been done to stop this.	We demand to see the H&S plan and have it independently assessed before the scheme is allowed on site. We demand benchmarking, independent monitoring inside and outside homes and consideration of compound stressors in the H&S plan.	No	-	The site should not be developed unless and until the H&S issues have been satisfactorily resolved and there is oversight which is independent of both the developer and the Council. The Local Plan will only support developments which have proposed mitigation measures to reduce the impact of land contamination on people and the environment, whilst the impact of development on sensitive receptors will be also carefully managed.
											Yes

Francisco Babolin				S405 - Lea Bridge Gas Holders	Yes	Yes	Yes					This response is noted.	
				S405 - Lea Bridge Gas Holders	No	No	No			No		This response is noted.	
Paul Robert Treacy				S405 - Lea Bridge Gas Holders	No	No	No	do not trust this developer after what has happened at their southbit development	lower towers, more environmental investigations regarding the decontamination of the gasworks/colt			This response is noted.	
G M Ford				S405 - Lea Bridge Gas Holders	Yes	Yes	Yes			No		This response is noted.	
Nicola Morrison				S406 - Lea Bridge Station Site	No	No	No	Because of the impact on MCL this is not a legally compliant proposal. The proposal make a mockery of Waltham Forests declaration of a Climate Emergency. They ignore the reality of heavily trafficked crossroads which renders this an inappropriate place to site these new developments. Lea bridge road has an abundance of existing commercial property - some of which has lain empty for a considerable amount of time already, the demand is not there. The issues of the flood plan are not dealt with in a meaningful manner by this proposal. This consultation has not been widely advertised to those who use the area (but do so for very close by or receive council emails). Where are the posters to let people who travel through Lea Bridge know what is being proposed? The council has already pushed ahead with building a huge new car park further up the road which unnecessarily encroaches on to the marshes. There seems to be no care given to environment for wildlife or human inhabitants. Too many tall towers create wind tunnels and discourage people from walking. The pocket park on orient way corner has been intentionally run down to make it unattractive - the park should be retained and improved for residents. Adding new trees is in no way an effective remedy for removing so many mature trees. The connection between Clara Coghill as the former leader of the council and Square Roots developers is an area of concern.	The consultation needs to be adapted to be more user friendly - the language and format will put a lot of people off. It is not accessible to many residents for that reason and gives the impression the council do no really want responses. The terminology and format is likely to intimidate people who do not work in planning (i.e most local residents). The MCL issues need to be taken into consideration - they are not properly addressed or concerns allayed. Preserving existing green space and trees should take priority in line with the council's own declared Climate Emergency. Any connections there may be between Coghill now working for the developer and this being pushed through need to be investigated in order to give the public confidence in their elected officials and the process.		No		In April 2019, The Council declared a Climate Emergency. In the chapter in Local Plan Part 1 entitled Addressing the Climate Emergency, The Council sets out a strategic objective to build the borough's climate change resilience by targeting net-zero carbon emissions by 2030. This will be achieved by delivering more energy efficient development that is constructed to a more sustainable design and where possible connect, whether it is new build or the retrofitting of existing property, reducing the dependency on cars by encouraging modal shift to more active forms of transport such as walking and cycling, consuming less and recycling more which is inline with the GAs Circular Economy Statement and the promotion of nature, health and wellbeing by increase resilience against climate change conditions such as heatwaves and flooding. In order for a Local Plan Document to be adopted, it has to be found "sound" through the Local Plan Examination in Public which is a process undertaken by independent Planning Inspectors appointed by the Secretary of State. The Inspectors need to be satisfied that in the examination that the Local Plan meets the four soundness tests which are: Positively Prepared This means that the Local Plan should be based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development. The National Planning Policy Framework (NPPF) sets out principles through which the Government expects sustainable development can be achieved. Justified This means that the Local Plan should be based on a robust and credible evidence base involving: - Research/fact finding, the choices made in the plan are backed up by facts. - Evidence of participation of the local community and others having a stake in the area, and The Local Plan should also provide the most appropriate strategy when considered against reasonable alternatives. These alternatives should be realistic and subject to sustainability appraisal. The Local Plan should show how the policies and proposals help to ensure that the social, environmental, economic and resource use objectives of sustainability will be achieved. Effective This means the Local Plan should be deliverable, requiring evidence of: - Sound infrastructure delivery planning. - Being on regulatory or national planning barriers to delivery. - Delivery partners who are signed up to it, and - Evidence with the strategies of neighbouring authorities, including neighbouring marine planning authorities. - The Local Plan should be flexible and able to be monitored. The Local Plan should indicate who is to be responsible for making sure that the policies and proposals happen and when they will happen. The plan should be flexible to deal with changing circumstances, which may involve minor changes to respond to the outcome of the monitoring process or more significant changes to respond to problems such as lack of funding for major infrastructure proposals. Although it is important that policies are flexible, the DPD should make clear that major changes may require a formal review including public consultation. Any measure which the Council has included to make sure that targets are met should be clearly linked to an Annual Monitoring Report. Consistent with National Policy and in general conformity with the London Plan.

