## **1.0 Introduction**

This document has been compiled in accordance with central Government requirements contained in the Winter Service Section of the current Well-Managed Highway Infrastructure, together with other various recommendations to deal with prolonged cold weather spells and associated risks.

The document also provides information on the procedures for dealing with winter weather conditions and provides a planned and coordinated response by the London Borough of Waltham Forest.

The borough also recognises its responsibilities to work with the Greater London Authority and other agencies to provide a pan London approach to keep London moving in difficult times.

Waltham Forest is a walking and cycle friendly borough, and this document is produced bearing that in mind.

This document is available to all to view or download from the London Borough of Waltham Forest web site.

## **2.0 Policy**

The aim of the Council's Winter Service Policy is to provide a consistent and well-coordinated service, which will promote the safe movement of public transport, vehicular traffic, cyclists and pedestrians around and through the borough, with the minimum of delay and disruption during adverse winter weather conditions.

The Council has the duty as the Highway Authority to comply with the requirement of the Highways Act 1980 Section 41(1A) to clear snow and ice from the publicly maintainable highway in times of significant snowfall so far as is reasonably practicable, so that safe passage along the highway is not endangered.

The Council will initially pre-treat areas and then, if necessary, continue to treat carriageways, footways and cycle lanes in the prioritised order described in this document using its available resources in an efficient manner.

## **3.0 Organisation and Preparation**

### **3.1 Winter Service Period**

For planning and operational purposes, the Winter Service Period for this season will be from 14<sup>th</sup> October 2024 to 14<sup>th</sup> April 2025 making 26 weeks in total.

### **3.2 Staffing Arrangements**

A Winter Service Controlling Officer (CO) will be available at all times during the Winter Service Period and will be responsible for receiving weather information, taking decisions and initiating the appropriate courses of actions for all Winter Service activities that occur during the period of duty.

The Duty Winter Service Officer will apply instructions of the Controlling Officer by the issue, recording and monitoring of work to the contractor, as necessary from the operating base at Low Hall Depot, Argall Avenue, E10 7AS.

The Highways Term Maintenance contractor will take instructions from the Duty Winter Service Officer and provide and manage all personnel necessary to carry out the winter service operations required.

At times of heavy and/or prolonged snowfall, additional staff that cannot carry out their normal duties through the Waste Contract will be made available to pre-grit, treat and clear footways.

### **3.3 Quality and Requirements**

All Council and contracting staff will be appropriately qualified, to carry out the duties required.

The Term Contractor will have sufficient resources available on a normal or stand-by basis to cover precautionary gritting actions within a total response and treatment time of three hours. The maximum response time to commence gritting shall be one hour.

At times of heavy and/or prolonged snow-fall continuous working may be required to keep the highway network open.

Definitions of the underlined terms are:

Normal: Operatives on duty during normal working hours either on the network or at the Depot.

Stand-by: Operatives available at the Depot within one hour of being called out from home or elsewhere.

Continuous: Operatives on duty based at the Depot in 8 hour shifts with a rota providing 24-hour operational function.

### **3.4 Weather Forecasting**

A weather forecast provider will be contracted to supply a tailored service for the winter service season which provides specific winter weather information.

The output from this service will provide: -

- **24 hour forecast** with updates at 11.00 17.00 21.00
- **2- 10-day rolling weather outlook**
- **Any flash weather warnings**

### **3.5 Base of Operations**

Winter Service operations will be undertaken from Low Hall Depot, South Access Road E17 8AX.

This Winter Service document is shared with Public Protection and Contingency Planning.

### **3.6 Gritting Materials**

The national minimum quantity of rock salt complying with BS3247 is stocked at Low Hall Depot for the commencement of this season will be 1750 tonnes. The stockpile is to be monitored during the season and replenished regularly to ensure adequate material availability throughout the winter period.

### **3.7 Gritting Equipment**

The fleet of gritting vehicles and other dedicated equipment initially available to the Term Highway Contractor for winter service operations is listed below and comprise of: -

- Three purpose built 18 tonne gritting vehicles
- One purpose built 6.5 tonne mini gritting vehicle
- Two snow plough attachments
- One mini liquid applicator tractor with power sweeper
- One mini grit spreader tractor with power sweeper
- Three demountable mini sweeper grit spreaders
- One loading shovel

The highways contractor also has access to further resources if required through other highways contracts under their control.