If yes, please explain why?	Council's response	
Ashleigh Lawson				S405 - Lea Bridge Station Site	Yes	No	Yes	The proposed development at S405 - Lea Bridge Station will put high population pressure on the surrounding marshland. In the planning proposals, there is absolutely no mention of the impact thousands of new residents will have on the Marshes and the surrounding areas. This population increase will in turn increase congestion, air, noise and light pollution on the vulnerable marshland area it sits besides. The Highway side of the Old River Lea being a Site of Importance for Nature Conservation (SINC), yet there is no adequate mention of this conservation status in the proposal as there is around the Epping Forest area. This use of this site to house thousands of people is putting high population pressure on a vulnerable SINC that will not be able to withstand the weight of increased pollution, congestion and population density. Therefore I object to this proposal as it is unsound. In addition to this, the destruction of Pocket Park will put further population pressure on the marshes as local residents will not have another green space they can spend time and walk dogs in. Due to unsustainable population pressure, these plans are unsound.	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of cars, lighting and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, as in the case of the Marshes and Pocket park were if it destroyed, then the development should be refused. I suggest that Orient Way Pocket Park be retained. A second modification suggested is the number of units and the size of the towers should be significantly decreased, to reduce population pressure on the surrounding marshland area that can absorb it. The figures quoted for population increase are in line with pre-pandemic and pre-Brexit statistics, which while I understand are the official figures, yet it is clear that population increase at this scale will not happen in the next 10 years, therefore these modifications suggested are sound.	No		The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. Through the evidence published in the Character Interference Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development by infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lea Valley Regional Park (Special Protection Area (SPA) and Ramsar). The allocation of this site requires the creation of high quality green space. In order for a Local Plan Document to be adopted, it has to be found "sound" through the Local Plan Examination in Public which is a process undertaken by independent Planning Inspectors appointed by the Secretary of State. The inspectors need to be satisfied that in the examination that the Local Plan meets the four soundness tests which are: Positively Prepared This means that the Local Plan should be based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unit requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development. The National Planning Policy Framework (NPPF) sets out principles through which the Government expects sustainable development can be achieved. Justified This means that the Local Plan should be based on a robust and credible evidence base involving: - Research/ fact finding, the choices made in the plan are based up by facts. - Evidence of participation of the local community and others having a stake in the area, and - The Local Plan should also provide the most appropriate strategy when considered against reasonable alternatives. These alternatives should be realistic and subject to sustainability appraisal. The Local Plan should show how the policies and proposals help to ensure that the social, environmental, economic and resource use objectives of sustainability will be achieved. Effective This means the Local Plan should be deliverable, requiring evidence of: - Sound infrastructure delivery planning. - Mitigation to regulatory or non-regulatory barriers to delivery.
Rosalyn Bingham				S405 - Lea Bridge Station Site	Yes	No	Yes	The proposed development at S405 - Lea Bridge Station will put high population pressure on the surrounding marshland. In the planning proposals, there is absolutely no mention of the impact thousands of new residents will have on the Marshes and the surrounding areas. This population increase will in turn increase congestion, air, noise and light pollution on the vulnerable marshland area it sits besides. The Highway side of the Old River Lea being a Site of Importance for Nature Conservation (SINC), yet there is no adequate mention of this conservation status in the proposal as there is around the Epping Forest area. This use of this site to house thousands of people is putting high population pressure on a vulnerable SINC that will not be able to withstand the weight of increased pollution, congestion and population density. Therefore I object to this proposal as it is unsound. In addition to this, the destruction of Pocket Park will put further population pressure on the marshes as local residents will not have another green space they can spend time and walk dogs in. Due to unsustainable population pressure, these plans are unsound.	The relationship between people and green spaces should be consistent across the borough. Effective This means the Local Plan should be deliverable, requiring evidence of: - Sound infrastructure delivery planning. - Mitigation to regulatory or non-regulatory barriers to delivery.
Lauren Parker-Mitchell				S405 - Lea Bridge Station Site	No Response	No	No Response	I think there are a collection of factors that present this as unsound. The addition of towers to this area will remove the openness of this area and it is not conceivable. Present planning application not compliant on affordable housing (do not think the way the consultation process was conducted was fair, its language was constructed to draw people to feel that by objecting they were being given areas and affordable housing. Increased population pressure. Destruction of pocket park flood risk. No mention of impacts on the Marshes increase in light pollution. Behaviour of people in towers does not indicate that people care outdoors so light will not be minimised. The height of the two towers on Site 1 and 2 are of concern in terms of their intrusion upon the open landscape character of the Regional Park and the current visitor perception of openness and removal from the surrounding urban area. Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes. To have two different approaches to the protection of green spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes. Congestion is also not going to be helped RAMSAR status needs to also be considered.	Reduce height of towers. Keep Pocket Park as I understand this was protected as part of the review of tree spaces in the Waltham Forest review.	No	I think it is important that the objections are not ignored and am willing to meet my own view to ensure the greater good of the area and the future surrounding.	The Local Plan requires that all new development should protect and enhance biodiversity in the Borough as well as maximising opportunities to make improvements. Through the evidence published in the Character Interference Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development by infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The consultation was carried out in accordance with the regulations in the Town and Country Planning Regulations 2012 and in accordance with the Council's Statement of Community Involvement. This document was published for draft consultation between October - December 2020. During this time there were several in-person engagement events held at various locations in the borough. During this pre-submission consultation, there was a spike in the number of Covid-19 cases. For the safety of our residents and officers, the Council took the decision to hold all engagement events online. Responses to Local Plan consultations have always been welcome either through the online portal or by email and post. Through the evidence published in the Character Interference Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development by infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. As set out in the Local Plan, all new residential development within the borough is required to be car-free. Moreover, developers will have an obligation to incorporate provision for accessible cycle storage and Car Clubs within their proposals. These provisions are strategically designed to encourage and support sustainable and active transport, ultimately resulting in a network of cycle storage, parking provisions and improve air quality. Additionally, Waltham Forest Waste and Recycling department will also provide operational requirements and measures to enhance safe, regular and easy refuse collections and to alleviate traffic congestion. Moreover, the Local Plan directs planned growth to previously developed sites that are currently under-utilised and land to generate high numbers of private car/motorised vehicle trips. Redevelopment of these sites in accordance with Local Plan policies should help to reduce vehicle traffic across the borough. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC). Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainable benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. The Local Plan requires that any new development must respect the amenity of existing residents and avoid harmful impacts from overlooking, enclosure, loss of privacy and loss of daylight/sunlight.