In support to the above, there are three Johnston 202 mechanised sweeping vehicles operated by the Waste Contractor that can be fitted with the gritting attachments above that can be brought into use on cycle ways and footways when weather conditions necessitate.

### **3.8 Grit Bins**

There are a number of grit bins placed around the borough. Historically these have been strategically placed following requests by residents to assist the community to deal with local trouble spots. The list of sites is shown in Appendix 6.6.

A policy has been introduced to ensure grit bins are prioritised for locations that present the highest risk during the Winter Service period. The policy is attached as Appendix 6.8

## **4 Decision Making Communications and Treatments**

### **4.1 Decision Making**

London Borough Waltham Forest extends over a diverse geographical area and it may not generally be appropriate to apply the same treatment decisions to the whole area.

On most days during the winter service period, following receipt of the morning and afternoon forecasts, the Controlling Officer will determine what winter service actions are required for the next 24-hour period, and record that decision.

The Duty Winter Service Officer will diligently monitor weather conditions as they form and take appropriate action in line with the decision or update the Controlling Officer if conditions deteriorate from the prediction. Details of all actions taken either verbally or otherwise are recorded for evidence.

Where possible a decision on gritting spread rates, timing of commencement, and routes to be covered will be normally made by 17.00 hours daily throughout the winter season.

The Controlling Officer will also keep the senior Councillors and Heads of Service informed of impending or on-going conditions that are likely to disrupt the highway network by email.

There will be occasions due to uncertain weather conditions when the decision on the appropriate course of action would be best left until the evening. On these occasions the contractor will be informed of the "Delayed Decision" and told when it is likely to be made.

Full use will be made of the weather service to determine the optimum time to commence precautionary gritting. However, on marginal nights the Duty Winter Service Officer may elect to carry out inspections before making final decisions. This will determine the surface road temperature, ambient road temperature, the residual salt present, and any other observations considered appropriate.

Under dry weather conditions it may not always be necessary to grit every time that below-zero weather conditions are forecast. In particular when there is enough residual rock salt on the road to deal with the expected conditions. Care will however be taken to treat known wet spots.

As there is no effective way to measure "residual" rock salt, a conservative approach will be taken, and pre-gritting will be carried out if any doubt exists.

In the event of hoar frost, black ice, or a forecast of freezing fog precautionary gritting will be carried out even if the roads are dry.

In the event of a forecast of rain followed by a frost the precautionary gritting will be delayed avoiding unnecessary rock salt wash away. Monitoring of

conditions and if necessary further treatments will be carried out as conditions dictate.

Gritting of any traffic routes will be carried out in the event of hoarfrost, freezing fog, or black ice that has not been forecast, unless thawing is likely before gritting can begin.

#### 4.2 Gritting Treatments

Neat rock salt will melt ice and snow at temperatures as low as  $-20^{\circ}\text{C}$  with continual traffic movement, but below  $-10^{\circ}\text{C}$  the amount of salt needed becomes environmentally undesirable. A spread rate of  $10\text{ g/m}^2$  will be effective to at least  $-5^{\circ}\text{C}$  and where traffic flow is heavy to  $-10^{\circ}\text{C}$ . Rock salt will therefore be applied at the target rates shown in the following table.

Weather Condition	Treatment	Target Rate of Spread
Light frost	Precautionary gritting	$10\text{ g/m}^2$
Hoar frost, light snow flurries and cold wet roads	Precautionary gritting	$15\text{ g/m}^2$
Persistent conditions below $-5^{\circ}\text{C}$	Gritting	$20\text{ g/m}^2$
Snow	Gritting with snow plough	$2 \times 20\text{ g/m}^2$
Ice already on roads	Gritting rock salt and grit mix	$2 \times 20\text{ g/m}^2$
Hard packed snow and ice	Gritting rock salt and grit mix with snow plough	$>2 \times 20\text{ g/m}^2$

The effectiveness of treatments on highways, footways and cycle routes will also depend on the amount of trafficking an area receives, and therefore other processes such as sweeping, ploughing and /or special liquid treatments are being used.

In exceptional circumstances, and if practical, highway ploughing will be considered and/or in addition with 6mm single size abrasive aggregate separately or mixed with the rock salt. This application is to assist traction but will not clear snow or ice. Its use will be discontinued as soon as possible to avoid blocking the highway drainage systems.