Tony Wragg				S405 - Lea Bridge Station Site	Yes	No	Yes	Waltham Forest Council rightly acknowledges that access to green spaces, particularly open green spaces, is essential for physical and mental health and wellbeing. In the north of the borough, developments must be designed to "minimise access to Epping Forest and "mitigate for urban effects to ensure no adverse effect on the Epping Forest SAC. However, in the south of the borough, access to the marshes is being used to support intensive development. Protecting Epping Forest is essential, but it is also essential to protect the marshes and smaller scale parks such as Pocket Park that will be destroyed in this construction. To have two different approaches to the protection of green spaces in the borough is unsound. While protecting Epping Forest SAC is driven by legislation, there is no reason why the same approach cannot be taken towards the marshes and pocket park. Pocket park hosts over 100 trees and its destruction will increase the likelihood of flooding in the south of the River Lea level therefore the lack of protection with the marshes, compared to Epping Forest is unsound. The tall towers proposed and the huge population increase this will bring to the area will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has a duty to protect and enhance green spaces. It rightly acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed by over 1000 clinical studies in the last 5 years alone. The Lea Valley Regional Park Authority (LVRPA) has said these towers are a concern in terms of their intrusion upon the open landscape character of the Regional Park and the current visitor perception of openness and disconnection from the surrounding urban area. It has also said these towers will generate a regular and sustained increase in footfall to the Park, which is clear this vulnerable marshland area cannot absorb. The open green space of the Marshes has been a source for so many of our local residents. Continued good mental health	The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which will cause damage by an increase in the number of people, in the number of cars, lighting, pollution and the impact of tall buildings. If the green spaces near to a proposed development cannot sustainably absorb the impacts of the development, as in the case of the Marshes and Pocket park were if it destroyed, then the development should be refused. These areas are harmful as they will undoubtedly lead to a line of towers all along the east side of the Marshes and further destruction of local green spaces. I suggest the modification that this site be kept as it. That Orient Way Pocket Park is retained. The number of units and the size of the towers should be significantly decreased, to reduce population pressure on the surrounding marshland area that can absorb it. The figures quoted for population increase are in line with pre-pandemic and pre-Brexit statistics, which while I understand are the official figures, yet it is clear that population increase at this scale will not happen in the next 10 years, therefore the modifications suggested are sound. The modifications I suggest are that the Orient Way Pocket Park be retained, in light of the clear benefits green space has on our mental, physical and social health. The benefits that trees and green space has on the local and wider community and the resultant services it takes (primary care services is obvious). This is particularly true in the south of the borough that is more deprived, with a clear link between lower levels of socio-economic status and reduced healthcare outcomes. A second modification suggested is the number of units and the size of the towers should be significantly decreased, to reduce population pressure on the surrounding marshland area that can absorb it. The figures quoted for population increase are in line with pre-pandemic and pre-Brexit statistics, which while I understand are the official figures, yet it is clear that population increase at this scale will not happen in the next 10 years, therefore these modifications suggested are sound.	No		The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC). The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lea Valley Regional Park (Special Protection Area (SPA) and Ramsar). The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Epping Forest Special Area of Conservation (EF SAC). The Local Plan policies aim to balance the need for housing and infrastructure with the preservation of green spaces and environmental assets. The highest level of protection is accorded to Ramsar sites, Special Protection Areas (SPA), Special Areas for Conservation (SAC) and Sites of Special Scientific Interest (SSSI) in the borough. There is a statutory requirement to ensure that development that goes ahead does not adversely affect them on the biodiversity or nature conservation value of any land or area with the identified Sites of Special Scientific Interest (SSSI), Sites of Importance to Nature Conservation (SINC), Special Areas of Conservation (SAC), Ramsar sites, or Special Protection Areas (SPA) can be secured. Through the evidence published in the Character Interference Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development by infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. Through the evidence published in the Character Interference Study, The Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in-keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development by infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. Having sites allocated for development ensures that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93 - Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exception test that there are wider sustainable benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that the development does not increase flood risk either on or off the site. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough. The Local Plan requires that developments must retain and protect significant existing trees. They should take account of existing trees and retain where possible.

Paul Bekking				S406 - Lea Bridge Station Site	No	Response	No	<p>It is inconsistent to seek to minimise access to Epping Forest in one part of the borough, as the council rightly does, and to protect proposals like this that will lead to over-use of the marshes. Orient Way Pocket Park hosts over 100 trees and its destruction will increase the likelihood of flooding in the area should the River Lea level rise, to its lack of protection with the marshes, compared to Epping Forest is unsound. The tall towers proposed and the high population increase this will bring to the area will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which will be backed up by over 1000 clinical studies in the last 5 years alone. The Lea Valley Regional Park Authority (LVRPA) has said these towers are of concern in terms of their intrusion upon the open landscape character of the Regional Park and the significant perception of openness and disconnection from the surrounding urban area. It has also said these towers will generate a regular and sustained increase in footfall to the Park, which is clear this vulnerable marshland area cannot absorb. The open green space of the Marshes has been a saviour for so many of us local residents. Continued good mental health and wellbeing has a direct impact on the NHS as it puts pressure on our vital resources. Yet their proposed tower blocks will completely destroy that. Therefore to bring forward these tower blocks and the destruction of Pocket Park, that are going to devastate the open space and biodiversity of the area is unsound and subject to these proposals.</p>	<p>I suggest the modification that this site be kept as it is, that Orient Way Pocket Park is retained. The number of units and the size of the towers should be significantly decreased, to reduce population pressure on a vulnerable natural area that cant absorb it. The figures quoted for population increase are in line with pre-pandemic and pre-pandemic statistics, which while I understand are the official figures, yet it is clear that population increase at this scale will not happen in the next 10 years, therefore these modifications suggested are sound.</p>	No		<p>The NHA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lea Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The Local Plan requires that developments must retain and protect significant existing trees. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>In order for a Local Plan Document to be adopted, it has to be found "sound" through the Local Plan Examination in Public which is a process undertaken by independent Planning Inspectors appointed by the Secretary of State. The Inspectors need to be satisfied that in the examination that the Local Plan meets the four soundness tests which are: Positively Prepared This means that the Local Plan should be based on a strategy which seeks to meet objectively assessed development and infrastructure requirements, including unmet requirements from neighbouring authorities where it is reasonable to do so and consistent with achieving sustainable development. The National Planning Policy Framework (NPPF) sets out principles through which the Government assesses sustainable development can be achieved.</p> <p>Justified This means that the Local Plan should be based on a robust and credible evidence base involving: - Research/ fact finding, the choices made in the plan are backed up by facts. - Evidence of participation of the local communities and others having a stake in the area, and - The Local Plan should also provide the most appropriate strategy when considered against reasonable alternatives. These alternatives should be realistic and subject to sustainability appraisal. The Local Plan should show how the policies and proposals help to ensure that the social, environmental, economic and resource use objectives of sustainability will be achieved.</p> <p>Effective This means the Local Plan should be deliverable, requiring evidence of: - Sound infrastructure delivery planning. - Being on regulatory or adoption/planning barriers to delivery. - Delivery partners who are signed up to it, and - Evidence with the strategic of neighbouring authorities, including neighbouring marine planning authorities.</p> <p>Justified The Local Plan should be feasible and able to be monitored.</p>
Laura Downing				S406 - Lea Bridge Station Site	Yes	No	Yes	<p>I object to the plan at S406 - Lea Bridge Station. The tall towers proposed and the high population increase this will bring to the area will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which will be backed up by over 1000 clinical studies in the last 5 years alone. The Lea Valley Regional Park Authority (LVRPA) has said these towers are of concern in terms of their intrusion upon the open landscape character of the Regional Park and the current outdoor perception of openness and disconnection from the surrounding urban area. It has also said these towers will generate a regular and sustained increase in footfall to the Park, which is clear this vulnerable marshland area cannot absorb. The open green space of the Marshes has been a saviour for so many of us local residents. Continued good mental health and wellbeing has a direct impact on the NHS as it puts pressure on our vital resources. Yet their proposed tower blocks will completely destroy that. Therefore to bring forward these tower blocks and the destruction of Pocket Park, that are going to devastate the open space and biodiversity of the area is unsound and subject to these proposals.