#### 4.3 Road Condition Reports / Snow Action

When a snow warning is received precautionary gritting will be carried out on all Resilience Routes in priority order, and other roads and footways if practicable, at the discretion of the Controlling Officer.

#### 4.4 Snow Desk

When the weather forecast predicts prolonged or significant snowfalls the Controlling Officer will establish a Snow Desk at Low Hall Depot and organise a staff rota to deal with enquires from the public via the Customer Service Centre. Details of all actions taken in response to service requests will be recorded.

All such instructions will be fully recorded in the operational log with details of times of significant incoming issues and outgoing instructions on decisions made, noting what resources were utilised.

### 5.0 Winter Service Operations

#### 5.1 Priority Locations

Lists of prioritised site locations are shown in Appendix 6.

#### 5.2 Carriageway Pre-Gritting

It is this Council's Policy to pre-grit roads in priority order when wintery conditions are forecast. It is anticipated that carriageways and certain cycle routes and footways will be treated before the predicted frost or snow arrives. This work will usually be carried out at night after normal working hours.

#### 5.3 Carriageway Gritting Priorities

Dependent on the weather conditions predicted, carriageway gritting will be applied to the described network routes in the following priority order: -

- **Resilience Routes – (Highest Priority)**  
This will include: -
  - Special Sites - (e.g. hospitals, fire stations, bus garages and rail stations (where no other local arrangements are in place)
  - Hilly areas - (grouped by location)
  - Traffic routes - (principal routes grouped by location)
  - Bus routes
- **Local Distributor Routes – (2<sup>nd</sup> Highest Priority)**  
This will include: -
  - Borough Roads (secondary routes grouped by location not included above)
- **Other Routes – (3<sup>rd</sup> Highest Priority)**  
This will include: -
  - Minor Roads – (tertiary routes grouped by location not included above)

Notes: -

On-carriageway cycle routes will be included as part of any carriageway treatment carried out.

Resilience routes have been identified as causing specific issues in the past. Locations may be subject to alteration or deletion dependent upon the changes in traffic usage and flow.

Local Distributor and Other Routes will only be treated during times of exceptionally poor weather conditions, when resources are available, and the condition of higher priority routes will allow. Locations may also be subject to alteration or deletion dependent upon the changes in traffic usage and flow.

The majority of carriageway treatments will be carried out, using specialist gritting vehicles.

#### **5.4 Footway Pre-Gritting**

Footway pre-gritting will be limited to areas, where high volumes of pedestrian traffic are expected. These sites will be treated by hand propelled applicators on instruction from the Winter Service Duty Officer.

Cycle routes that are 'on-footway' may be treated separately.

Locations are shown in the Appendix 6 and have been identified as causing specific issues in the past. Locations may also be subject to alteration or deletion dependent upon the changes in pedestrian and cycle usage.

These areas will be treated by the Highways Term Contractor as part of the other evening pre gritting activities.

#### **5.5 Segregated Cycle Route Pre-Treatment**

Segregated cycle route pre-treatment will be limited to areas, where high volumes of cycling traffic are expected. These sites will be treated initially by mini liquid applicator or grit spreader tractors or by mini sweepers with demountable gritting units provided by the Waste Contractor on instructions from the Winter Service Duty Officer.

The general locations of Segregated Cycle Lanes are shown in the Appendix 6 and any treatment operations may be subject to a specific route direction dependent upon the weather prediction timing.

#### **5.6 Footway and Segregated Cycle Lane Snow Clearance / Post Gritting**

Following significant snowfall, it is assumed that the snowfall would disrupt the Waste Contractor's normal program of work, and that those operatives will become available to clear footways and segregated cycle lanes in a prioritised logical fashion as per the priorities set out in Appendix 6. It is expected that all waste team management facilities will operate to achieve the Councils Winter Service objectives.

Work on snow clearing will continue until temperatures rise allowing normal activities to resume.

Footway clearing will be applied to the following areas but in the priority order shown in the appendix expanding in area cleared on a daily basis subject to weather conditions and staff resources remaining stable.

- **Priority Sites and Public Amenity Areas**  
(where no other local arrangements are in place)
  - Bus garages
  - Bus and train station entrances
  - Entrances to hospitals
  - Fire stations
  - School
  - High-density pedestrian areas,
  - Secure cycle hubs
  - Local shopping areas
  - Segregated Cycle Routes
  - Main school entrances
  - Public buildings (Town Hall, Libraries etc.)
  