</p> <p>In addition the building on a flood plain is very ill advised</p>	<p>I suggest the modification that this site be kept as it is, that Orient Way Pocket Park is retained. The number of units and the size of the towers should be significantly decreased, to reduce population pressure on the surrounding marshland area that cant absorb it. The figures quoted for population increase are in line with pre-pandemic and pre-pandemic statistics, which while I understand are the official figures, yet it is clear that population increase at this scale will not happen in the next 10 years, therefore these modifications suggested are sound.</p>	No		<p>The NHA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lea Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>Through the evidence published in the Character Interference Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. Daisy Hutchinson				S406 - Lea Bridge Station Sites	Yes	No	Yes	<p>Argument for importance of green space on mental health:</p> <p>object to the plans at S406 - Lea Bridge Station. The tall towers proposed and the huge population increase this will bring to the area will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which will be backed up by over 3000 clinical studies in the last 5 years alone. The Lea Valley Regional Park Authority (LVRPA) has said these towers are of concern in terms of their intrusion upon the open landscape character of the Regional Park and the current visitor perception of openness and disconnection from the surrounding urban area. It has also said these towers will generate a regular and sustained increase in footfall to the Park, which is clear this vulnerable marshland area cannot absorb it. The open green space of the Marshes has been a saviour for so many of us local residents. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks will completely destroy that. Therefore to bring forward these tower blocks and the destruction of Pocket Park, that are going to devastate the open space and biodiversity of the area is unsound and I object to these proposals.</p> <p>Argument for danger of construction on a Floodplain:</p> <p>The proposed site S406 - Lea Bridge Station is located nearby a known flood plain. If it is built on, this site will be there for many years to come. With some extreme weather, rise and tidal flows that are predicted with climate change, there is a risk of flooding on this site. Should the London barrier ever fail, it is also at risk from tidal flooding. Therefore object to the proposed plans for site S406 - Lea Bridge Station as construction on the floodplain of the Marshes is completely unsound.</p> <p>The open green space of the Marshes has been a saviour for so many of us local residents. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks will completely destroy that. Therefore to bring forward these tower blocks and the destruction of Pocket Park, that are going to devastate the open space and biodiversity of the area is unsound and I object to these proposals.</p>	<p>Argument for importance of green space on mental health:</p> <p>The modifications I suggest are that the Orient Way Pocket Park site be retained, in light of the clear benefits green space has on our mental, physical and social health. The benefits that trees and green space has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between lower levels of socio-economic status and reduced healthcare outcomes. A second modification suggested is the number of units and the size of the towers should be significantly decreased, to reduce population pressure on the surrounding marshland area that cant absorb it. The figures quoted for population increase are in line with pre pandemic and pre-great statistics, which while I understand are the official figures, yet it is clear that population increase at this scale will not happen in the next 10 years, therefore these modifications suggested are sound.</p> <p>Argument for danger of construction on a Floodplain:</p> <p>The modification I suggest is to retain Orient Way Pocket Park. Evidence shows that a single tree absorbs 1,100 gallons of water a year so, should flooding take place in this area, retaining the trees of Pocket Park will reduce property damage and potential loss of life to the surrounding residential areas. The height of the towers should also be lower so that the risk level of 26 storey high towers built on a floodplain is reduced.</p> <p>Argument for increased population and congestion to the area:</p> <p>The relationship between people and green spaces should be consistent across the borough. Green spaces should be protected from developments which increase population and congestion to the area. The Orient Way Pocket Park site must be retained, in light of the clear benefits green space has on our mental, physical and social health. The benefits that trees and green space has for the local wider community, the environment and indeed the air quality AND the localised pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between lower levels of socio-economic status and reduced healthcare outcomes.</p>	No		<p>Through the evidence published in the Character Intensification Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p> <p>The NPA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lea Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest, these policies focus to improve active and sustainable transport choices across the Borough ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchment areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>The allocation of this site requires the creation of high quality green space.</p> <p>Housing sites allocated for development that demonstrate that they demonstrate that flood risk has been successfully managed by following the process set out in Local Plan Part 1, Policy 93. Managing Flood Risk. This ensures that development at all site allocations passes the Sequential Test or that it can be demonstrated through the exemption 'led' that there are wider sustainable benefits to the community that outweigh flood risk and that that flood risk can be successfully mitigated against for the lifetime of the development and that development does not increase flood risk either on or off the site.</p> <p>As set out in the Local Plan, all new residential development within the borough is required to be car-free. Moreover, developers will have an obligation to incorporate provision for accessible cycle storage and Car Clubs within their proposals. These provisions are strategically designed to encourage and support sustainable and active transport, ultimately resulting in a more healthy and active population. Moreover, the Local Plan sets out operational requirements and measures to ensure safe, regular and easy route collections and to alleviate traffic congestion. Moreover, the Local Plan directs planned growth to previously developed sites that are currently under-utilised and tend to generate high numbers of private car/motorised vehicle trips. Redevlopment of these sites in accordance with Local Plan policies should significantly reduce vehicle traffic across the borough.</p>
Melanie Saltberry				S406 - Lea Bridge Station Sites	Yes	No	Yes	<p>object to the plans at S406 - Lea Bridge Station. The tall towers proposed and the huge population increase this will bring to the area will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which will be backed up by over 3000 clinical studies in the last 5 years alone. The Lea Valley Regional Park Authority (LVRPA) has said these towers are of concern due to their intrusion upon the open landscape character of the Regional Park. This wonderfully diverse but vulnerable marshland area will not be able to absorb anything in the way that makes it a unique, vital for our environment and indeed for us living locally.</p> <p>The open green space of the Marshes has been a saviour for so many of us local residents. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks will completely destroy that. Therefore to bring forward these tower blocks and the destruction of Pocket Park, that are going to devastate the open space and biodiversity of the area is unsound and I object to these proposals.</p>	<p>Argument for importance of green space on mental health:</p> <p>The modifications I suggest are that the Orient Way Pocket Park site be retained, in light of the clear benefits green space has on our mental, physical and social health. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest.</p> <p>The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lea Valley Regional Park (Special Protection Area (SPA) and Ramsar)</p> <p>Through the evidence published in the Character Intermittency Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured.</p> <p>The allocation of this site requires the creation of high quality green space.</p> <p>The local plan policy Biodiversity and Geodiversity will seek to protect and enhance biodiversity and geodiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green 'buffers' and corridors, 'wild' public amenity, green roofs and tree planting which will produce biodiversity net gain on site.</p> <p>The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.</p>
	Victoria Sheehan			S406 - Lea Bridge Station Site	Yes	No	Yes	<p>I object to the plans at S406 - Lea Bridge Station. The tall towers proposed and the huge population increase this will bring to the area will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 1000 clinical studies in the last 5 years alone. The Lea Valley Regional Park Authority (LVRA) has said these towers are of concern in terms of their intrusion upon the open landscape character of the Regional Park and the current visitor perception of openness and disconnection from the surrounding urban area. It has also said these towers will generate a regular and sustained increase in footfall to the Park, which is clear this vulnerable marshland area cannot absorb. The open green space of the Marshes has been a saviour for so many of us local residents. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks will completely destroy that. Therefore to bring forward these tower blocks and the destruction of Pocket Park, that are going to devastate the open space and biodiversity of the area is unsound and I object to these proposals.</p>	<p>The modifications I suggest are that the Orient Way Pocket Park site be retained, in light of the clear benefits green space has on our mental, physical and social health. The benefits that trees and green space has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between lower levels of socio-economic status and reduced healthcare outcomes. A second modification suggested is the number of units and the size of the towers should be significantly decreased, to reduce population pressure on the surrounding marshland area that can't absorb it. The figures quoted for population increase are in line with pre-pandemic and pre-war statistics, which whilst understandable are the official figures, yet it's clear that population increase at this scale will not happen in the next 10 years, therefore these modifications suggested are sound.