- **Footway Gradients**
  - Steep hills
  - Pedestrian crossing ramps
  - Cycle route transitions and crossings
  - Traffic controlled crossing points
  - Other pedestrian crossing points
  
- **Resilience Routes**
  - Footway sections not already cleared above
  -
  
- **Local Distributor Routes**
  - one side only
  
- **Other Routes**
  - one side only

Note: -

By reference to the priorities identified in this plan, it is not expected or the aim of the Council to be able to clear all the footpaths on every road in the Borough.

## 5.7 Snow Angels

The purpose of a Snow Angel is to minimise the impact of extreme weather against the well-being of the community in their local area, and in particular to help the vulnerable and the elderly. This will also help foster community spirit and pride.

For the Winter Season, the Council wishes to continue the initiative to have and maintain a core of around 1000 residents and Council staff as Snow Angel volunteers.

For further information about becoming a Snow Angel contact [snow.angels@walthamforest.gov.uk](mailto:snow.angels@walthamforest.gov.uk) or telephone 020 8496 3000.

All Snow Angels will be issued with:

- One large bag of grit
- Protective gloves
- Snow scoop or plastic shovel
- Snow Angel branded hi-vis vest

Material deliveries are targeted at specific times during the winter season, which will be determined for new recruits at the time of application.

There will only be one bag of grit issued per Snow Angel at the start of the winter season. Additional bags of grit may be delivered following a snow fall event where initial resources have been used as a result.

### LONDON BOROUGH OF WALTHAM FOREST WINTER SERVICE PLAN 2022/23

#### Footway Priority Sites and Public Amenity Areas for snow and ice clearance

Location:	Comments / Extent
<b>General:</b> Shopping areas, Bus Stations, Railway Stations, and other areas of high pedestrian or cycling use.	Snow Clearing and Gritting
<b>Leyton E10</b>	
Baker Arms Shopping area:	Including High Road E10, Hoe Street and Lea Bridge Road.
Church Road	Entrance to the Fire Station
Francis Road Shopping Area	Including the paved area between Albert Rd and Claude Rd
High Road Leyton	Entrance to Leyton Underground Station. Area adjacent to Leyton Midland Road Railway Station. Area adjacent to the Leisure Lagoon. Area adjacent to Leyton Municipal Offices. Area by steps to Leyton Yard Shopping Area.
Maud Road	Area at top of steps to Leyton Mills Shopping area
<b>Leytonstone E11</b>	
Church Lane Shopping Area	Including High Road Leytonstone, Kirkdale Road Bus Station, the entrance to Leytonstone Underground Station, and the Public Toilets
Grove Green Road	Bus Station and Entrance to Leytonstone Underground Station, and the shopping area

Car Park 5	Mission Grove (2 No)	E17	High Street
Car Park 6	Stanley Road	E17	Lea Bridge

## Appendix 6.8

### Waltham Forest Council Grit Bin Policy (Draft)

#### Grit Bin Provision

The Council will consider provision of a new grit bin when a number of criteria are met.

Key factors that are considered include:

- Highway gradient
- Highway safety
- Number of residents to benefit
- Distance to next grit bin
- Other factors; e.g. vulnerable residents; known water problems; junction problems; accident hotspot

Grit bins shall only be considered where at least one of the criteria in List A and all the criteria in List B are met:

**List A** (application must meet 1 or more of these criteria)

- Steep hill (determined on an individual basis);
- A junction with a known history of accidents;
- Known water problems e.g. run off from forest, etc.

**List B** (application must meet all criteria)

- ✓ Not on a primary or secondary gritting route;
- ✓ Must be for use on the public highway;
- ✓ The location shall not obstruct the passage of pedestrians: a minimum of 1.5m clearance on the footway is required;
- ✓ The location shall not obstruct sight lines;
- ✓ The location is not, normally, within 200m of another grit bin location;
- ✓ The location is within the boundary of the public highway;
- ✓ Can easily be accessed and filled by an HGV

#### Where grit bins will not be provided

The Council will not provide grit bins in private areas, private car parks or any other public or private property; such as schools, parks, hospitals, sheltered accommodation, or similar.

#### Location of grit bins

Grit bins will only be located where they can be easily accessed and filled.

Grit bins will be left in situ throughout the year.