</p>			<p>Through the evidence published in the Character Intermittency Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. Camilla Wilson				S406 - Lea Bridge Station Sites	No			I object to the plans at S406 - Lea Bridge Station. The tall towers proposed and the huge population increase this will bring to the area will completely destroy the sense of open green space and biodiversity that the Marshes have, that is so unique in London. Waltham Forest has said it wants to protect and enhance green spaces. It acknowledges the importance of open green space and biodiversity for our mental and physical health, which is well backed up by over 1000 clinical studies in the last 5 years alone. The Lea Valley Regional Park Authority (LVRA) has said these towers are of concern in terms of their intrusion upon the open landscape character of the Regional Park and the current visitor perception of openness and disconnection from the surrounding urban area. It has also said these towers will generate a regular and sustained increase in footfall to the Park, which is clear this vulnerable marshland area cannot absorb. The open green space of the Marshes has been a saviour for so many of us local residents. Continued good mental health and wellbeing has a direct impact on the NHS as it puts less pressure on our vital resources. Yet these proposed tower blocks will completely destroy that. Therefore to bring forward these tower blocks and the destruction of Pocket Park, that are going to devastate the open space and biodiversity of the area is unsound and I object to these proposals.	The modifications I suggest are that the Orient Way Pocket Park site be retained, in light of the clear benefits green space has on our mental, physical and social health. The benefits that trees and green space has for the local and wider community and the resultant pressure this takes off primary care services is evident. This is particularly true in the south of the borough that is more deprived, with a clear link between lower levels of socio-economic status and reduced healthcare outcomes. A second modification suggested is the number of units and the size of the towers should be significantly decreased, to reduce population pressure on the surrounding marshland area that can't absorb it. The figures quoted for population increase are in line with pre-pandemic and pre-war statistics, which whilst understandable are the official figures, yet it's clear that population increase at this scale will not happen in the next 10 years, therefore these modifications suggested are sound.	No		Through the evidence published in the Character Intermittency Study, sites that are appropriate for development that have the potential for delivering tall and taller buildings have been identified through the Site Allocations process. The need established in policies in Local Plan Part 1 sets out that development that includes tall and taller buildings is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The Borough's Local Plan has policies to improve health and wellbeing of all the people who live, study and work in Waltham Forest. These policies focus to improve active and sustainable transport choices across the Borough/ensuring sufficient availability of recreational spaces, both indoor and outdoor sports facilities, parks, and green areas. Additionally, the plan emphasises the provision of GP practices and other health care facilities within walking distance to the residential catchments areas. Moreover, the plan aims to offer healthy food choices that cater to the diverse needs of the community. Overall, the focus is on creating a healthier and more vibrant living environment for all sections of the population in Waltham Forest. The HRA for this document concludes that, with the measures put in place through the Local Plan, there will be no adverse effects on the Lea Valley Regional Park (Special Protection Area (SPA) and Ramsar). Through the evidence published in the Character Intermittency Study, the Local Plan policies have been prepared to ensure that on sites where higher density development growth needs to come forward, it can be delivered using a character-led approach to ensure it is in keeping with the character and context of the local area. The housing need established in policies in Local Plan Part 1 sets out that development at higher density is required on some sites identified within strategic locations such as town and district centres and in close proximity to transport hubs. Delivery of higher density development at these locations goes towards addressing the housing requirement and will also provide housing that allows people to live more sustainably by reducing the need to travel by car to meet their everyday needs. By identifying sites that have the potential to deliver at higher density in the preparation of the Site Allocations document (Local Plan Part 2) means that through development key infrastructure as identified in the Infrastructure Delivery Plan (IDP) can be secured. The allocation of this site requires the creation of high quality green space. The local plan policy Biodiversity and Geodiversity will seek to protect and enhance biodiversity and geodiversity resources throughout the borough. The allocation requires the enhancement of the existing resources, and the new development to integrate green 'buffers' and corridors, 'wild' public amenity, green roofs and tree planting which will produce biodiversity net gain on sites. The Borough's Local Plan has a policy on protecting and enhancing the environment has the objective of protecting, restoring and enhancing the Borough's natural environment. A further objective is to develop a multi-functional network of green and blue infrastructure, recognising the benefits this can bring for people and the environment. This policy will apply to all new development sites in the Borough.
